Publication Code: OW138
Service: Obligation Warehouse
Title: Obligation Warehouse User Guide

TABLE OF CONTENTS

1. ABOUT THIS USER GUIDE **8**

1.1 Revision History 8

2. COMMON CODES AND ACRONYMS **10**

3. GENERAL INFORMATION **12**

3.1 Scope of the Obligation Warehouse System 12
3.2 Basic Background 12
3.2.1 About the Depository Trust and Clearing Corporation (DTCC) 13
3.2.2 NSCC Guaranteed Services 13
3.2.3 NSCC Non-Guaranteed Services 13
3.2.4 DTC Settlement 13
3.3 Contact Us 14
3.4 Input Features 14
3.4.1 Post-Trade Processing of Transactions 15
3.4.1.1 Trade Capture 15
3.4.2 Clearance 15
3.4.3 ACATS 16
3.4.4 Obligation Warehouse 16
3.4.5 DTC Settlement: IMS, NYW, ESS 17
3.4.6 Settlement Away From DTC 17
3.5 Output Features 18
3.5.1 MQ Messaging 18
3.5.2 File Output 18
3.5.3 Obligation Warehouse Web 18

4. SYSTEM OPERATIONS **19**

4.1 Hours of Operations 19
4.1.1 Start of Day (SOD) 19
4.1.2 During a Business Day 19
4.1.3 Close of Business 19
4.2 Holiday Processing 20
4.2.1 NSCC Holiday, Where Banks are Open 20
4.2.2 Bank Holiday, Where NSCC is Open 21
4.2.3 Federal Holidays Where Both NSCC and Banks are Closed 21
4.3 System Set Up 22
4.3.1 Set Up for Message Queue (MQ) Messaging 22
4.3.1.1 Communication Set Up 22
4.3.2 Obligation Warehouse Web 22
4.3.2.1 Obligation Warehouse Web for Access Coordinators 22
4.3.2.2 Obligation Warehouse Web Access for Users 22
4.3.2.3 Obligation Warehouse Web Access for Account Level Pair Offs 23
4.4 Extension Guidelines 23

5. ELIGIBILITY FOR OBLIGATION WAREHOUSE **24**

5.1 NSCC Member Firms 24
5.2 Using Obligation Warehouse Web 24
5.2.1 Access Coordinators 24
5.2.2 Obligation Warehouse Web Users 24
5.3 Security Eligibility 24
5.3.1 CUSIP Requirements 25
5.3.1.1 Sub-Issue Type List 25
5.4 Types of Transactions 28
5.4.1 Ex-Clearing 28
5.4.2 Failed Obligations 28
5.4.3 Comparison Only Obligations 28

6. APPLICATION INPUT AND OUTPUT 29

6.1 Input Sources 29
6.1.1 Universal Trade Capture (UTC) 29
6.1.2 CMU RTTM 29
6.1.3 ACATS 30
6.1.3.1 Non-CNS ACATS Receive and Deliver Instructions 30
6.1.3.2 ACATS Exited From the New Settlement Process 30
6.1.3.3 ACATS Failed in the New Settlement Process 31
6.1.4 NSCC Balance Orders 31
6.1.5 CNS Exits 32
6.1.6 Input Methodology 32
6.1.6.1 Ex-Clearing 32
6.1.6.2 Fails 32
6.1.6.3 Comparison Only Submissions 32
6.2 Output Source 33
6.2.1 MQ Messages 33
6.2.2 AutoRoute Files 33
6.2.2.1 Intraday and End of Day Position Files 33
6.2.2.2 Intraday and End of Day Position File Layouts 33
6.2.2.3 Cash Adjustments for Mandatory Reorg. File 34
6.2.3 Obligation Warehouse Pair Off Activity MRO File 34
6.2.4 Obligation Warehouse Web 34

7. PROCESS RULES 35

7.1 Submitting Obligations 35
7.1.1 Mandatory Fields for Bilateral Submissions 35
7.1.2 Timing of Submissions for Matching 36
7.1.3 Retaining Uncompared Submissions 36
7.2 Uncompared Status (UNC) 36
7.2.1 Available Actions for Uncompared Submissions 36
7.2.2 Automated Actions Taken by Obligation Warehouse on Uncompared Submissions 37
7.3 Don’t Know (DK) Actions 38
7.3.1 DK Purge Rules 38
7.3.2 DK of Comparison (DKUC) Requests 38
7.3.3 DK of Cancel (DKCN) Requests 39
7.3.4 DK of Delivery (DKDL) Requests 39
7.3.5 DK of Reclaim (DKRC) Requests 40

7.4 Cancel Status (CANC) 41
7.5 Marked for Delete Status (MKDL) 41
7.6 Open Status 41
7.7 Open, Pending Acceptance (OPPA) 42
7.7.1 Automated Actions Taken by Obligation Warehouse on Obligations in Pending Statuses 42
7.8 Pending Cancel (PCAN) 42
7.9 Pending Cancel, Pending Acceptance (PCPA) 43
7.10 Closed Status (CLSD) 43
7.11 Reclaim, Pending Acceptance (RCPA) 44

8. STATUS AND RELATED ACTIONS 45

8.1 Obligation Status: Obligation Warehouse Web, MQ Messages, File Output 49

9. AUTOMATED FUNCTIONS 52

9.1 CNS Eligibility Check 52
9.2 Mandatory Reorganization Events 52
9.2.1 Mandatory Reorg Events Applied to ACATS Transactions in the Obligation Warehouse 53
9.2.2 Examples of Mandatory Reorg. Events in the Obligation Warehouse system 53
9.2.3 Other Corporate Action Events 55
9.3 RECAPS 56
9.4 Participant Swings 57
9.5 Administrative Action 57
9.6 Using Auto DOs 57
9.7 Pair Offs 58
9.7.1 Benefits of Pair Off Process 58
9.7.2 Pair Off Requirements 58
9.7.3 Pair Off Time of Execution 58
9.7.4 Pair Off Exclusions 59
9.7.5 Pair Off Rules 59
9.7.6 Pair Off Methodology 59
9.7.7 Pair Off Scenarios 60
9.7.7.1 Pair Off Scenario When Criteria Match Exactly for Quantity, Settlement Date and Final Money (Perfect) 60
9.7.7.2 Pair Off Scenario When Obligation Underlying Security is Classified as a Municipal 60
9.7.7.3 One-to-Many Pair Off Scenario 61
9.7.7.4 Pair Off Scenario When Remainder Balances are Used in Subsequent (Future) Pair Offs 62
9.7.7.5 Using the Obligation Warehouse Pair Off Indicator 63
9.7.7.6 Managing the Pair Off Indicator at the Obligation Level 64
9.7.7.7 Managing by Using the Account Level Pair Off Indicator 64

10. OBLIGATION WAREHOUSE PRODUCTION SUPPORT CONTACTS 66

11. USER TESTING 67

11.1 Obligation Warehouse Web 67
11.2 MQ Messaging 67

12. CNS ELIGIBILITY FOR OPERATIONS PERSONNEL 68

12.1 Managing What is Sent to CNS 68

12.2 Precautions for CNS Eligibility Check 69
12.3 Settlement—Balancing for Closed Sent to CNS 69
12.4 Follow-Up for an Obligation Closed –Sent to CNS in Error 70
12.4.1 Requesting Reversals of Closed Obligations Set to Settle CNS 70
12.5 Research for Obligations Closed—Sent to CNS 70

13. RECAPS FOR OPERATIONS PERSONNEL 71

13.1 Obligation Warehouse Comparison and Trade Resolution Procedures 72
13.2 RECAPS Calendar Plan 73
13.3 Managing What is Included in RECAPS 73
13.4 Precautions Related to RECAPS 75
13.5 Settlement–Balancing of RECAPS 75
13.5.1 Before the RECAPS Cycle 75
13.5.2 After the RECAPS Cycle 75
13.6 Follow-Up for an Obligation Included in RECAPS in Error 76
13.7 Research for Obligations in RECAPS 77

14. REORGS FOR OPERATIONS PERSONNEL 79

14.1 REORG Transformation in Obligation Warehouse 79
14.2 REORG Information Updates 80
14.3 Precautions for REORG in the Obligation Warehouse system 80
14.4 Settlement and REORGs—Reconciliation of REORG 81
14.5 Follow-Up of Obligation Included in REORG in Error 81
14.6 Research for Obligations Transformed by REORG 82

15. OBLIGATION STATUS AND EVENT MAP 83

16. IMPLEMENTING OBLIGATION WAREHOUSE 93

17. USING THE OBLIGATION WAREHOUSE WEB 95

17.1 Registering to Using the Obligation Warehouse Web 96
17.1.1 Becoming an Access Coordinator for Your Firm 96
17.1.2 Adding Roles to a User Profile 97
17.1.3 Resetting a Password 97
17.2 Home Page 99
17.3 Obligation Entry Page 100
17.4 Statuses of Obligations 104
17.5 Obligation Search Engine 107
17.6 Obligation Search Results 111
17.7 Available Actions for Obligations on Obligation Warehouse 113
17.8 Comparisons–Bilateral Advisory Split View 115
17.9 Settlements—Bilateral Advisory Split View 117
17.10 Exception Stats Comparisons 119
17.11 Exception Stats Settlement 122
17.12 Rejects 125
17.13 Actions—View 125
17.14 Actions—Affirm 128
17.14.1 Affirm of Comparison Request 128
17.14.2 OPEN Obligation Status 132

17.15 Actions—Modify 132
17.16 Actions—DK of Comparison Request 134
17.17 Actions—UnDK 140
17.18 Actions—Cancel 142
17.18.1 Cancel of an Uncompared Obligation 143
17.18.2 Cancel of a Compared (OPEN) Obligation 147
17.19 Actions—Un-Cancel 149
17.19.1 Un-Cancel of an Uncompared Obligation in a Cancel Status 149
17.19.2 Un-Cancel of Compared (OPEN) Obligation (a.k.a. Cancel of a Cancel Request) 150
17.20 Actions—Bilateral Agreement of Delivery Made 152
17.20.1 Delivery Notification Request 153
17.20.2 Acceptance of Delivery Notification 155
17.20.3 DK of Delivery Notification 158
17.20.4 Cancel of Delivery Notification Request 161
17.21 Actions—Reclaim Notification Request 163
17.21.1 Reclaim Notification Request 164
17.21.2 DK of Reclaim Notification Request 168
17.22 Actions—Exclusion Indicators 172
17.22.1 Exclude from CNS Eligibility Check 172
17.22.2 Remove CNS Withhold 174
17.22.3 Exclude from Mandatory Reorganization in the Obligation Warehouse system 175
17.22.4 Include for REORG 176
17.22.5 Exclude from RECAPS 177
17.22.6 Include for RECAPS 180
17.22.7 Include for Pair Offs 181
17.23 Obligation Warehouse Web Report Center 189
17.24 Account Level Pair Off Function 193
17.25 Obligation Warehouse Participant Contact List 198
17.26 Obligation Warehouse Web Help 200

1. ABOUT THIS USER GUIDE

This Obligation Warehouse user guide contains general knowledge about using the Obligation Warehouse interfaces to other NSCC and DTC applications and to the outside parties, including participants and regulators. This guide explains how information flows from trade capture to clearance and then through settlement systems, such as CNS exits, NSCC Balance Orders and non-CNS ACATS receive and deliver instructions.

The Obligation Warehouse service allows for transparency in the market place beyond the typical CNS transaction entering through the listed exchange. Obligation Warehouse creates a database for non-CNS obligations to be recorded or confirmed and then held until settlement. Additionally, Obligation Warehouse gives the industry a centralized fail file to be used by DTCC and the regulators to understand the number and types of fails occurring in the marketplace. This guide includes the pair off feature and explains the communication linkage between DTC Settlement and Obligation Warehouse for obligations automatically sent for settlement completion.

You can also review information about the process flow and features for equity clearing and the Obligation Warehouse service. Learn more about general descriptions of businesses processes and information flow in the Obligation Warehouse system. The guide assumes that you have prior securities industry experience and a basic knowledge of Purchases and Sales (P&S) and settlement processing.

1.1 Revision History

The following table shows the revision history for this document:

Date	Version	Author	Description
8/27/2012	1.0	Janice DiTore	First Edition
9/20/2012	1.1	Janice DiTore	See fields 541-551 in the **Obligation Warehouse Position MRO - Intraday and End of Day (AutoRoute Product ID: Production 02050703, PSE Test 02980703)** file available in the Obligation Warehouse Technical Resources page.

2/18/2021	7.3	Pawel Pieczara	Improved the description in the ACATS section.

2. COMMON CODES AND ACRONYMS

The following table shows the common codes and acronyms used by Obligation Warehouse:

Code	Definition
ACAT	ACATS receive/deliver instructions
ACPT	Accept Delivery through Obligation Warehouse Web
ACRC	Accept Reclaim through Obligation Warehouse Web
AFFM	Affirm of Uncompared obligation through Obligation Warehouse Web
CADM	Closed by Administrative Action
CANC	Uncompared Cancel status
CCAN	Closed due to a Participant Cancel submission
CCRQ	Cancel of a Cancel Request
CLSD	Closed status
CMPE	Obligation compared with all elements matching exactly
CNDL	Cancel of a Delivery notification by the submitter
CNMT	Request a Cancel of a Matched obligation
CNRC	Cancel a Reclaim request for bilateral acceptance
CNSE	CNS Exits
CNUC	Cancel of Uncompared obligation
DCAT	ACATS with Auto DO (Delivery Order) instructions
DEAD	Deleted Uncompared obligation due to administrative action
DEDK	Deleted comparison request due to DK
DEPS	Deleted due to Participant Swing
DKCN	DK of a Cancel Request on a matched obligation
DKDL	DK of Delivery notification request for bilateral acceptance
DKPA	Comparison DK, pending acceptance of delivery status
DKRC	DK of Reclaim notification request for bilateral acceptance
DKUC	DK of Uncompared obligation
DKUN	DK of Uncompared status
DLVF	Full Delivery completed
DLVP	Partial Delivery completed
ECAT	Obligation exited from the ACATS settlement process
FCAT	Obligation failed in the ACATS settlement process
INST	Instruct of Comparison Request
ICNS	Remove the Withhold from CNS (available to submitter of withhold)
IRCP	Include obligations for RECAPS processing
IREO	Include for Mandatory Reorganizations
IPOF	Include for Pair off
IMSC	IMS permanent cancel
IMSD	IMS permanent drop

Code	Definition
IMSR	IMS permanent reject
MKDL	Obligation comparison request marked for delete status
MODP	Modification of matching fields
MODX	Modification of non-matching fields
NSCC	NSCC Balance Orders
OPEN	Compared obligation status
OPPA	Obligation is compared, and pending acceptance of delivery notification status
PART	Participant submission
PCAN	Obligation is compared, pending cancellation agreement by the contra status
PCPA	Obligation is compared, pending agreement by the contra, and pending bilateral acceptance of a delivery notification request status
PMSG	Participant Message
POFF	Pair off Full
POFP	Pair off Partial
RCLF	Full Reclaim of delivery completed
RCPA	Reclaim of closed obligation, pending acceptance of a delivery notification request status
RECP	RECAPS process
REOR	Mandatory Corporate Actions applied to obligation
SCNS	Sent to CNS
SIMS	Sent to IMS
SUBM	Internal Submission
SWNG	Participant Swing
UNCP	Uncompared obligation status
UNDK	Remove DK of Uncompared status
UNPA	Uncompared obligation and pending acceptance of delivery notification by contra
XCNS	Exclude from CNS processing
XRCP	Exclude from RECAPS processing
XREO	Exclude from Mandatory Reorganizations
XPOF	Exclude from Pair off

3. GENERAL INFORMATION

The Obligation Warehouse service is a product of the National Securities Clearing Corporation (NSCC) which is a member owned subsidiary of the Depository Trust and Clearing Corporation (DTCC). The services, provided for trade capture and clearing, create a common repository for the transactions from the marketplaces, including the listed exchanges and alternative trading platforms collectively. It then consolidates the transactions to reduce the burden of trade-for-trade settlement for each transaction. Additionally, NSCC provides a guarantee for specific transactions that are netted through Balance Orders or the CNS accounting service and settled at NSCC, DTC, or at another depository.

The National Securities Clearing Corporation (NSCC) has upgraded and expanded the technology for the Reconfirmation and Pricing Service (RECAPS) and introduced the Obligation Warehouse. The Securities and Exchange Commission (SEC) approved the NSCC Rule filing and Financial Regulatory Authority (FINRA) provided the interpretative guidance to state that the Obligation Warehouse is a mandated service for NSCC broker dealer full service members.

3.1 Scope of the Obligation Warehouse System

Obligation Warehouse provides an automated service for the matching of obligations submitted by members for U.S. securities classified as equities, corporates, or unit investment trusts. The centralized service supports bilateral matching of ex-clearing and failed obligations in real-time. Obligations held in the central repository are stored and maintained until closure or cancellation. Daily the Obligation Warehouse checks the OPEN status obligations for CNS eligibility. Multiple times throughout the day Obligation Warehouse transforms obligations for any of the applicable mandatory corporate action events. Additionally, the failed non-CNS obligations being stored in the Obligation Warehouse system are marked to the market price provided a new settlement date and netted during the periodic RECAPS cycle.

3.2 Basic Background

Trades originate in the broker dealer community and are transacted at either a registered exchange, such as: BATS, CHX, NASDAQ, NYSE or NSX, through a qualified special representative (QSR) using the CMU RTTM or ACT comparison systems or directly between two parties. The transactions are then sent to one of NSCC trade capture systems:

- If initiated on registered cash equities exchange, it is reported in Universal Trade Capture (UTC).
- If matched in ACT, it is reported in UTC.
- If submitted and matched through the Corporate Municipal or Unit Investment Trust Real-time Trade Matching engine (CMU RTTM), the reporting is available in RTTM.

The one transaction type that is not a result of submitting through a trade capture system is the ex-clearing trade where two parties agree to terms and exchange confirmations. These ex-clearing trades can be submitted to Obligation Warehouse and the match is recognized as an electronic form of the confirmation required by FINRA.

After the transaction information is at NSCC the data moves from Trade Capture to Clearance. For the trades that entered through UTC or RTTM a sorting process takes place to recognize the underlying security and contra-parties to the trade as either CNS or Non-CNS eligible. Most transactions flow into the CNS accounting system. The securities are then netted and settled through NSCC.

Those securities that are not CNS eligible are accumulated into NSCC Balance Orders, netting where possible. NSCC Balance Orders are settled at the DTC depository using delivery orders (DO’s).

If an obligation has not settled on settlement date then it is considered a fail. Fails are maintained in the Obligation Warehouse and periodically marked to market during a reconfirmation and pricing service, which is known as the RECAPS process.

3.2.1 About the Depository Trust and Clearing Corporation (DTCC)

DTCC is the umbrella organization comprised of several companies including:

- Depository Trust Company (DTC) which is a banking company that settles and maintains securities for most U.S. entities.
- Fixed Income Clearing Corporation (FICC) operates under two entities the Government Securities Clearing Corporation (GSCC) and Mortgage Backed Clearing Corporation (MBSD). Each entity compares and provides a central counterparty to clear and settle their respective transactions.
- National Securities Clearing Corporation (NSCC) performs trade capture, clearance, and account transfer for transactions from the major marketplaces acting as a central counter-party for most transactions and aggregating non-guaranteed items for ease of settlement.
- Some of the other firms where DTCC have interests are: DTCC Solutions and Global Trade Repository.

3.2.2 NSCC Guaranteed Services

NSCC acts as the central counterparty for virtually all the broker-to-broker trading of cash equities, listed corporates, municipals and unit investment trusts in the US marketplaces. As the central counterparty for the industry in the marketplace, CNS is the core netting, allotting and fail control engine. Within CNS each security is netted to one position per member with NSCC as the central counterparty (novation).

NSCC provides the final settlement instructions to its customers each day, the payment and movement of security ownership occurs at DTC.

3.2.3 NSCC Non-Guaranteed Services

Transactions that are ineligible for CNS are referenced as non-CNS obligations. Settlement for non-CNS obligations occur at the direction of the members, usually through DTC. They can occur at other depositories, such as the Canadian Depository (CDS).

3.2.4 DTC Settlement

In addition to NSCC’s transactions, DTC settles institutional trades, money market instruments and other financial obligations. As DTCC’s depository, DTC eliminates the movement of securities by providing book-entry deliveries, which transfers ownership of securities electronically.

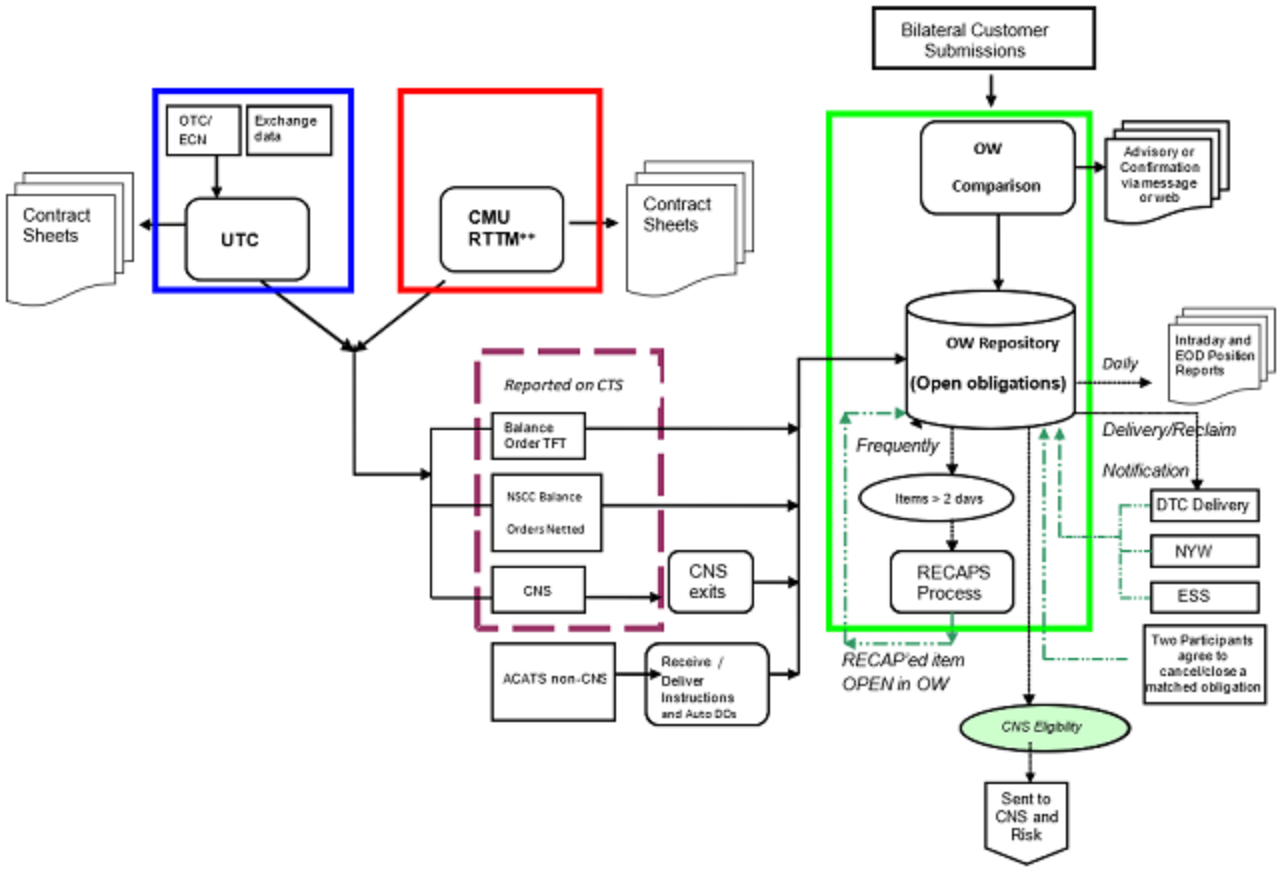

3.3 Contact Us

Use the following NSCC contacts for information about Obligation Warehouse. You can also contact your DTCC Relationship Manager or obtain general assistance by visiting the DTCC Client Center.

For...	Contact...
General questions and product support	NSCC Support by email at NSCCSupport@dtcc.com.
Setup and testing	NSCC Integration by email at NSCCIntegration@dtcc.com.
Issues with logging on to the system	DTCC Client Support. Call the following number, and then follow the prompt for product support. ◦ For US and Canada, call 1 888–382–2721. ◦ For the UK, Europe, and Asia, call +1 212–855–8099.

3.4 Input Features

The following figure shows the basic input features:

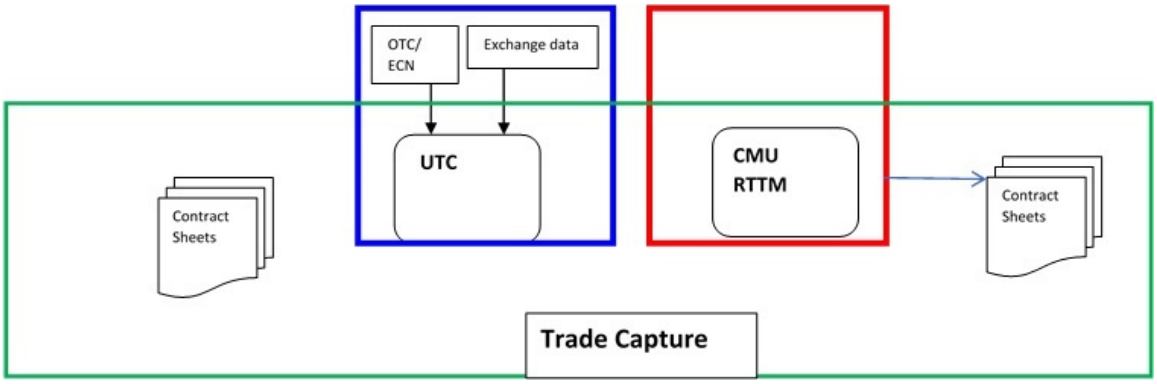

3.4.1 Post-Trade Processing of Transactions

- Trade Capture
- Clearance
- ACATS
- Obligation Warehouse
- DTC Settlement: IMS, NYW, ESS
- Settlement Away From DTC

3.4.1.1 Trade Capture

Every broker-to-broker trade whether direct, on an exchange, through an alternative trading platform, ECN, or Over the Counter (OTC) must have a confirmation according to Uniform Practice Code (FINRA Rule 11100). Transactions accepted from the registered exchanges and Qualified Special Representative (QSR) submissions into NSCC through the Universal Trade Capture (UTC) appear on contract sheets. The same is true of CMU RTTM transactions, where comparisons are recorded on contract sheets.

3.4.2 Clearance

From the Trade Capture function, the data enters NSCC Clearance. Clearance begins a sorting process into CNS eligible transactions available for the NSCC guarantee and non-CNS transactions.

The transactions eligible for continuous net settlement process enter the CNS and settle at NSCC. The non-CNS transactions go into the NSCC Balance Order process and further delineated into balance order netting versus trade for trade obligations. These NSCC balance orders are sent to the Obligation Warehouse. The information about the obligation that uniquely identifies it is the OW ID/Obligation Warehouse control number. When the NSCC balance orders are loaded to Obligation Warehouse as matched obligations, only the settlement component needs to be completed.

In the case of CNS exits, the underlying security is no longer eligible for the CNS service so it is removed (exited) and placed in the non-guaranteed Obligation Warehouse as a matched obligation. Next, the settlement component must be completed.

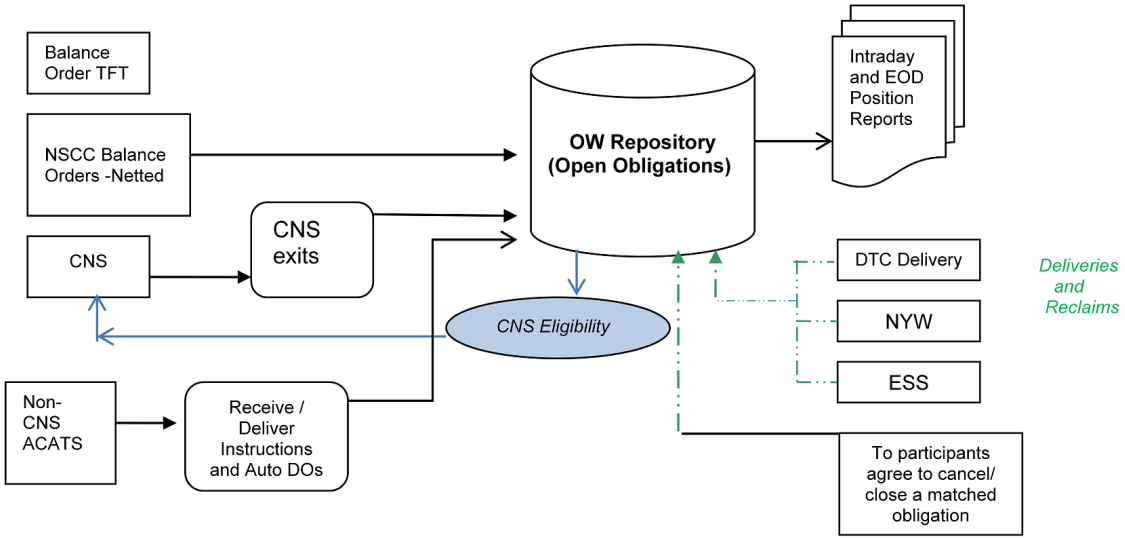

3.4.3 ACATS

The Automated Customer Account Transfer Service (ACATS) is the NSCC central processing system for the timely transfer of customer account assets between firms. Transfers are divided into CNS and non-CNS processing. The non-CNS items are sent to Obligation Warehouse as matched obligations.

Ensure that the OW ID/Obligation Warehouse control number is added to the DTC delivery order field. When the OW ID/OW Control Number field in the DTC Settlement system is populated, the Made delivery message is communicated directly to the Obligation Warehouse system to close the obligation. If an obligation settled through the DTC Settlement system without the OW Control Number populated on the settlement entry, a bilateral agreement is needed to close the obligation in Obligation Warehouse. Submit a Delivery Notification Request for bilateral agreement to close the obligation. If the obligation is settled outside of the DTC Settlement system, the two parties to the obligation can bilaterally agree on the settlement completion and close it.

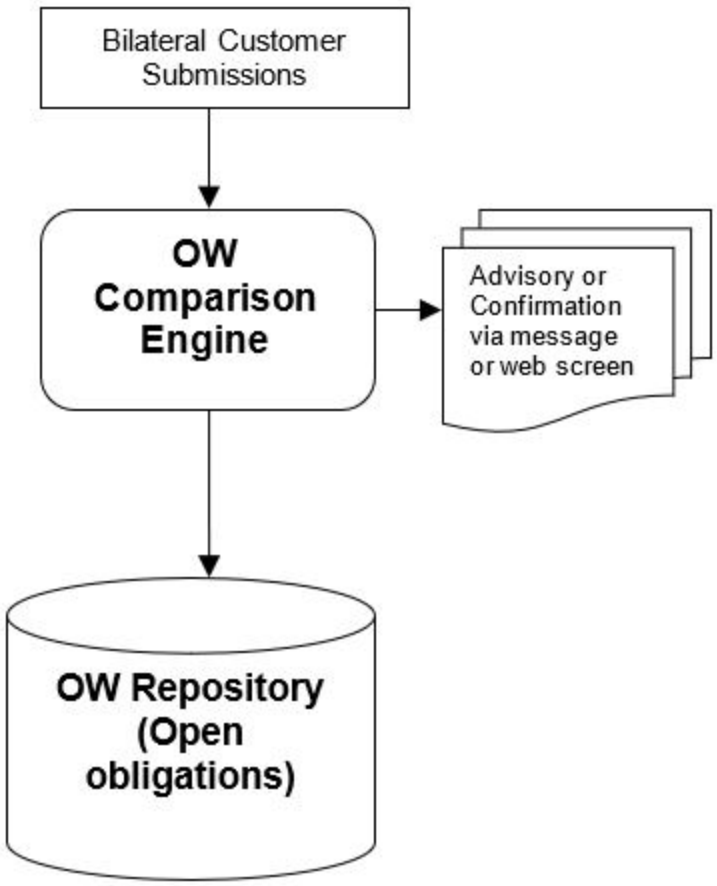

3.4.4 Obligation Warehouse

From the time the obligation, regardless of its original source, enters and matches in the Obligation Warehouse system until when it closes the underlying security can change attributes. The security can become CNS eligible or a mandatory corporate action event could occur. The Obligation Warehouse monitors and adjusts the obligations accordingly looking at the matched obligations, closing the old and calculating the new values and reporting the necessary cash adjustments.

Members who conduct business outside the common trade flow from a registered exchange, alternative trading system, electronic communications network, or through a Clearing Corp system, such as CMU RTTM. Otherwise, the confirmation process can be fulfilled using the matching facility in the Obligation Warehouse Web. Obligation Warehouse comparison is achieved when two parties enter like details into Obligation Warehouse through messaging or the web portal and all matching fields agree or meet the tolerances.

The ex-clearing comparisons are included in the database with all other Obligation Warehouse data. Each day the entire Obligation Warehouse Repository is reviewed to determine if any of the open obligations are eligible for CNS. If yes, the obligation is closed and moved into CNS for settlement.

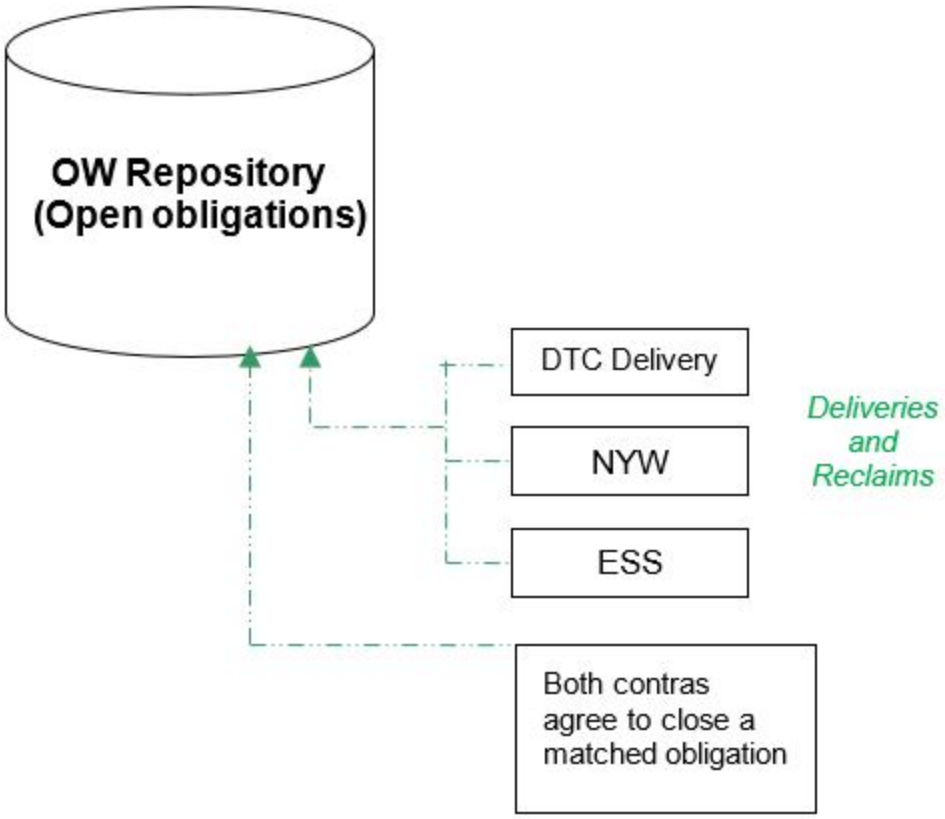

3.4.5 DTC Settlement: IMS, NYW, ESS

Most non-CNS obligations in the Obligation Warehouse system are settled through the DTC Settlement systems using Delivery Orders (DOs), New York Window (NYW), or Envelope Settlement System (ESS). Members submit DTC DOs or entries to NYW or ESS and include the Obligation Warehouse control number on the record. When the settlement is Made, the completion is communicated to Obligation Warehouse to close the obligation. This methodology is used for partials, full deliveries, and reclaims made within two days of the completed delivery.

3.4.6 Settlement Away From DTC

When members elect to complete deliveries for non-CNS obligations at a depository other than DTC or settle direct with each other; obligations in the Obligation Warehouse system are closed by bilateral agreement.

3.5 Output Features

Obligation Warehouse uses three communication methods: MQ messaging, machine readable output (MRO) files, and a web portal known as Obligation Warehouse Web.

3.5.1 MQ Messaging

For real-time input and output, the Obligation Warehouse communicates with ISO 15022 compliant MQ messages. The MT515 input/modification messages are submitted by members. Obligation Warehouse returns MT509 acknowledgments as well as MT518 responses. Obligation Warehouse generates reject messages using MT598 and system notifications through MT599.

3.5.2 File Output

File output is available as machine-readable output (MRO) through NDM or FTP transmission. Obligation Warehouse produces files for Intraday Positions, End of day Positions, Reorg. Cash Adjustments (five times daily), and the Obligation Warehouse Pair off Activity.

3.5.3 Obligation Warehouse Web

The Obligation Warehouse Web gives every Obligation Warehouse eligible member access to real-time information, in addition to input and response capability. Additionally, all output files are parsed into sections and defined as reports readily available in the Obligation Warehouse Web Report Center. These reports are available for up to two years and, upon request, up to another five years.

4. SYSTEM OPERATIONS

This section explains the hours of operations, holiday processing, and system set up requirements.

4.1 Hours of Operations

Obligation Warehouse hours of operation begin with the start of day, which is approximately 21:00 (9 P.M) Eastern Time the prior evening or upon completion of the end of day processing, if delayed. At the start of the day, the system processing date in the Obligation Warehouse system is advanced to the next business date, all message queue (MQ) messaging and Obligation Warehouse Web submissions are accepted and processed.

The Obligation Warehouse Web is available during the hours of operation. If the member uses MQ messaging for communicating with Obligation Warehouse, an MT599 MQ administrative message is automatically generated for both the Good Morning and Good Night messages, to signal the beginning and end of the Obligation Warehouse processing day.

4.1.1 Start of Day (SOD)

At the start of day (SOD), Obligation Warehouse accepts the obligations exited from CNS, apply mandatory corporate actions, and close and rebook any Participant Swing.

4.1.2 During a Business Day

Balance orders are added to Obligation Warehouse three times daily, after each generation of the Consolidated Trade Summary (CTS). Typical times of issues for the CTS are 22:00 (10 P.M), 1:00 (A.M), and 13:00 (1:00 P.M) Eastern Time.

Other times during a business day when mandatory corporate actions are applied include: 10:00 (A.M), 12:30 (P.M); 14:30 (2:30 P.M), and 16:45 (4:45 P.M) Eastern Time.

The CNS eligibility check is performed at 17:00 (5:00 P.M) Eastern Time where the securities of obligations in an OPEN status are validated for CNS eligibility and if acceptable, closed and sent to CNS.

The Obligation Warehouse Pair off process runs immediately after the completion of the CNS eligibility check. Only obligations in an OPEN status where both contras have marked the obligation to include for pair off are considered in this process. Obligations that pair off are either decremented or closed depending on whether it is a partial or full pair off.

4.1.3 Close of Business

The close of business begins daily at 18:00 (6:00 P.M) Eastern Time. During the end-of-day (EOD) process the ACATS receive and deliver instructions for SD-1 non-CNS items are entered into Obligation Warehouse. As the last process during the EOD, the RECAPS occur on the published predefined dates.

4.2 Holiday Processing

This section explains the process for holidays.

4.2.1 NSCC Holiday, Where Banks are Open

On holidays, such as Good Friday, the broker dealer community is closed for business; however, the Federal Reserve and banks are open.

Here is the schedule of what to expect surrounding a holiday like the Good Friday holiday in the Obligation Warehouse product. **Obligation Warehouse is unavailable on the holiday** and does not recognize the date as a valid settlement date.

On the processing day immediately before the holiday, Obligation Warehouse Web and MQ messaging are open for business as usual. In the Good Friday example:

- Automated additions of CNS exits, NSCC Balance Orders are made to Obligation Warehouse for settlement dates of Monday* and Tuesday.
- At 17:00 (5 P.M) Eastern Time, the CNS eligibility check runs to include settlement dates of Monday and prior.
- Mandatory Corporate Actions are applied in the Obligation Warehouse, effective for Monday's settlement date***.
- DTC Settlement Auto DO's are created and sent to IMS for process date of Monday**.

The following table shows an example for the Good Friday holiday:

Obligation Warehouse Function Description	One business day prior to the holiday	Day of Good Friday holiday
Obligation Warehouse Web access, input	normal	Closed for business
MQ messaging to/from Obligation Warehouse	normal	Closed for business
Intraday and EOD MRO files	normal	NOT PROCESSED
CNS Exits auto-load to Obligation Warehouse	normal S/D Monday	NOT PROCESSED
ACATS auto-load to Obligation Warehouse	normal S/D Monday	NOT PROCESSED
NSCC Balance Orders auto-load to Obligation Warehouse	normal S/D Monday*	NOT PROCESSED
Auto DO file created and sent to DTC Settlement	normal S/D Monday**	NOT PROCESSED
CNS Eligibility Check at 5 P.M. Eastern Time	normal S/D Monday	NOT PROCESSED
Obligation Warehouse Pair off process	normal	NOT PROCESSED
Mandatory Corporate Actions applied	normal S/D Monday***	NOT PROCESSED

The following footnotes are because the process date in the Obligation Warehouse is still Thursday until approximately 21:00 (9 P.M.) Eastern Time on Thursday, after the start of day advances the processing date to Monday.

* Except for the 12:00 P.M Eastern Time CTS obligations that have the settlement date of Thursday.

** Except for the 12:00 (P.M), and 14:30 (2:30 P.M) Eastern Time, feeds to IMS that have the settlement/process date of Thursday.

*** Except for the 10:30 (A.M.), 12:30 (P.M), and 14:30 (2:30 P.M) Eastern Time reorg. cycles, which have a settlement date of Thursday.

4.2.2 Bank Holiday, Where NSCC is Open

Several times throughout the year the broker dealer industry and the banks do not use the same business calendar. For example, Columbus and Veteran's days the banks are closed for business; however, the broker dealer community is open for business. Here is the schedule of what to expect in the Obligation Warehouse when this scenario occurs

On the processing day immediately before the bank holiday, Obligation Warehouse is open for business as usual, except it does not send obligations to CNS at 17:00 (5 P.M) Eastern Time.

Beginning on the processing day that equals the bank holiday:

- Obligation Warehouse Web and MQ messaging are open for business as usual.
- Automated additions of CNS exits, NSCC Balance Orders and non-CNS ACATS are not be made to Obligation Warehouse.
- Automated Delivery Orders (Auto DO's) are not produced and sent to IMS.
- At 17:00 (5 P.M) Eastern Time, the CNS eligibility check runs to include settlement dates of tomorrow and prior.

The following table shows an example of bank holidays when NSCC is open for business.

Obligation Warehouse Function Description	One business day prior to Bank Holiday	Day of Bank Holiday
Obligation Warehouse Web access, input	normal	normal
MQ messaging to/from Obligation Warehouse	normal	normal
Intraday and EOD MRO files	normal	normal
CNS Exits auto-load to Obligation Warehouse	normal	NOT PROCESSED
ACATS auto-load to Obligation Warehouse	normal	NOT PROCESSED
NSCC Balance Orders auto-load to Obligation Warehouse	normal	NOT PROCESSED
Auto DO file created and sent to DTC Settlement	normal	NOT PROCESSED
CNS Eligibility Check at 5 pm ET	NOT PROCESSED	normal
Obligation Warehouse Pair Off process	normal	normal
Mandatory Corporate Actions applied	normal	normal

4.2.3 Federal Holidays Where Both NSCC and Banks are Closed

On a weekday when both banks and NSCC are closed, the Obligation Warehouse advances to the next available business day. For example, on the evening prior to Independence Day (July 4), the Obligation Warehouse advances from a business processing date of July 3 to the next available business date, July 5 if it falls during the business week.

4.3 System Set Up

The following section explains how to set up your system.

4.3.1 Set Up for Message Queue (MQ) Messaging

Members using MQ messaging as their communication linkage with Obligation Warehouse require set up and testing for the MQ channels and messages. Additionally, all messages types should be tested to and from the Obligation Warehouse application.

4.3.1.1 Communication Set Up

For members preparing to set up MQ as their primary communication to Obligation Warehouse, require that technical preparations are made to define MQ channels and queues. Contact the Service Activation group to obtain the appropriate prework documentation at NSCCSupport@dtcc.com. Additionally, notify Relationship Services to act as the coordinator for the onboarding of MQ messaging for Obligation Warehouse.

- Define channels and queues for both test and production needs.
- Run ping test with Service Activation group
- Define MQ subscription to Obligation Warehouse application in test.
- Contact UAT group to begin submitting MQ messages in the Obligation Warehouse system Test.
- Create a plan with UAT to conduct testing of MQ messages
- Define and communicate with Relationship Services the date of production MQ.
- Check that production queues and channels are enabled and subscriptions active.
- Begin MQ communication to Obligation Warehouse in productions.

4.3.2 Obligation Warehouse Web

Obligation Warehouse Web uses the Common Runtime Environment (CRE) registration system that allows for a single logon and password to multiple applications. Each member has assigned the Access Coordinators at their respective firm that maintains the user access and resets passwords. For more information, see the Using the Obligation Warehouse Web topic.

4.3.2.1 Obligation Warehouse Web for Access Coordinators

To enable access to the Obligation Warehouse Web, the access coordinator must add the Obligation Warehouse product for the member to the firm's profile. If the Obligation Warehouse is not listed in the menu of products, the access coordinator should request access by emailing WebRSG@dtcc.com. The addition of the Obligation Warehouse in the list of available products for your firm should occur the same day.

After the menu contains the Obligation Warehouse in the list of available products, the access coordinator adds it to the firm's profile. The access coordinator can then begin granting users their access to the Obligation Warehouse Web.

4.3.2.2 Obligation Warehouse Web Access for Users

The access coordinator at your firm sets up access to the Obligation Warehouse Web. Access coordinators grant user either read-only or read and write privileges. After access is granted, sign in to the Obligation

Warehouse Web through the DTCC portal at https://portal.dtcc.com/.

4.3.2.3 Obligation Warehouse Web Access for Account Level Pair Offs

The access coordinator at each firm can assign one or two Obligation Warehouse Web users with the ability to maintain the business administrative function of adding, modifying, and deleting the account level pair off preferences.

4.4 Extension Guidelines

If an extension is needed for any input submission, firms should use one of the following methods to obtain support:

- Email NSCC Support at NSCCSupport@dtcc.com.
- Telephone DTCC Client Support at 1-888-382-2721 and follow the prompt for production support.

If DTCC, at its sole discretion, extends a deadline that would significantly impact reporting times, a communication is sent out.

5. ELIGIBILITY FOR OBLIGATION WAREHOUSE

The following sections explain the eligibility standards for members, security eligibility, and types of transactions.

5.1 NSCC Member Firms

Broker dealer members of NSCC that are known as full service (Rule 2) are required to use the mark to market service of Obligation Warehouse known as RECAPS. The list of full service members is posted to the DTCC.com website in the NSCC Members Directories.

5.2 Using Obligation Warehouse Web

Within the broker dealer NSCC member firms, specific user groups should be activated for access to the Obligation Warehouse Web to monitor and maintain obligations in Obligation Warehouse. Typically, the areas within the firm that use Obligation Warehouse Web are:

- Purchases and Sales for comparisons
- Corporate Actions for Mandatory Reorganizations
- Settlement for cash adjustments and securities settlement reconciliation

5.2.1 Access Coordinators

Each NSCC member firm has assigned at least two Access Coordinators that define the products available and register the users to have access to DTCC applications using the DTCC web portal.

5.2.2 Obligation Warehouse Web Users

Obligation Warehouse Web users can be set up by the Access Coordinators at their firm to be either Read-only or Read/Write, whereby they can enter and respond to notifications within the application.

5.3 Security Eligibility

The underlying security of each obligation is validated upon entering the Obligation Warehouse Web system and prior to being introduced to any downstream process or system transformation, such as RECAPS. DTCC uses the internal security master file in conjunction with the vendor-sourced information from Standard and Poors (S and P).

5.3.1 CUSIP Requirements

Any valid U.S. CUSIP/ISIN, recognized by SandP, denominated in U.S. dollars are eligible for Obligation Warehouse with the exception of government, mortgage-backed and foreign securities. The foreign security check examines CUSIPs against the following criteria:

Category	Sub-Category	Obligation Warehouse Rules
CNS-Eligible	All Types	Admit
Foreign-Netting Eligible	All Types	Reject
Non CNS and Non Foreign-Netting	Issuer Country of Origin is U.S.	Admit
Non CNS and Non Foreign-Netting	Issuer Country of Origin is Canada	Admit
Non CNS and Non Foreign-Netting	Sub-Issue Type is ADR	Admit
Non CNS and Non Foreign-Netting	Not US and Not Canada and Not ADR	Reject

User-defined CUSIPs are not acceptable to Obligation Warehouse.

5.3.1.1 Sub-Issue Type List

The sub-issue type is defined on the DTC security master file for each CUSIP. The following table shows which system should to use for matching a transaction in the corresponding sub-issue type.

Sub-Issue Type	Sub-Issue Type Description	Comparison Method
5	Equity	Obligation Warehouse
10	Common Stock	Obligation Warehouse
11	Convertible Common Stock	Obligation Warehouse
12	Common Stock REIT	Obligation Warehouse
20	Preferred Stock	Obligation Warehouse
22	Preferred Stock REIT	Obligation Warehouse
23	Convertible Preferred Stock	Obligation Warehouse
24	Tender Rate Preferred Stock	Obligation Warehouse
30	Limited Partnerships	Obligation Warehouse–only valid SandP CUSIPs
40	CMO Denom in Units or Undivided Interest	Obligation Warehouse–DTC settling only
102	Auction Rate Preferred Stock (ARPS)	Obligation Warehouse
110	American Depositary Receipt (ADR)	Obligation Warehouse
111	DEPOSITARY SHARE	Obligation Warehouse
112	Muni Option call right	CMU RTTM
117	Exchange Traded Funds	N/A

Sub-Issue Type	Sub-Issue Type Description	Comparison Method
121	Equity 144A Designated Investors	Obligation Warehouse
125	Sealed Envelopes	N/A
126	Custody User CUSIP	N/A
130	Real-Estate Investment Trust (REIT)	Obligation Warehouse
310	Municipal Bond	CMU RTTM
311	Municipal Note	CMU RTTM
312	Municipal ARN	CMU RTTM
313	Municipal VMO	CMU RTTM
314	Municipal VRDO	CMU RTTM
315	Muni Insurance Customer Receipt	CMU RTTM
320	MMI Muni VRDO/CP	CMU RTTM
330	MMI Muni CP Mode	CMU RTTM
340	Muni Bearer, Callable Zero	CMU RTTM
346	Muni Other Tax-Exempt	CMU RTTM
450	GNMA	N/A (Settles at Fed)
451	GNMA Pass Through	N/A (Settles at Fed)
452	GNMA Serial Note	N/A (Settles at Fed)
500	Corporate Bond (CB) or Global Corp Bond (GCB)	CMU RTTM
502	MMI Bankers= Acceptance Note (BA)	CMU RTTM
504	MMI Institutional Certificate of Deposit	CMU RTTM
505	Certificated Money Market Instrument	CMU RTTM
506	Certificated Money Market–Periodic Payer	CMU RTTM
507	Certificates of Deposit	CMU RTTM
525	MMI Corporate Commercial Paper	CMU RTTM
526	MMI Corporate VDRO/CP	CMU RTTM
530	MTN Medium-Term Note	CMU RTTM
531	MMI Deposit Note	CMU RTTM
532	MMI Medium-Term Bank Note	CMU RTTM
533	MMI Medium Term Note	CMU RTTM
540	Collateralized Mtge Obligation or Global CMO	Obligation Warehouse
541	Asset-backed Security (ABS) or Global ABS (GABS)	Obligation Warehouse
542	Non-CMO/ABS Amortizing Issue	CMU RTTM

Sub-Issue Type	Sub-Issue Type Description	Comparison Method
546	Corporate Other Tax Exempt	CMU RTTM
550	MMI Short-Term Bank Note	CMU RTTM
551	Z CPN Denom in Initial Principal Amt	CMU RTTM
571	Corporate Auction Rate Note	CMU RTTM
572	Convertible Corporate Debt	CMU RTTM
574	Corporate Short-Term Note	CMU RTTM
575	Corporate Debenture	CMU RTTM
576	Corporate Variable Rate Demand Obligation (VRDO)	CMU RTTM
577	CORPORATE INSURED CUSTODIAL RECEIPT	CMU RTTM
578	Tender Rate Note	CMU RTTM
579	Zero Coupon Bond	CMU RTTM
601	GOVERNMENT SECURITY	N/A (Settles at Fed)
602	Government Trust Certificate	N/A (Settles at Fed)
603	Junk and Treasury Growth Receipt (JGR)	N/A (Settles at Fed)
610	US Treasury Security	N/A (Settles at Fed)
611	US Treasury Bill	N/A (Settles at Fed)
612	US Treasury Note	N/A (Settles at Fed)
613	US Treasury Bond	N/A (Settles at Fed)
620	US Government Agency Security	N/A (Settles at Fed)
704	Corporate Debt Derivatives	CMU RTTM
705	Equity Derivatives	Obligation Warehouse
706	Muni Derivatives	CMU RTTM
708	Muni Amortized Issues	CMU RTTM
720	Warrant	Obligation Warehouse
730	Right	Obligation Warehouse
760	Mutual Fund	Obligation Warehouse–Settles at DTC and is not Fund Serv Eligible
761	Closed End Fund	Obligation Warehouse–Settles at DTC and is not Fund Serv Eligible
762	(IMM) Institutional MMI Mutual Fund Shares	N/A
780	EQUITY UNIT	Obligation Warehouse
781	DEBT UNIT	Obligation Warehouse
790	UNIT INVESTMENT TRUST (UIT-NUVEEN ONLY)	CMU RTTM
795	UNIT INVESTMENT TRUST (UIT)	CMU RTTM

5.4 Types of Transactions

The following section explains the types of transactions available.

5.4.1 Ex-Clearing

Broker-to-broker transactions that previously were not submitted to the Clearing Corporation either directly or through a marketplace are referred to as ex-clearing.

NSCC members enter transactions into Obligation Warehouse where the security eligibility meets the criteria for Obligation Warehouse and it is matched in real-time and maintained in the repository. An example of maintenance is the daily check of obligations for CNS eligibility. If eligible, the obligations are closed and sent to CNS for settlement.

Comparison Requests where the trade date, settlement date, and processing date for Obligation Warehouse are the same are rejected by Obligation Warehouse.

Note

Obligation Warehouse allows for submission of a blank (Obligation Warehouse Web only) or default (12/31/9999 in MQ) trade date but this practice should not be used unless the trade date is unavailable. If the trade date is known, it should be submitted in the trade date field.

5.4.2 Failed Obligations

Obligations that failed to settle must be in the Obligation Warehouse system for the periodic mark to market process known as RECAPS. Obligations that originated on an exchange or other marketplace where NSCC received the transactions into the Universal Trade Capture (UTC) system are automatically included in the Obligation Warehouse system.

Best practice as agreed upon by the industry, if the fail was a cash transaction (same day settlement), enter it into Obligation Warehouse on the next available business processing day, with the trade date and settlement date populated appropriately. Obligation Warehouse does not permit submitting an obligation where the trade date, settlement date and Obligation Warehouse processing date are all equal.

As of submissions of failed transactions are accepted into Obligation Warehouse; whether they were cash, next day or skip day settlements.

5.4.3 Comparison Only Obligations

Comparison only trades are unsupported by Obligation Warehouse and should be matched in CMU RTTM.

6. APPLICATION INPUT AND OUTPUT

This section explains the application sources.

6.1 Input Sources

The following sections provide information about the input sources for the application.

6.1.1 Universal Trade Capture (UTC)

The following tables shows the input sources for the Universal Trade Capture application:

Input Source	Description
Trade Capture and Reporting	The Trade Capture and Reporting Service validates and reports equity transactions executed in the US equity markets throughout the trading day. Trades are submitted to DTCC (through NSCC) by an exchange or by a Qualified Special Representatives (QSRs). Processing and reporting is performed in real-time, with output distributed an average of approximately 8 seconds after receipt. Universal Trade Capture (UTC) is the primary application for clearance input to DTCC. The project was conceptualized in 2008 by DTCC, with requirements developed through industry discussions. The application was formally implemented on March 25, 2011.
Correspondent Clearing	Correspondent Clearing is a trade capture position movement service that allows a participant to move a position from an executing broker's account (special representative) to a different clearing broker's account (correspondent). Most of Correspondent Clearing input is received in real time as well.
OTC Comparison	The Over-the-Counter (OTC) Comparison service accepts one-sided transactions from NSCC participants and matches buyers and sellers based upon clearing firm, executing market participant ID, CUSIP or trading symbol, share quantity, price and trade date. This is being considered for a future enhancement.
Foreign Securities Comparison and Netting	The Foreign Securities Comparison and Netting (FSCN) service automates the comparison and receipt of locked-in trades and bi-lateral netting of non-U.S. equity transactions. With the implementation of UTC, any market is now able to submit foreign netting transactions, upon request. Most UTC trades either proceed to the CNS® application for netting and settlement or become NSCC Balance Orders.

6.1.2 CMU RTTM

The Municipal Securities Rule Making Board (MSRB) mandates that all municipal trades must be submitted for automated reporting through the Corporate, Municipal and Unit Investment Trusts Real-Time Trade Matching service (CMU RTTM). The submissions to CMU RTTM are then matched and forwarded to either the CNS or to NSCC Balance Orders.

6.1.3 ACATS

The Automated Customer Account Transfer Service (ACATS) application provides members with a facility for moving customer assets positions from one bank/broker to another. After submitting a transfer input (TI) record, which is sourced from the transfer initiation form (TIF) that is completed by the account owner, and agreeing to the terms, the ACATS system assigns a control number to the transfer. ACATS then proceed downstream to either CNS, if eligible or another non-CNS system, such as Obligation Warehouse staging prior to settlement. In the Obligation Warehouse Web service, the ACATS control number is assigned as the cross-reference (Xref) number.

6.1.3.1 Non-CNS ACATS Receive and Deliver Instructions

For the processing of non-CNS ACATS instructions, see the documentation available n the DTCC Learning Center in the CNS ACATS DTC section. Changes affecting Obligation Warehouse include the indicators of ECATS and FCATS.

This section explains the process for non-CNS ACATS receive and deliver instruction that are ineligible for the ACATS CNS process. When an ACATS transfer has been designated as non-CNS as part of the initial transfer instruction or the security is ineligible for CNS the obligation is loaded to Obligation Warehouse two days prior to settlement during the Close of Business processing. The conditions needed for ACATS to have Obligation Warehouse eligibility:

The ACATS settlement location = 50 with a Settlement Reason Code equal to one of the following:

- IPO (Initial Public Offering)
- NSET (outside CNS, DTC, Fund/Serv) as defined by ACATS
- XSET (outside CNS, DTC, Fund/Serv) as defined by the submitter

  The obligation is loaded to Obligation Warehouse with the X-CNS = yes indicator.)

Asset transfers in safekeeping, restricted, Bank ACATS, mutual fund, or limited partnership securities are not permitted in the Obligation Warehouse system.

When ACATS load to the Obligation Warehouse system and the delivering contra party uses the Automated Delivery Order (Auto DO) process, Obligation Warehouse designates the origin as DCAT. DCAT mean the Auto DO has been sent to DTC Settlement with the Obligation Warehouse control number in the appropriate field. By populating the Obligation Warehouse control number on the DTC delivery order, Obligation Warehouse is notified when the delivery is made and the obligation can be closed. If an obligation settled through the DTC Settlement system without the OW Control Number populated on the settlement entry, a bilateral agreement is needed to close the obligation in Obligation Warehouse. Submit a Delivery Notification Request for bilateral agreement to close the obligation.

ACATS R and D Instructions are automatically loaded to Obligation Warehouse as part of the end of day processing. The Obligation Warehouse Web obligation source is either ACAT or DCAT, depending on whether Auto DO is used.

If the automated delivery order for the ACATS R and D Instruction is later permanently canceled, dropped, or rejected in the DTC Settlement system, Obligation Warehouse is notified and the obligation set back to an OPEN status with maintenance available.

6.1.3.2 ACATS Exited From the New Settlement Process

During the CNS night cycle, the ACATS obligations that are ineligible for CNS are exited to Obligation Warehouse, identified with the source code of ECATS. ECATS are loaded to Obligation Warehouse during the start of day process as an OPEN obligation.

6.1.3.3 ACATS Failed in the New Settlement Process

At approximately 15:10 (3:10 P.M.) Eastern Time daily, the ACATS that failed to settle is sent to Obligation Warehouse as FCATS. The FCATS is added in real time to Obligation Warehouse as an OPEN obligation.

6.1.4 NSCC Balance Orders

NSCC balance orders are accumulated from UTC and CMU RTTM where they are netted or marked trade for trade in preparation for members to create delivery orders at DTC.

NSCC balance order obligations are each assigned a balance order control number for tracking throughout the remainder of the life cycle. Obligations that are extracted and loaded into the Obligation Warehouse service use the NSCC balance order control number as the cross-reference (Xref) number. This NSCC balance order load to Obligation Warehouse occurs each time the Consolidated Trade Summary (CTS) is created. Only obligations where the securities are eligible for Obligation Warehouse and both the receiver and deliverer are NSCC full service members with Obligation Warehouse activated are loaded to Obligation Warehouse.

Note

Time frames listed have changed with the introduction of a shortened settlement cycle in 2017.

Transaction	Description
Multilaterally Netted	NSCC Balance Order transactions with like CUSIPs and settlement dates are marked to the uniform market priced, aggregated into buys versus sells, then netted and allotted to establish the least number of obligations needed to settle the security. The remaining obligations are automatically added to Obligation Warehouse two days prior to settlement.
Bilaterally Netted	Bilaterally netted NSCC Balance Orders require that the same counterparties have multiple trades in a CUSIP are netted to produce one buy and one sell for each settlement date. The resulting obligations are added to Obligation Warehouse when the CTS is produced, typically, two days prior to settlement.
Trade-for-Trade	Transactions that were traded as trade for trade as denoted on the original submission received from the exchange or member. Two days prior to the settlement date, the obligation is loaded into Obligation Warehouse with the trade for trade designation being noted by X-CNS = yes. Members using Universal Flip should be aware that conditions arise that create an obligation in the Obligation Warehouse system for the submitting firm that has not been flipped to the destination/settling firm. It is the responsibility of the member to monitor their accounts and close obligations where appropriate.
Aggregated Trade-for-Trade	Transactions in certificates of deposit (CD's) are aggregated in the NSCC Balance Order system. All like buys in the same CUSIP for the same contra are summed into one buy obligation. Likewise, all sells in the same CUSIP and contra are aggregated into one sell obligation. The result is that for each contra in every CUSIP, only one buy and one sell need to be settled. The resulting buys and sells are automatically loaded to the Obligation Warehouse two days prior to the settlement date.

Special Conditions for NSCC Balance Orders include:

- Balance Orders in Syndicate trades are eligible for Obligation Warehouse but are marked X-CNS=yes.
- Balance Orders where the security is a Municipal Buy-in Request are accepted in the Obligation

Warehouse system buy marked with X-CNS = yes.

- Balance Orders are excluded from Obligation Warehouse when the deliverer is equal to the receiver.

Obligations originating from balance orders are entered into Obligation Warehouse at the completion of each consolidated trade summary. The obligation source field on Obligation Warehouse Web denotes NSCC for Balance Orders.

6.1.5 CNS Exits

If CNS suspends the eligibility of a security for any reason, the obligations are exited and sent to Obligation Warehouse. The CNS exits include both the standard (SD-2) and non-standard (SD-1) settlements.

CNS exits are added to Obligation Warehouse with the original source of CNSE. The obligation is available for the daily CNS eligibility check, if the CUSIP becomes eligible for CNS settlement.

Municipal buy-ins exited from CNS are marked with the exclusion indicator of X-CNS = yes to prevent the obligation from possibly being reintroduced to CNS for settlement.

CNS exits are added as part of the Obligation Warehouse start of day process. Obligation Warehouse Web displays the obligation source as CNSE for CNS exits.

6.1.6 Input Methodology

Obligation Warehouse allows submission of obligations using either the Obligation Warehouse Web Obligation Entry page or MT515 Instruct, which is a 15022 ISO SWIFT like MQ messages.

6.1.6.1 Ex-Clearing

Trades that are consummated outside of the traditional exchanges or CMU RTTM are required by FINRA rule 11190 to have contras exchange confirmations. Obligation Warehouse satisfies the FINRA confirmation requirement and provides an electronic means of matching and retaining a historical record of the transaction.

Two contra-parties to the obligation enter the ex-clearing transactions directly into Obligation Warehouse. The ex-clearing transaction can be added to Obligation Warehouse anytime during business operation through either an MQ message or directly into the Obligation Warehouse Web entry page.

As a best practice, bilateral submissions for comparison (101 Confirmations) should be entered on the trade date, no later than 6:30 (A.M.) Eastern Time on TD +1. Participant bilateral submissions may be identified by the Original Source code of PART.

6.1.6.2 Fails

Each contra-party to the ex-clearing trade submits their trade details to Obligation Warehouse, where matching and response occurs in real-time.

Obligations that have failed to settle are required to reconfirm and reprice using the Obligation Warehouse RECAPS service. If an obligation was closed in error or never was submitted to Obligation Warehouse, upon failure to settle it should be matched in the Obligation Warehouse system. The central repository of failed obligations in the Obligation Warehouse system are maintained until closed by settlement completion or canceled through bilateral agreement.

As a best practice, enter bilateral submissions for obligations that have failed to settle and were not previously entered using Obligation Warehouse on SD + 1.

6.1.6.3 Comparison Only Submissions

Comparison Only trades are not supported by Obligation Warehouse and should be matched in CMU RTTM.

6.2 Output Source

The following sections provide the output source information.

6.2.1 MQ Messages

Obligation Warehouse uses the MT509 Status, and MT518 Confirmation, ISO 15022 MQ messages for communication outbound to members. Additionally, the MT598 reject message and MT599 Administrative messages are used. For more information, review the Participant MQ Messaging Specification document available in the Obligation Warehouse Technical Documents page of the DTCC Learning Center.

6.2.2 AutoRoute Files

Obligation Warehouse utilizes AutoRoute files for intraday positions, end of day positions, and Cash Adjustments due to Mandatory Reorganizations. Members may request AutoRoute files by contacting their Client Support at 1-888-382-2721, option 2, then option 4. All times in the following table are in Eastern Time. After logging in to the Learning Center, expand the section in the Obligation Warehouse Technical Resources page to access the file formats.

AutoRoute Product ID #	Name	Output Times
02050703	Intraday and End of Day Position MRO (AutoRoute Product ID: Production 02050703, PSE Test 02980703)	Intraday 16:00 (4 P.M.) and EOD approximately 19:00 (7 P.M).
02051658	Cash Adjustments for Mandatory Reorg. File (AutoRoute Product ID: Production 02051658 / PSE TEST 02981658)	Cycles daily, beginning at SOD approximately: • 21:00 (9 P.M.) • 10:30 (A.M.) • 12:30 (P.M.) • 14:30 (2:30 P.M) • 16:45 (4:45 P.M.)
02051967	Obligation Warehouse Pair Off Activity MRO (AutoRoute Product ID: Production 02051967 / PSE Test 02981967)	Intraday 17:30 (5:30 P.M.)
02980703 Test	Intraday and End of Day Position MRO (AutoRoute Product ID: Production 02050703 / PSE Test 02980703)	Intraday 16:00 (4 P.M.) and EOD approximately 19:00 (7 P.M.).
02981658 Test	Cash Adjustments for Mandatory Reorg. File (AutoRoute Product ID: Production 02051658/ PSE TEST 02981658)	Two cycles daily, SOD approximately 21:00 (9 P.M.) and 14:00 (2 P.M.).

6.2.2.1 Intraday and End of Day Position Files

The Intraday Position Machine Readable Output (MRO) is produced daily at 16:00 (4 P.M.) Eastern Time. Many firms use the Intraday Position file to reconcile and prepare for the CNS eligibility check at 17:00 (5 P.M.) Eastern Time. The End of Day MRO is created at the close of all processing for a given business day, usually about 19:00 (7 P.M.).

6.2.2.2 Intraday and End of Day Position File Layouts

The Intraday and End of Day Position files share the same AutoRoute Product ID's and file layouts. In the AutoRoute header record in position 54-55, the Intraday Position file is noted as Cycle 1, whereas the End

of Day Position file is Cycle 99.

This file contains a snapshot of all unmatched, open, pending delivery, pending cancel, and closed today obligations stored in the Obligation Warehouse. The new field and values are highlighted in red. Download the **Intraday and End of Day Position MRO (AutoRoute Product ID: Production 02050703, PSE Test 02980703)** file, along with other layout files, available in the Obligation Warehouse Technical Resources page after you login to the DTCC Learning Center.

6.2.2.3 Cash Adjustments for Mandatory Reorg. File

Oblidation Warehouse runs maintenance on OPEN obligations five times daily at the start of the processing day (SOD, about 21:00 (9:00 P.M.), 10:30 (A.M.), 12:30 (P.M.), 14:30 (2:30 P.M.), and 16:45 (4:45 P.M.) Eastern Time) to make adjustment when the underlying security has had a mandatory corporate action event. When the mandatory corporate action event occurs, Obligation Warehouse produces a file to indicate the fail clean up and new money created in the transformation. All cash adjustments correspond to the DTC Money Settlement Code 21 seen the same day, except for the Cycle 5 cash adjustments that appears on the following business day. Download the **Cash Adjustments for Mandatory Reorg. File (AutoRoute Product ID: Production 02051658)** file, along with other layout files, available in the Obligation Warehouse Technical Resources page after you login to the DTCC Learning Center.

6.2.3 Obligation Warehouse Pair Off Activity MRO File

Obligation Warehouse processes the Pair Off of Open obligations daily, immediately after the eligibility check for CNS, (approximately 17:15 (5:15 P.M.) Eastern Time). Upon completion of the Obligation Warehouse Pair Off process the output is produced. The machine-readable output (MRO) version of the Obligation Warehouse Pair Off Activity file is distributed upon completion.

Download the **Obligation Warehouse Pair Off Activity MRO (AutoRoute Product ID: Production 02051967, PSE Test 02981967)** file, along with other layout files, available in the Obligation Warehouse Technical Resources page after you login to the DTCC Learning Center.

6.2.4 Obligation Warehouse Web

Every time an action has taken place in the Obligation Warehouse system the obligation is updated in real-time on the Obligation Warehouse Web. The Obligation Warehouse Web page detail view also has a history button to see each iteration, in the life cycle of an obligation.

The Obligation Warehouse Web Report Center provides a report view of the output files. The Intraday and End of Day Position files are divided into more specific sections. The report is defined as follows:

- Uncompared—(UNC, UNPA, DKPA, DKUN)
- OPEN-(OPEN status only)
- Pending—(OPPA, PCPA, PCAN, RCPA)
- Closed—(CLSD, MKDL, CANC)
- RECAPS-(OPEN and Closed on RECAPS day)
- Corporate Actions-(OPEN and Closed on day of event.)
- Pair off Activity-(OPEN and Closed on day of event.)

7. PROCESS RULES

This section explains the process rules for submitting an obligation. It also describes statuses and don't know (DK) actions.

7.1 Submitting Obligations

Members can enter obligations into Obligation Warehouse as a bilateral submission using either an MQ messaging MT515 Trade Submission record or Obligation Warehouse Web Obligation Entry page.

7.1.1 Mandatory Fields for Bilateral Submissions

The following table shows the mandatory fields for bilateral submissions:

Field Name	Description	Required For MQ	Required for Obligation Warehouse Web	Matching Criteria
Xref	Cross-reference identifier sourced by the firm entering.	Yes	Yes	No
Trade Date	Date of trade**	Yes	No	No
Settlement Date	Settlement date.	Yes	Yes	Yes
CUSIP	Identification of underlying security.	Yes	Yes	Yes
Quantity	Number of equity shares, UIT units or face amount of bonds	Yes	Yes	Yes
Final Money Amount*	Amount of US dollars paid at settlement.	Yes	Yes	Yes
MPID (receiver and/or deliverer)	Alpha identifier of executing broker the transaction used by clearing members.	No	No	If populated, yes
Contra	Clearing member NSCC number.	Yes	Yes	Yes
Receiver/Deliverer	Entering Member identifies their perspective of the transaction and the Contra has the opposing side.	Yes	Yes	Yes
X-CNS indicator	Marks an obligation to be excluded from CNS Settlement.	No (default is no)	No (default is no)	If populated, yes
X-RECAPS	Marks an obligation to be excluded from the RECAPS process	No (default is no)	No (default is no)	No
X-REORG	Marks an obligation to be excluded from transformation in the event of a mandatory Reorg.	No (default is no)	No (default is no)	No

*The money tolerance for a comparison is $5 per million of the Final Money Amount.

**If the trade date was unknown and submitted through MQ message as 12/31/9999 or entered on Obligation Warehouse Web input as blank; both file output and the Obligation Warehouse Web Trade Details are blank.

7.1.2 Timing of Submissions for Matching

The following timing of submissions into Obligation Warehouse for matching has been defined by the SIFMA SOS Obligation Warehouse Best Practice Committee:

- Bilateral submissions for comparison (101 Confirmations) should be entered on the trade date, no later than 6:30 (A.M.) Eastern Time on TD +1. As per the industry best practices the trade date, if known, should be populated with a valid business date. If the trade date is unknown, enter a blank through Obligation Warehouse Web or default value of 12/31/9999 through MQ. Trade dates submitted using blanks or default values result in output on the Obligation Warehouse Web and Obligation Warehouse Position file as blank values. MQ messaging continues to use the default value of 12/31/9999 in the Trade Date field if the blank or default was submitted on the Comparison Request input.
- Bilateral submissions for obligations which have failed to settle and were not previously entered into the Obligation Warehouse should be entered on SD + 1.
- Prime broker items should be submitted to Obligation Warehouse after a fail has occurred. Obligation Warehouse does provide for a window of opportunity on the afternoon (1:00 P.M. to 5:00 P.M. Eastern Time) of trade date + two days to match prime broker trades, which could then be sent to CNS. However, if a prime broker submission remains uncompared after settlement date, the item remains as uncompared until matched or canceled from Obligation Warehouse.

7.1.3 Retaining Uncompared Submissions

Uncompared submissions in the Obligation Warehouse system remain available for comparison until matched or canceled from Obligation Warehouse, regardless of whether the settlement information has been posted on the submission. If a member, named as one of the contra-parties to an uncompared obligation, undergo a participant swing, the comparison request is deleted as part of the Participant Swing process. Uncompared obligations where the underlying CUSIP has had a corporate action event should be canceled by the instructing party.

7.2 Uncompared Status (UNC)

Review this section to learn about the uncompared status (UNC).

7.2.1 Available Actions for Uncompared Submissions

When the Obligation Warehouse has receives an instruction for comparison request by the submitter, the contra is immediately notified with a comparison advisory. Responses for a Comparison Advisory request are:

- Agree to match the comparison by one of the following ways:
  - Affirm using Obligation Warehouse Web
  - Send MT515 Instruct message with like details, or
  - Send MT515 Modify message to align an outstanding submission so the obligation details match.
- Disagree to match the comparison request
  - DK through Obligation Warehouse Web identifying the appropriate DK reason on the drop-down menu

  - DK using an MT515 DKUN message and include the DK reason code. See DK of Comparison (DKUC) Requests and Obligation Warehouse Appendix A: Code Tables in the Participant Interactive Message Specifications section.
- Cancel comparison request
  - Cancel on Obligation Warehouse Web using action pull down menu
  - Submit MT515 Cancel message, use of notes suggested.

Delivery information can also be processed on an uncompared submission in the Obligation Warehouse system. Available actions are:

- Accept Delivery and the delivery information is reflected as:
  - UNCP—Uncompared with full or partial delivery completed.
  - UNPA—Uncompared with a pending delivery acceptance for either a full or partial delivery.
  - CLSD—the uncompared prime broker transaction was closed due to full delivery being completed.
- Not Accepting the Delivery of an uncompared submission, does not remove the Comparison Advisory.
  - UNCP—The delivery advisory was DKed by the contra.

7.2.2 Automated Actions Taken by Obligation Warehouse on Uncompared Submissions

Obligation Warehouse performs regular maintenance on the Obligation Warehouse repository. Primarily an obligation must be in an OPEN status; however, sometimes it is necessary to affect an uncompared submission.

- Administrative close—When needed, Obligation Warehouse closes uncompared obligations and lists a reason code in the notes field.
- Participant Swing—When outstanding comparison requests are present, the uncompared obligations is marked for deletion. Members should resubmit comparison requests using the new member number.
- Mandatory Reorg.'s—Uncompared obligations are not transformed; therefore, members should cancel and rebook the submission.
- Closed Sent to CNS—Uncompared obligations are never eligible for CNS.
- RECAPS—Uncompared obligations are not included in the RECAPS process.
- Pair off—Uncompared obligations are unavailable for pair off. Indicators for pair off preference should be marked only on matched obligations.

7.3 Don't Know (DK) Actions

The Don't Know (DK) action provides a way for advisories to be acknowledged with a response indicating that there is a discrepancy. Numerous DK reason codes have been defined to assist in the communication around a DK response. A DK can be applied to one of three types of advisories: Comparison, Delivery, and Cancel.

7.3.1 DK Purge Rules

The DK of a comparison is active in the Obligation Warehouse system for five business days. On the fifth business day, as part of end of day processing, the uncompared obligation in a DK status is marked for deletion, which is a terminal state.

When a cancel or delivery request of a matched obligation has the response of DK from the contra, the obligation remains in the previous status. DKs for cancel or delivery requests do not age.

7.3.2 DK of Comparison (DKUC) Requests

When the contra does not know or agree with the Comparison Advisory request received, the action for the obligation should be a DK. DK is available on both the Obligation Warehouse Web or using an MT515 DKUC message.

If a Comparison Advisory is DKed, the parties to the obligation have five business days (action date, plus four business days) to resolve the DK before it is purged from Obligation Warehouse. Delivery information can still be accepted on an obligation while the Comparison DK is in dispute.

The following table shows the reason codes for Don't Know Uncompared (DKUC) requests:

Reason Code	Description
E104	Invalid Security
E105	Bad Quantity
E106	Bad Trade Date
E107	Bad Settlement Date
E109	Bad Amount
E110	Bad Buyer (Receiver) Party
E111	Bad Seller (Deliverer) Party
E127	Duplicate Record
E152	Matched Comparison Only
E154	We know as Customer
E156	We know as Contract
E158	We know settles Foreign market
E160	We know as Prime Broker
E162	We know as Syndicate
E164	No/Incorrect MPID
E166	Trade changed to clear CNS
E168	Invalid CUSIP identified
E170	Not Prime Broker
E199	Other Bad Data

7.3.3 DK of Cancel (DKCN) Requests

When the contra does not know or agree with the Cancel Request received, the action for the obligation should be a DK. DK is available on both the Obligation Warehouse Web or using an MT515 DKCN message. The following table shows the reason codes for Don't Know Cancel (DKCN) requests:

Reason Code	Description
E304	Invalid Security
E305	Bad Quantity
E306	Bad Trade Date
E307	Bad Settlement Date
E309	Bad Amount
E310	Bad Buyer (Receiver) Party
E311	Bad Seller (Deliverer) Party
E327	Duplicate Record
E352	Unknown cancel (cancel request)
E354	Still Open
E356	Corporate Action Item
E358	ACATS Reversal in process
E360	Unknown Cancel for Foreign item
E362	Wrong OW Control Number
E391	Previous Settlement
E399	Other Bad Data

7.3.4 DK of Delivery (DKDL) Requests

When the contra does not know or agree with the Delivery Notification Request received, the action for the obligation should be a DK.

Note

The term delivery is used whether you are delivering or receiving the settlement information.

DK is available on both the Obligation Warehouse Web or through an MT515 DKDL message. The impact of applying a DKDL:

- Uncompared, Pending Acceptance (UNPA) returns to UNCP status
- DK, Pending Acceptance (DKPA) returns to DKUN status
- Open, Pending Acceptance (OPPA) returns to OPEN status
- Pending Cancel, Pending Acceptance (PCPA) returns to PCAN status.

The following table shows the reason codes for Don't Know Delivery (DKDL) requests:

Reason Code	Description
E504	Invalid Security
E507	Bad Settlement Date
E509	Bad Amount
E510	Bad Buyer (Receiver) Party

Reason Code	Description
E511	Bad Seller (Deliverer) Party
E552	Previous settlement
E554	Settlement type error
E556	Securities not received
E558	Duplicate delivery
E560	Still Open
E562	We know settled DLVR
E564	Future Settlement date
E566	Need Paperwork
E568	Bad denominations
E570	Need Medallion stamp
E572	Wrong partial amounts (quantity, value)
E574	Reclaim-received partial
E576	No agent/unable to transfer
E578	Settlement date difference
E580	Wrong OW Control Number
E582	Wrong Quantity
E584	Wrong Security
E586	Corporate Action item
E599	Other Bad Data

7.3.5 DK of Reclaim (DKRC) Requests

When the contra does not know or agree with the Reclaim of a Delivery Notification Request received, the action for the obligation should be a DK.

Note

The term delivery reclaim is used whether you are delivering or receiving the settlement information.

DK is available on both the Obligation Warehouse Web or using an MT515 DKRC message. The result of DK of a reclaim request:

- Leave an uncompared obligation in UNCP status
- Leave an open obligation in OPEN status if it was a partial Reclaim
- Return a closed obligation to its previous CLSD status

The following table shows the reason codes for Don't Know Reclaim (DKRC) requests:

Reason Code	Description
E704	Invalid Security
E705	Bad Quantity
E707	Bad Settlement Date
E709	Bad Amount

Reason Code	Description
E710	Bad Buyer (Receiver) Party
E711	Bad Seller (Deliverer) Party
E727	Duplicate Record
E762	Wrong OW Control Number
E793	Settlement Type Error
E799	Other Bad Data
E704	Invalid Security

7.4 Cancel Status (CANC)

Uncompared obligations can be unilaterally canceled by the submitter either using Obligation Warehouse Web or an MT515 CANC message. Canceling an uncompared obligation is considered a terminal status and cannot be reversed.

7.5 Marked for Delete Status (MKDL)

Obligation Warehouse uses a single record database, where the deliverer's (seller's) OW ID number and obligation details are used upon matching. When the match occurs, the receiver's (buyer's) side is marked for delete (MKDL) and replaced with the deliverer's information. A marked for delete an uncompared obligation is considered a terminal status and cannot be reversed.

7.6 Open Status

When obligations are in the OPEN status, the comparison has been agreed to by both parties and several automated processes can be applied to the obligation.

- CNS eligibility check, daily at 17:00 (5 P.M.) Eastern Time.
- Specified mandatory corporate action events, 5 times daily: (21:00 (9 P.M.), 10:30 (A.M.), 12:30 (P.M.), 14:30 (2:30 P.M.), and 16:45 (4:45 P.M.) Eastern Time).
- Sent to IMS, daily for users of Auto DO process for DTC Settlements.
- RECAPS, at 18:00 (6 P.M.) Eastern Time periodically as announced by the important notice.
- Pair offs, daily at completion of CNS eligibility check, except for RECAPS days.
- Participant Swing, as needed.

Obligations in OPEN status require bilateral agreement to close or cancel.

Additionally, obligations in an OPEN status and delivered through DTC Settlement with the OW Control Number included in the appropriate field are automatically closed when the settlement completion occurs. When the made settlement completes at DTC the information is passed to Obligation Warehouse using the OW Control Number identified on the delivery order. Once received, the Obligation Warehouse verifies the information against the Obligation Warehouse database and if in agreement closes the obligation. If the obligation was only partially settled, Obligation Warehouse decreases the quantity and final money amounts as noted on the delivery message.

Obligations where the bilateral agreement is needed to accept the Delivery Notification Request or Cancel Request, change the status of the OPEN obligation to OPPA and PCAN, respectively.

Other acceptable modifications to an obligation in OPEN status include the inclusion or removal of X-CNS, X-RECAPS and X-REORG indicators. Each party to the obligation has control of their obligation to withhold from one of the automated functions of CNS, RECAPS, or Obligation Warehouse specific mandatory reorganizations (REORG.)

7.7 Open, Pending Acceptance (OPPA)

When an obligation was in an OPEN status and either the deliverer or receiver wants to update the obligation for the settlement of a part or all the quantity and final money amount, a delivery action is submitted through the Obligation Warehouse Web or MT515 DLRQ message. When in the OPPA status, an obligation cannot be closed and sent to CNS, RECAPS, or REORG.

The Delivery Notification Request is presented to the contra as a Delivery Advisory to be accepted to close a portion or all the obligations (if full delivery). The new status created is Open Pending Acceptance of delivery or OPPA.

The Delivery Notification Request can be canceled by Obligation Warehouse if a settlement has been completed through DTC Settlement, and it included the OW Control Number in the appropriate field. The OPPA status is then removed and the pending delivery notification is canceled and the obligation is closed, due to a delivery.

7.7.1 Automated Actions Taken by Obligation Warehouse on Obligations in Pending Statuses

Obligation Warehouse maintains the repository for various actions; most times an obligation must be in an OPEN status; however, sometimes it is necessary to affect an obligation in a “Pending” status. Pending statuses include: OPPA, PCAN, PCPA, and RCPA.

- Administrative close—When needed, Obligation Warehouse closes any obligation, regardless of status, and lists a reason code in the notes field. Members can use the Obligation Warehouse EOD Position file, MQ messages, or both to identify obligations deleted due to administrative action.
- Participant Swing—When outstanding comparison requests are present, the matched compared obligations remain pending. Members should cancel the obligations in the old number prior to the Swing. Upon effective date of the swing. The member should resubmit comparison requests using the new member number.
- Mandatory Reorg.’s—Matched obligations in a pending status are not transformed; therefore, members should cancel and rebook the submission.
- Closed Sent to CNS—Obligations in matched pending statuses are never eligible for this action.
- Pair off—Obligations in matched pending statuses are never eligible for this action.
- RECAPS—Obligations in matched pending statuses are not included in the RECAPS process.

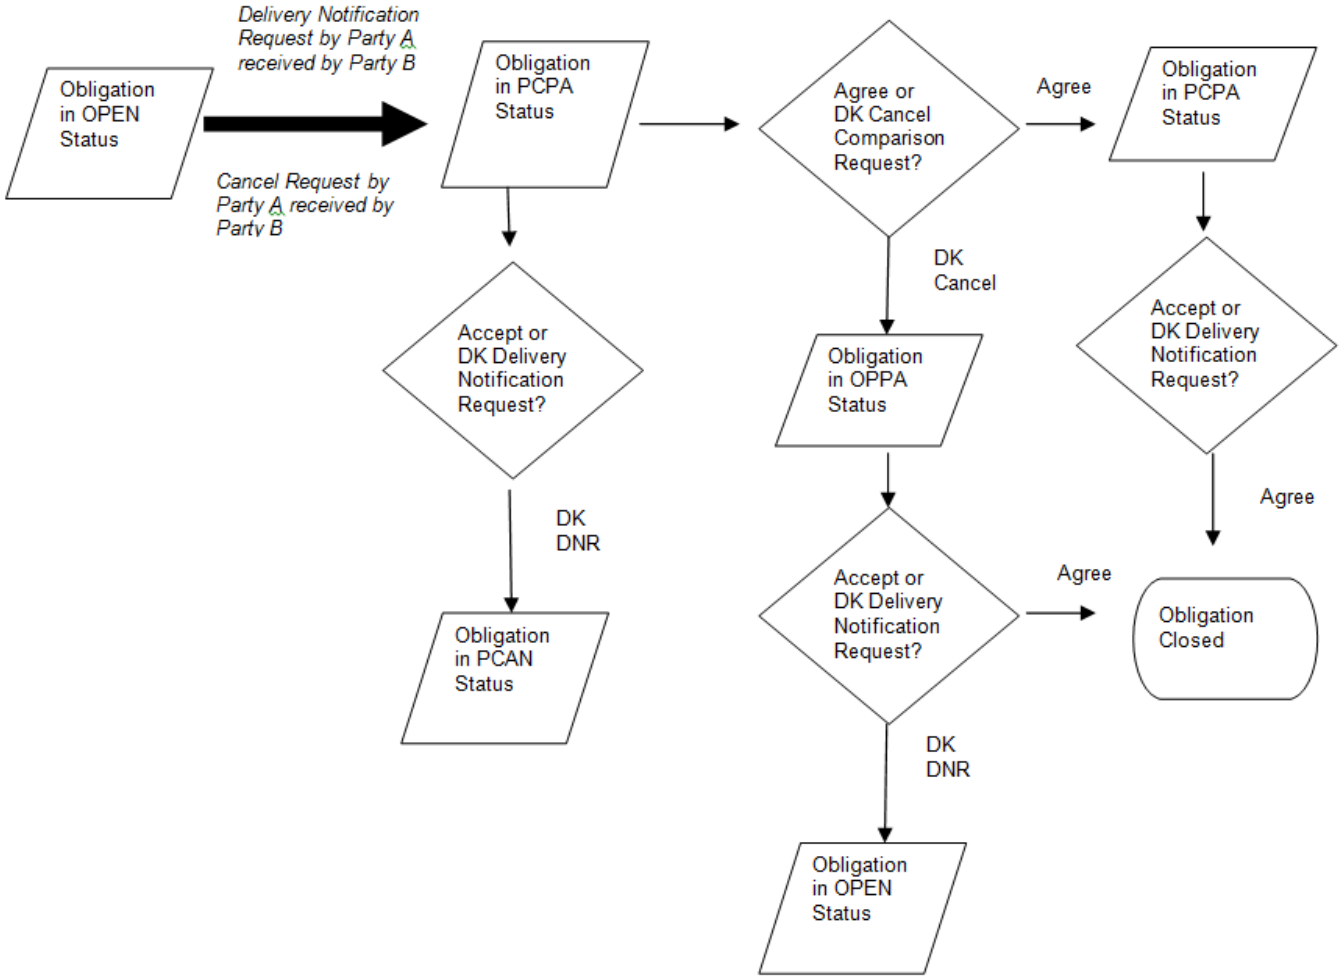

7.8 Pending Cancel (PCAN)

The Pending Cancel (PCAN) status is available for a matched obligation and is the result of one party to the obligation requesting to cancel. Additionally, an obligation can return to the PCAN if a delivery notification request has DK’ed the delivery advisory. The obligation went from PCPA to PCAN status.

7.9 Pending Cancel, Pending Acceptance (PCPA)

The obligation in a Pending Cancel, Pending Acceptance (PCPA) status requires two approvals to either: cancel, close, or return the obligation to an OPEN status. PCPA is a composite status and requires communication between the parties to the obligation to be effective in achieving the goal of closure.

The Pending Cancel portion of the status refers to the comparison. The requesting member is asking to cancel the comparison. The responding member can agree, resulting in a canceled comparison; however, the settlement portion of the obligation has an outstanding delivery notification request that must be DK'ed or accepted.

7.10 Closed Status (CLSD)

Obligations become closed due to systemic processing, such as Administrative Action, Participant Swing, RECAPS, Reorganizations, Sent to CNS, or a DTC Settlement (IMS, NYW, and ESS), where the Obligation Warehouse control number is included.

Members bilaterally agreeing to the completion of settlement in the Obligation Warehouse system use a Delivery Notification Request for a matched obligation, or an unmatched obligation marked as prime broker.

If a reclaim request were submitted within two days of the original closed due to delivery and the contra DKed the advisory, the obligation returns to a closed status.

7.11 Reclaim, Pending Acceptance (RCPA)

Obligations that were settled and closed within the previous two business days can be reclaimed through Obligation Warehouse with bilateral acceptance or DTC Settlement and return to an OPEN status.

When a member requests the reclaim action through Obligation Warehouse, the contra receives a Reclaim Advisory and the obligation is in a Reclaim, Pending Acceptance (RCPA) status until the reclaim acceptance has been made. If the reclaim request is bilaterally agreed upon, the obligation moves to an OPEN status. If a reclaim request is DK'ed, the obligation returns to the CLSD status. If the reclaim request ages past two days, it is administratively returned to a CLSD status.

8. STATUS AND RELATED ACTIONS

The following table shows the available actions for each status of the life of an obligation. The settlement actions are listed after the available actions used for comparison.

Obligation Warehouse Status	Available Actions by Members
Uncompared (UNC)	• Affirm • Modify • DK • Cancel • Include for RECAPS • Exclude for RECAPS • Include for REORG • Exclude for REORG • Include for CNS • Exclude for CNS
	Settlement Actions: Deliver or Reclaim through IMS, NYW, ESS.
Uncompared Pending Acceptance	• Affirm • DK • Include for RECAPS • Exclude for RECAPS • Include for REORG • Exclude for REORG • Include for CNS • Exclude for CNS
	Settlement Actions: • Deliver • Accept • Cancel delivery • DK delivery

Obligation Warehouse Status	Available Actions by Members
DK Uncompared	• Modify • Cancel • Delete due to DK • unDK • Include for RECAPS • Exclude for RECAPS • Include for REORG • Exclude for REORG • Include for CNS • Exclude for CNS (Matching criteria)
	Settlement Actions: Deliver through IMS, NYW, ESS
DK Pending Acceptance	• unDK • Cancel • Modify • Include for RECAPS • Exclude for RECAPS • Include for REORG • Exclude for REORG • Include for CNS • Exclude for CNS
	Settlement Actions: Accept Deliver (any method), DK delivery request
Cancel (uncompared)	None
Marked for Delete	Settlement Actions: None

Obligation Warehouse Status	Available Actions by Members
Open (compared)	Cancel • Include for RECAPS • Exclude for RECAPS • Include for REORG • Exclude for REORG • Exclude for CNS • Include for CNS (If not previously matched with X-CNS= yes) • Include for Pair offs • Exclude for Pair offs
	Settlement Actions: • Deliver • Accept delivery • DK delivery • Reclaim (any method)
Open Pending Acceptance	Cancel • Include for RECAPS • Exclude for RECAPS • Include for REORG • Exclude for REORG • Exclude for CNS • Include for CNS (If not previously matched with X-CNS= yes) • Include for Pair offs • Exclude for Pair offs
	Settlement Actions: • Delivery Request • DK Delivery • Reclaim (partial) • DK Reclaim

Obligation Warehouse Status	Available Actions by Members
Pending Cancel	• Affirm • Cancel • Un-Cancel • Include for RECAPS • Exclude for RECAPS • Include for REORG • Exclude for REORG • Exclude for CNS • Include for CNS (If not previously matched with X-CNS= yes) • Include for Pair offs • Exclude for Pair offs
	Settlement Actions: • Accept Delivery • DK Delivery
Pending Cancel Pending Acceptance	• Affirm • Cancel • Un-Cancel • Include for RECAPS • Exclude for RECAPS • Include for REORG • Exclude for REORG • Exclude for CNS • Include for CNS (If not previously matched with X-CNS= yes) • Include for Pair offs • Exclude for Pair offs
	Settlement Actions: • Accept Delivery • DK Delivery • Reclaim (partial) • DK Reclaim
Closed	Reclaim
Reclaim Pending Acceptance	**Settlement Actions**: • Accept Reclaim • DK Reclaim

If full delivery occurs before an obligation matches with the Contra, comparison can only happen if the Seller's comparison amount and the full delivery amount posted in the Obligation Warehouse system are within the tolerance limits of $5 per one million in final money amount. If the amounts are outside the tolerance limits then the obligation must be canceled and booked again.

8.1 Obligation Status: Obligation Warehouse Web, MQ Messages, File Output

In the previous section, the statuses of Obligation Warehouse have been discussed and actions to move from one status to the next. The following table shows a mapping of each status and the most common related business events. The business events coupled with the status fully describe what new action is available to the obligation.

Obligation Status	Obligation Warehouse Web		MQ Message		File Output	
	Status	Business Event	Status	Business Event-Reason code	Status	Business Event

9. AUTOMATED FUNCTIONS

The Obligation Warehouse repository performs periodic maintenance on obligations held.

9.1 CNS Eligibility Check

At 17:00 (5 P.M.) Eastern Time each day, the Obligation Warehouse service checks all the open matched obligations with a settlement date of SD-1 day or older to determine if the item is eligible for continuous net settlement in the CNS system. Upon completion of the CNS eligibility check, an MQ administrative message is sent to participants and the Obligation Warehouse Web is updated.

If eligible for CNS, the obligation is closed and sent to CNS automatically following the completion of the daily scan for CNS-eligible items. An MQ message is sent to the participant, the Obligation Warehouse Web updated in real-time and the close reported on the Obligation Warehouse EOD Position MRO file.

Note

Same day settlement through CNS is currently unsupported.

If an obligation is eligible for CNS and, therefore, closed in the Obligation Warehouse system and sent to CNS, it appears on the CNS Miscellaneous Activity Report (AutoRoute Product ID 02042008 for MRO and 02040001 for print image) and on the NSCC Settlement Activity (Code 15).

Obligations that are closed in the Obligation Warehouse system and sent to CNS are included in the NSCC guarantee on the night after settlement. If an obligation is marked with exclude from CNS (X-CNS = yes) by either party, it cannot be closed and sent to CNS.

9.2 Mandatory Reorganization Events

The Obligation Warehouse service processes mandatory reorganization events only for open matched obligations. On the date of the action, the open obligation in the Obligation Warehouse service is closed, and the calculated amount is opened in the new security. MQ messages are generated and sent to the participants for each of the actions, indicating both the closing of the old obligation and opening of the new obligation. Likewise, the Obligation Warehouse Web is updated in real-time to reflect the application of mandatory reorganization events. The cross-reference (Xref) number is retained from the old obligation to the new to maintain the relationship between the obligation closed and its new replacement.

Only whole quantity amounts are used in calculating for mandatory reorganization events. Any cash component calculated on the new securities and all fractional quantities are paid through the DTC Money Settlement using Code 21.

Obligations marked as exclude from Reorganization, (X-REORG = yes) are not transformed by Obligation Warehouse and remain the responsibility of the member. The following table shows how the Obligation Warehouse effects obligations on the allocation start date for the mandatory reorganization events:

#	Reorg. Event	Obligation Warehouse—applied on:	Cash Component applied on:
71	Stock Merger	Allocation date	Allocation date (Only one to one Round up or Round down)
72	Cash Merger	Allocation date	Allocation date
75	Corp Bond Full Call	Allocation date	Allocation date
77	Muni Bond Full Call	Allocation date	Allocation date
91	Name Change	Allocation date	N/A

**Only forward splits, identified by Code 02, and not reverse splits, are applied in the Obligation Warehouse.

9.2.1 Mandatory Reorg Events Applied to ACATS Transactions in the Obligation Warehouse

ACATS transactions in the Obligation Warehouse are converted on the allocation date only. Any ACATS items received by Obligation Warehouse after the allocation date must be canceled and reinstated by participants.

9.2.2 Examples of Mandatory Reorg. Events in the Obligation Warehouse system

The following section provides examples for the mandatory reorg events in the Obligation Warehouse system.

'71 Stock Merger

Definition: Stock merger whereby one stock share is converted to another, known as one to one.

Example: One to One

Old	US Equity CUSIP 97653G100	50,000 shares
New	US Equity CUSIP 589644113	Pay rate = .5

Obligation Warehouse Actions

1. Close the old obligation in the Obligation Warehouse system.

Quantity	50,000	Final Money	$ 47,500.00
Calculate new obligation shares * pay rate = new quantity			
50,000 * .5 = 25,000		Final Money	$ 47,500.00

Note

No changes occur in the DTC Settlement account.

’72 Cash Merger

Definition: Stock liquidates to cash.

Example:

US Equity CUSIP US 8837004829 Pay rate: 100.00

Obligation Warehouse Actions

1. Close the old obligation in the Obligation Warehouse system.

   Quantity 550 shares Final Money $ 52,662.50
   Calculate cash 550 * 100.00 = $ 55,000.00

2. Calculate the cash difference.
   Final Money closed–Cash Adjustment = Cash difference
   $55,000-$52,662.50 = $2,337.50

DTC Settlement

Closeout	Receiver	Deliverer
	Dr. $ 52,662.50	Cr. $ 52,662.50
	Cr. $ 55,000.00	Dr. $ 55,000.00
Total Cr. $ 2,337.50		Total Dr. $ 2,337.50

’75 Corporate Bonds—Full Call and ’77 Municipal Bonds—Full Call

(All treated similarly)

Definition: A bond liquidates to cash.

Example:

US Equity CUSIP 02585TBQ7 Pay rate: 1000.00

Obligation Warehouse Actions

1. Close the old obligation in the Obligation Warehouse system.

   Quantity 5,000 Final Money $ 5,006.33
   Calculate Cash Adjustment Quantity * pay rate = Cash Adjustment
   5,000 * 1000 = $ 5,000.00

2. Calculate the cash difference.
   Final Money closed–Cash Adjustment = Cash difference
   $5,000.00-$5,006.33 = $6.33

DTC Settlement

Closeout	Receiver	Deliverer
	Dr. $ 5,006.33	Cr. $ 5,006.33
	Cr. $ 5,000.00	Dr. $ 5,000.00
Total Cr. $ 6.33		Total Dr. $ 6.33

‘91 Name Change

Definition: A stock changes name

Example:

US Equity CUSIP

Obligation Warehouse Actions

1. Close the old obligation in the Obligation Warehouse system.

   Quantity 100 Final Money $ 15,026.32
   Calculate Cash Adjustment Quantity * pay rate = Cash Adjustment
   5,000 * 1000 = $ 5,000.00

2. Open a new obligation in the Obligation Warehouse system.

   Quantity 100 Final Money $ 15,026.32

Note

No changes occur in the DTC Settlement account.

9.2.3 Other Corporate Action Events

An obligation in the Obligation Warehouse system that is undergoing a corporate action event (outside of the Obligation Warehouse automation) should be identified as Delivered and the Participant Notes field populated with the appropriate event code. The best practice is to mark these items as Delivered, not canceled until the Closed business event is added to Obligation Warehouse.

Note

The Delivered business event requires the bilateral agreement of the contra-side. The attempt to close-out the obligation for the corporate action event should begin on the allocation date and be completed no later than the effective date. It is also preferable to simultaneously set up the new obligation upon closure and reference the previous obligation in the Participant Notes field.

9.3 RECAPS

The Reconfirmation and Pricing Service (RECAPS) process runs automatically from the Obligation Warehouse repository, without separate batch input. A schedule of RECAPS dates is published in advance by Important Notice.

Obligations in an OPEN status that have a settlement date of at least two days prior and are not marked as exclude from RECAPS are considered for the RECAPS process. At the close of business 18:00 (6:00 P.M.) Eastern Time on RECAPS day, each obligation eligible for the RECAPS process is closed, repriced, if appropriate, renetted, allotted, and a new obligation opened with the next business day's settlement date.

The following reasons could mean that the obligations in an OPEN status, but not included in RECAPS:

- CUSIP is a mutual fund
- CUSIP is when-issued
- CUSIP undergoing a corporate actions event, either voluntary or mandatory
- Receiver and deliverer of the obligation are equal

The repricing of a security can only take place if the price available on DTC Central Pricing database has been updated in the last five business days. MQ messages are generated, Obligation Warehouse Web updated, and Obligation Warehouse EOD Position MRO file distributed.

Where a one-to-one relationship can be identified for a RECAPS item, other than obligations that are netted, the cross-reference (Xref) number is retained for ease in reconciliation. Obligations that were originally marked trade-for-trade are not multilaterally netted or allotted.

The following reasons include why an obligation may not be netted or allotted:

- Pricing on the Central Pricing database equals $ 0.00
- Pricing on the Central Pricing database is older than 5 days
- CUSIP is a municipal bond
- Obligation has a fractional quantity
- Obligation is in baby bonds
- Obligation in globally locked securities

The bilateral netting process uses obligations with the same contra-parties in the same CUSIP that are marked trade for trade at the CUSIP level, but are not globally locked securities and nets them together to one obligation during the RECAPS process.

The multilateral netting process nets together multiple obligations across members to create one record per issue. The algorithm uses round lots first for netting. Obligations in trade for trade CUSIPS only can bilaterally net, not multilaterally.

Items that are identified as exclude from RECAPS in the Obligation Warehouse system are ineligible for the RECAPS process. Participants have the capability to exclude an obligation from the RECAPS process by flagging the item with X-RECAPS at any time.

Cash Adjustments created from the RECAPS process are sent in total to DTC Money Settlement as a Code 20 on the settlement statement.

9.4 Participant Swings

Situations when a member moves positions from one NSCC account to another due to a merger or other reasons are addressed automatically by the Obligation Warehouse Web system. All obligations in an OPEN status in the decommissioned number are closed and a new matched obligation opened in the new NSCC account number. The cross-reference number is retained from the old obligation to the new one. Uncompared items in the old number are marked for delete, requiring the member to rebook in the new NSCC account number.

Obligations in any status, other than OPEN, are not swung over by Obligation Warehouse. It is the responsibility of the member to close all obligations in the old number that are not included in the swing.

The Participant Swing function occurs during the start of day processing on the effective date and is applied for 90 calendar days. MQ messages are generated and sent for all business events, the Obligation Warehouse Web reflects the changes and the Obligation Warehouse EOD Position MRO file contains both the closed and opened items.

When a participant swing is applied in the Obligation Warehouse system and the night delivery orders (NDO's) have already been sent to DTC for delivery, DTC rejects the DO's queued for delivery in the clearing number affected. Participants are required to address the deliveries that were rejected on a manual basis for the decommissioned NSCC number.

9.5 Administrative Action

NSCC reserves the right to administratively close/delete an obligation when deemed necessary and include the reason in the notes field.

One example is that of obligations where the quantity or final money amount equal to zero are regularly closed by administrative action. The Administrative Close/Delete is noted on Obligation Warehouse Web, MT509 messages and Obligation Warehouse Position files as DEAD for uncompared and CADM for compared obligations.

9.6 Using Auto DOs

Some members have elected to use an automated process that allows Obligation Warehouse to send obligations that are settlement date less one or settlement date less two days in preparation for DTC Settlement to occur. When the obligation in an OPEN status has been sent to DTC for settlement using the auto delivery order (DO), the business event indication is SIMS (Sent to the Inventory Management System).

Obligations in an OPEN status where the business event is SIMS are ineligible for CNS, RECAPS, or REORG.

Auto DOs are used for NSCC Balance Orders, ACATS to streamline the processing. The auto DO contains the Obligation Warehouse control number so that when the DTC Settlement has completed, the information is communicated to Obligation Warehouse to close the obligation.

If the auto DO is temporarily dropped or canceled out of DTC Settlement, the member must update the obligation in the Obligation Warehouse system by canceling and rebooking it.

Features are being added that complete the communication from DTC Settlement back to Obligation Warehouse in the event the IMS settlement is permanently dropped, canceled or rejected by IMS. The business event is updated on the Obligation Warehouse Web and all output, signifying that the obligation was permanently dropped, canceled, or rejected in IMS. After the business event of obligation is updated, it is available for any of the automated processes in the Obligation Warehouse system, except for AutoDO.

An obligation can only be sent to DTC Delivery using the AutoDO (DCAT) process in the Obligation Warehouse system one time. If the obligation is sent to IMS later permanently dropped, canceled, or rejected in IMS, it is ineligible for AutoDO again.

9.7 Pair Offs

The Obligation Warehouse Pair off process occurs daily to enable you to close open obligations in the same CUSIP, where the positions of the buyer and seller offset, as a Pair Off. Within the this section you learn about:

- Benefits of the pair off process
- Requirements for pair off
- When the pair off process takes place
- Exclusions preventing an obligation from pair off
- Rules for pair off
- Methodology of the pair off process

This section also includes scenarios demonstrating how the pair off process works under a variety of conditions, including:

- Off-setting obligation matches when criteria match exactly for quantity, settlement date, and final money (Perfect)
- Obligation matches when the underlying security is classified as a municipal
- One-to-many obligation pair offs
- When pair off remainder balances are used in subsequent (future) pair offs.

9.7.1 Benefits of Pair Off Process

The Pair Off process can result in:

- Fewer obligations to warehouse, maintain, and possibly settle
- Reduced costs

9.7.2 Pair Off Requirements

The pair off process takes place at the obligation level and requires the bilateral agreement of both parties for a pair off to be considered. Both parties must set the Pair Off Indicator to YES on every obligation to be included in the pair off. The obligation must be in an OPEN status in the same CUSIP, where both the buyer and seller are the same parties but on opposite sides. The settlement date can be in the past or current.

9.7.3 Pair Off Time of Execution

The pair off process takes place daily–with the exception of the processing date of the Reconfirmation and Pricing Service (RECAPS)–running immediately after the completion of the CNS eligibility check (at approximately 17:15 ET). At the conclusion of the pair off process an MQ Administrative message is generated and distributed as an MT599.

9.7.4 Pair Off Exclusions

If any of the following exists, the obligation is excluded from the pair off process:

- Not in an OPEN status
- Obligation source is ACAT/DCAT
- Last business event of SIMS
- Undergoing a corporate action
- Underlying security of a mutual fund, syndicate, or when-issued

9.7.5 Pair Off Rules

If any of the following exists, obligations do not result in pair off:

- Pair off indicator is set to NO
- Pair off results in a negative quantity of the main obligation
- Net of the two obligations being paired off results in a non-standard settlement (Non-standard settlement means either the quantity or final money amount are negative even though the other field is positive)
- Pair off results in no change to the final money amount of the main obligation
- One of the obligations in the pair off has a quantity with zero final money amount

If a pair off is possible, the main obligation is decremented by the matching quantity and the relative proportionate final money amount versus the closed obligation. If the final money amounts for each obligation do not net, a cash adjustment is generated and appears in the cumulative DTC Settlement Obligation Warehouse Pair off Total Code 22 figure for the following business day.

The Obligation Warehouse Pair Off Activity is available as a machine-readable output (MRO) file through AutoRoute and as a report in the Obligation Warehouse Web Report Center.

When an obligation is closed due to a pair off, the business event becomes:

- POFF (if the entire obligation closed in one pair off); or
- POFP (if the obligation only partially closes).

9.7.6 Pair Off Methodology

The Obligation Warehouse first identifies any obligation in an OPEN status with its pair off eligibility flagged as YES by both buyer and seller, regardless of forward or past settlement dates where the contra-sides and CUSIP are the same and the obligations are offsetting, resulting in a fewer number of transactions outstanding. Obligation Warehouse begins the Pair Off process by reviewing obligations from the Receiver's perspective. The hierarchy of review for pair off is as follows:

1. Find a perfect off-setting obligation.
2. Look for obligations where a one-to-many pair off results in no cash difference.
3. Begin a one-to-many evaluation where one main obligation is decremented by the off-setting obligation being closed. The resulting money is calculated and any cash adjustment sent to DTC for settlement.
4. Repeat 1-3 from the Deliverer's perspective.

Note

Municipal securities (Sub-issue Type List 310) are included in the Pair Off process if they satisfy the requirements of steps 1 or 2.

9.7.7 Pair Off Scenarios

The following scenarios show how the pair off process works.

9.7.7.1 Pair Off Scenario When Criteria Match Exactly for Quantity, Settlement Date and Final Money (Perfect)

In a perfect off-setting obligation match where the criteria match exactly for quantity, settlement date, final money, the net result of combining the two obligations is no cash movement.

Receiver Member	Deliverer Member	CUSIP	Quantity	Final $ Amount	Settlement Date	OW Control Number	Comment
1001	2001	459200101	20	4100.00	5/31/2013	W20132030001	1:1 match
2001	1001	459200101	20	4100.00	5/31/2013	W20132030002	1:1 match

9.7.7.2 Pair Off Scenario When Obligation Underlying Security is Classified as a Municipal

The first obligations that are paired off are as a one-for-one OR one-for-multiple number of obligations where the total quantity results in a complete cleanup.

Note:

Some cash difference can result, as shown in the following table:

Receiver Member	Deliverer Member	CUSIP	Quantity	Final $ Amount	Settlement Date	OW Control Number	Comment
1003	2002	160131CT3	10,000	12,000	5/31/2013	W20132030003	1:1 match
2002	1003	160131CT3	10,000	12,000	5/31/2013	W20132030004	1:1 match
1003	2002	160131CT3	45,000	540,000	6/3/2013	W20132030005	1:many
2002	1003	160131CT3	15,000	180,750	5/31/2013	W20131230006	many:1
2002	1003	160131CT3	20,000	240,000	6/4/2013	W20132040007	many:1
2002	1003	160131CT3	10,000	120,500	6/5/2013	W20132050008	many:1
		Cash Diff	0	$ 1,250			

For the purposes of Obligation Warehouse pair offs, the sub-issue types 310-315, found on the DTCC security master file is classified as a municipal. See Sub-Issue Type List.

9.7.7.3 One-to-Many Pair Off Scenario

In this scenario, each obligation, including the main obligation, is assigned the pair off control number that identifies the grouping and denotes the sequence. Additionally, on the daily Pair Off Activity MRO file or the Pair Off report available through the Obligation Warehouse Web Report Center, the pair off groups are mapped to the pair off control number to show the individual sequences and the final cash adjustment balance. The partial pair off process begins by evaluating the oldest settlement dates first, and then the smallest quantities. Separately assess each obligation against the rules for pair off.

Receiver Member	Deliverer Member	CUSIP	Quantity	Final $ Amount	Settlement Date	OW Control Number	Comment
1004	2003	38526T101	14,510	2,321.60	5/15/2013	W20132030009	Main
2003	1004	38526T101	2,300	322.00	5/1/2013	W20131960010	Pair Off
2003	1004	38526T101	1,000	130.00	5/7/2013	W20131970011	Pair Off
2003	1004	38526T101	3,500	490.00	5/23/2013	W20131980012	Pair Off
2003	1004	38526T101	6,200	1,054.00	5/30/2013	W20132010013	Pair Off

Step 1:

OW Control Number	Quantity	Final $ Amount	Implied Price/Share	Credit to Member	Debit to Member	Comment/Cash Adj. Amount
W20132030009	14,510	2,321.60	.1600			Original amount
	2,300	368.00				Amt. of decrement
W20131960010	2,300	322.00	.1400			Closed
				2003	1004	$ 46.00

Step 2:

OW Control Number	Quantity	Final $ Amount	Implied Price/Share	Credit to Member	Debit to Member	Comment/Cash Adj. Amount
W20132030009	12,210	1,953.60	.1600			Balance amount
	1,000	160.00				Amt. of decrement
W20131960011	1,000	130.00	.1300			Closed
				2003	1004	$ 30.00

Step 3:

OW Control Number	Quantity	Final $ Amount	Implied Price/Share	Credit to Member	Debit to Member	Comment/Cash Adj. Amount
W20132030009	11,210	1,793.60	.1600			Balance amount
	3,500	560.00				Amt. of decrement
W20131960012	3,500	490.00	.1400			Closed
				2003	1004	$ 70.00

Step 4:

OW Control Number	Quantity	Final $ Amount	Implied Price	Credit to Member	Debit to Member	Cash Adj. Amount
W20132030009	7,710	1,233.60	.1600			Balance amount
	6,200	992.00				Amt. of decrement
W20131960013	6,200	1,054.00	.1700			Closed
				1004	2003	$ 62.00

The delivering party of shares has a higher price point so the deliverer receives a credit.

The main obligation has a remaining balance of Quantity 1,510 shares with Final Money Amount of $241.60.

The Obligation Warehouse Pair Off Activity file is available as AutoRoute product ID (02051967 for production, and 02981967 for test). Contact your Connectivity, Activation and Production Support (CAPS) to be set up for this file.

9.7.7.4 Pair Off Scenario When Remainder Balances are Used in Subsequent (Future) Pair Offs

The one-to-many example, see One to Many Pair Off Scenario, creates a final remainder balance that can be used in another pair off. If this occurs, the obligation is associated with more than one Obligation Warehouse pair off control number.

Receiver Member	Deliverer Member	CUSIP	Quantity	Final $ Amount	Settlement Date	OW Control Number	Comment
1005	2006	449172204	2,236	2,289.44	6/1/2013	W20132040011	1:many
2006	1005	449172204	230	235.50	6/6/2013	W20131990012	1:many
2006	1005	449172204	3,000	3,150.00	6/4/2013	W20131890013	1:many
1005	2006	449172204	994	1,033.76	6/12/2013	W20132130014	1:1

Step 1–Day 1

OW Control Number	Quantity	Final $ Amount	Implied Price	Credit to Member	Debit to Member	Cash Adj. Amount
W20132040011	2236	2,289.44	1.0239			Original amount
	230	235.50				Amt. of decrement
W20131990012	230	235.50	1.0239			Closed
						No cash adjustment

Step2–Day 2

OW Control Number	Quantity	Final $ Amount	Implied Price	Credit to Member	Debit to Member	Cash Adj. Amount
W20131890013	3,000	3,150.00	1.05			Original amount
	2,006	2,106.30				Amt. of decrement
W20132040011	2,006	2,053.94	1.0239			Balance amount
				2006	1005	$ 52.36

Step 3–Day 2

OW Control Number	Quantity	Final $ Amount	Implied Price	Credit to Member	Debit to Member	Cash Adj. Amount
W20131890013	994	1,043.70	1.05			Balance amount
W20132130014	994	1,033.76	1.04			Closed
				2006	1005	$ 9.94

9.7.7.5 Using the Obligation Warehouse Pair Off Indicator

The member controls the eligibility of an obligation for the pair off process by using the Pair Off Indicator in several ways.

- If it is occasionally advantageous to bilaterally pair off a group of obligations, the member should identify each obligation and set the Pair Off Indicator to YES.
- If the member prefers to always try to pair off obligations bilaterally to create efficiencies, set the Account Level Pair Off Indicator to YES.
- If the member prefers to select individual obligations to exclude from the pair off process by using an Account Level Pair Off function, set the Pair Off Indicator to NO.

9.7.7.6 Managing the Pair Off Indicator at the Obligation Level

The Obligation Warehouse Pair Off Indicator is set with a default of NO, which excludes an obligation from being considered for the pair off process. To include an obligation(s) for the pair off process, the Pair Off Indicator must be set to YES.

The Pair Off Indicator on individual obligations can be set, regardless of whether the Account level selection is activated.

Obligation Warehouse uses NO as the default value for the Pair Off Indicator. Users may change the Pair Off Indicator to YES to automatically mark all obligations to be included in the pair off process using the Obligation Warehouse Web Administrative page for Account Level Pair Offs. Members may elect to have the Pair Off Indicator default to either YES or NO for all obligations submitted starting on an effective date in the future.

9.7.7.7 Managing by Using the Account Level Pair Off Indicator

Keep the following guidelines in mind when using the Pair Off indicator:

- Once daily, Obligation Warehouse applies the new updates for Account Level pair offs at 10:00 (A.M.) Eastern Time.
  - When the Account Level pair off selection of YES has been input for an effective date. Obligation Warehouse applies the yes value to all obligations in the OPEN status at 10:00 (A.M.) Eastern Time on the effective date requested. For all obligations in the Obligation Warehouse system in statuses other than OPEN, such as OPPA, PCPA, PCAN, and RCPA. It is the responsibility of the members to change the Pair Off Indicator on the individual obligation.
- All new entries to Obligation Warehouse, after the effective time and date, have the default value of YES for the Pair Off Indicator.
- If a specific obligation needs to be marked as PAIR OFF = NO; you can change the pair off indicator on individual obligations.
  - When the member elects to change the account level Pair Off Indicator to NO for all their obligations, the new no value is applied at 10:00 (A.M.) Eastern Time on the effective date to the obligations in the following statuses: OPEN, OPPA, PCAN, PCPA, and RCPA.

    This conservative approach protects members from obligations being DK'ed and then included in a pair off creating an unexpected cash adjustment.
  - All new instruction submitted by the member have the Account Level Pair Off indicator value applied. After receipt of the initial instruction, the member can then change the Pair Off indicator to another value by modifying either on Obligation Warehouse Web or through the MQ message.
- Starting on the effective date after the 10:00 (A.M.) Eastern Time update, all new obligation accepted into Obligation Warehouse from the automated loads sources of ACATS/ECATS/FCATS; CNS Exits, and NSCC Balance Orders have the Account Level Pair Off indicator reflecting the value requested.

Note

You can set the Pair Off indicator on an ACATS, ECATS, or FCATS to YES, but the obligation is ineligible for the Pair Off process because of its source.

- Obligation Warehouse has several automated maintenance functions that can close an obligation and open a new obligation. Keep in mind the following guidelines for each process:

- REORG (Corporate Actions)
  - When Obligation Warehouse applies a mandatory REORG event that closes the old obligation, makes a transformation calculation and opens a new obligation, the default value for the Pair Off indicator is NO, regardless of what the original obligation pair indicator value (YES or NO).
  - Members are responsible for changing all Pair Off indicators on any obligation opened in the Obligation Warehouse system by the automated REORG process. The Account Level Pair Off indicator is not used.
- RECAPS
  - If an obligation is trade for trade; is closed and a new obligation is opened due to RECAPS, the Pair Off Indicators are retained on the obligation.
  - If an obligation is closed and either bilaterally or multilaterally netted during the RECAPS process; the new open obligation defaults to NO for the Pair Off indicator.
- Participant Swings

Obligations closed and opened in the Obligation Warehouse system due to a participant swing retain the original Pair Off indicator value.

10. OBLIGATION WAREHOUSE PRODUCTION SUPPORT CONTACTS

Normal business hours are 8:00 A.M. to 5:30 P.M. Eastern Time. For off hours or weekend assistance call the DTCC Client Support at 1-888-382-2721 option 5, 4.

Scenario	Area of Responsibility	Phone Number
General Obligation Warehouse information	Business Operations	888-382-2721 option 5, 4
MQ Connections	Connectivity Activation and Production Support (CAPS)	888-382-2721 option 5, 2
MQ subscription not found	Connectivity Activation and Production Support (CAPS)	888-382-2721 option 5, 2
Obligation Warehouse Web Registration and passwords	Connectivity Activation and Production Support (CAPS)	888-382-2721 option 5, 4
AutoRoute Files transmission not received	Connectivity Activation and Production Support (CAPS)	888-382-2721 option 5, 4
New AutoRoute file request	Connectivity Activation and Production Support (CAPS)	888-382-2721 option 5, 4

11. USER TESTING

The Obligation Warehouse PSE test system is open and available to members during normal business hours. Every week the Obligation Warehouse PSE test system is purged; it is then loaded with a copy of the close of business Friday's data. Auto loads of NSCC Balance Orders and ACATS are added once during the Friday night load cycle. Throughout the week, CNS eligibility checks are run daily at 17:00 (5 P.M) Eastern Time and Mandatory Reorgs. are applied twice daily at the start of day, 21:00 (9 P.M) and 14:00 (2 P.M) Eastern Time.

Members are free to run their own test scripts or partner with another member to run a specific test. For assistance with specific features of Obligation Warehouse, contact UATTesting@dtcc.com.

11.1 Obligation Warehouse Web

Access to the Obligation Warehouse PSE test system is available to full service NSCC members only. Contact the Access Coordinator at your firm. If the Obligation Warehouse product does not appear on the menu in CRS, send an email to WebRSG@dtcc.com to add the Obligation Warehouse product. Typically, it takes one business day to add the Obligation Warehouse product to a member's profile.

11.2 MQ Messaging

MQ messaging to and from the Obligation Warehouse PSE test environment is available during normal business hours. MQ messaging subscriptions must be active in the Obligation Warehouse test system for both inbound and outbound messaging.

12. CNS ELIGIBILITY FOR OPERATIONS PERSONNEL

The CNS eligibility check in the Obligation Warehouse system occurs once daily at 17:00 (5 P.M) Eastern Time. Only obligations in an OPEN status on settlement date less one day or older are considered for the CNS eligibility check. Securities are reviewed for CNS eligibility. If the security is eligible the obligation is closed in the Obligation Warehouse system and sent to CNS.

12.1 Managing What is Sent to CNS

Any compared/matched obligation that is in the status OPEN could be eligible for CNS if it meets the following conditions:

- X-CNS indicator for both buyer and seller are equal to no.
- CUSIP is CNS eligible (among others, the CUSIP is not undergoing either a voluntary or mandatory reorganization or it does not have a DTC DO Chill. For more information about CNS, see the Equities Clearing – CNS section of the DTCC Learning Center.)

  The CUSIP is not a when issued (WI) security.
- Obligation Warehouse Business Event is not SIMS.
- Price available on the DTC Central Pricing database has been updated in the last five business days.

Any obligation in the Obligation Warehouse system that is in the status of OPEN, OPPA, PCAN, and PCPA should be monitored daily to manage what is considered for the CNS eligibility check. If a compared obligation is pending another action, the possibility exists that another action or actions could occur prior to the daily CNS eligibility check putting the obligation in an OPEN status. The following table shows a sequence of how the obligation could close and move to CNS, when earlier in the day it was in a pending status:

Original Status	Action Taken	Resulting Status
OPPA Open Pending Bilateral Acceptance of the delivery notification.	• DK Delivery by the contra. • Cancel Delivery by initiator of delivery notification.	OPEN If CNS eligible, the obligation is closed and sent to CNS at 17:00 (5 P.M.) Eastern Time.
PCAN Pending Cancel requires bilateral acceptance.	• DK Cancel by the contra. • Un-Cancel by initiator of cancel request.	OPEN If CNS eligible, the obligation is closed and sent to CNS at 17:00 (5 P.M.) Eastern Time.

Original Status	Action Taken	Resulting Status
PCPA Pending Cancel Pending Acceptance of the delivery notification is a composite status requiring two steps to clear.	1. DK Delivery by the contra. 2. DK Cancel by the contra.	OPEN If CNS eligible, the obligation is closed and sent to CNS at 17:00 (5 P.M.) Eastern Time.
	1. Cancel Delivery by initiator of delivery notification. 2. Un-Cancel by initiator of cancel request.	
PCPA Pending Cancel Pending Acceptance of the Delivery Notification is a composite status requiring two steps to clear.	1. Accept Delivery by the contra. 2. DK Cancel by the contra.	OPEN If CNS eligible, the obligation is closed and sent to CNS at 17:00 (5 P.M.) Eastern Time.
	1. DK Delivery by the contra. 2. Un-Cancel by initiator of cancel request.	

12.2 Precautions for CNS Eligibility Check

Keep in mind the following precautions for CNS eligibility checks:

- All obligations in a status OPEN should be reconciled to the member's internal books for OPEN obligations daily.
- Use the exclude from CNS indicator (X-CNS = yes) to control obligations that should not be closed and sent to CNS if special circumstances require.
- Deliverer and receiver each have control of the X-CNS indicator independently.

12.3 Settlement—Balancing for Closed Sent to CNS

All obligations closed and sent to CNS because of the Obligation Warehouse CNS eligibility check are marked in the Obligation Warehouse system as status Closed, business event SCNS (Sent to CNS). Closed obligations are shown on the Obligation Warehouse Web Report Center, EOD Closed report on the date of closure. Upon implementation, you can download and access the report using Microsoft Excel.

The obligations that are closed and sent to CNS appear on the CNS Miscellaneous Activity file (AutoRoute Product ID 02042008 for MRO and 020400001 for Print Image) and carry the OW Control Number to link back to the obligation just closed in the Obligation Warehouse system.

The Obligation Warehouse obligations that are closed and sent to CNS are found on the NSCC Money Settlement statement on line code 15 with the CNS Miscellaneous Activity. Obligations closed in the Obligation Warehouse system and sent to CNS are included in the NSCC Guarantee the night after the settlement has completed.

12.4 Follow-Up for an Obligation Closed –Sent to CNS in Error

In the event an obligation is automatically closed in the Obligation Warehouse system and sent to CNS when that was not the intention of the counterparties; the procedure below should be used. The process of removing the obligation from CNS is known as Requesting a reversal from CNS.

12.4.1 Requesting Reversals of Closed Obligations Set to Settle CNS

Obligations with "OPEN" status on securities that are eligible for CNS are subject to being automatically closed "CLSD" with positions becoming part of participant's CNS net settlement. This Eligibility Check process takes place on Settlement Date -1. Should a participant wish to subsequently reverse a position that has become part of their CNS net (also known as a "CNS Flip"), participants must complete the following process:

1. The requesting participant should contact the original contra-side of their closed obligation. Both parties must agree that the position should be reversed out of their CNS net position before proceeding.
2. Both participants must notify the NSCC Support department by email at NSCCSupport@dtcc.com or contact DTCC Client Support by telephone at 1-888-382-2721, and then follow the prompt for product support.
3. The request must include the following information:
    a. CUSIP
    b. State that you wish to reverse a "CNS Flip" from the Obligation Warehouse
    c. Include OW Control Number or XREF ID#
    d. Number of shares of your original Obligation (Note: The share quantity must match exactly the quantity provided in the email submitted by your contra party–partial reversals are not permitted).
    e. Identify the contra side's participant number that sends a matching request to DTCC.
4. After both requests have been properly submitted, NSCC Support processes the reversal. The reversal appears as a Code 15 adjustment on your CNS Night Miscellaneous Report the following day. You can also verify the reversal using the CNS Accounting Summary Report.

12.5 Research for Obligations Closed—Sent to CNS

To identify the obligations closed because they were sent to CNS:

1. Log on to the Obligation Warehouse Web.
   For more information, see the Obligation Warehouse Web.
2. Using the Quick link on the right-hand side of the Home page, click **Obligation Search Engine**.
3. Narrow your search by populating the settlement date with the required date or range. Select the Closed sent to CNS status on the lower portion of the page, under inactive statuses.
   The results returned with the first 20 lines populated.
4. Click the green Excel icon on the top right section of the banner.
5. Save the spreadsheets of closed obligations for the dates that you have selected.
6. You can now sort and review the information in an order similar to the member's internal records.

13. RECAPS FOR OPERATIONS PERSONNEL

The Reconfirmation and Pricing Service (RECAPS) was created in the mid-1980's in response to many failed settlements that where stale. FINRA Rule 11190 (a) requires using RECAPS through Obligation Warehouse as fail management tool for all members of NSCC and to provide an opportunity for periodic mark to market of the failed obligations. The mark to market aspect of RECAPS allows for balance sheet relief to members by providing the current market value of the failed obligations. Additionally, where multilateral netting is possible the obligations are netted to reduce the number of outstanding failed obligations.

Obligation Warehouse enables:

- Comparing ex-clearing transactions that are not otherwise submitted through NSCC trade capture services.
- Tracking, storage, and maintenance of unsettled obligations either compared through the service or forwarded to it from other NSCC services in accordance with the Rules (including securities exited from NSCC's CNS® system, as well as for Non-CNS Automated Customer Account Transfer Service ("ACATS") items, [1] NSCC Balance Order transactions [2] and Special Trades) (collectively Obligation Warehouse Obligations).
- Periodic repricing and netting of fail obligations. The tracking, storage, and maintenance feature of the Obligation Warehouse provides transparency and make information available to its users, serving as a central depository of open (failed or unsettled) broker-to-broker obligations, and allow users to manage and resolve exceptions (don't know or DK obligations) in an efficient and timely manner.
- Ongoing maintenance and servicing of open Obligation Warehouse obligations, such as adjustments for corporate actions, and a regular scan of Obligation Warehouse obligations for CNS eligibility.

Obligation Warehouse provides a trade matching and confirmation process where members may submit ex-clearing obligations that are not submitted to NSCC, through its other trade comparison or recording services. [3] Comparison of transactions submitted through the Obligation Warehouse occurs in real-time. Obligations are tracked and maintained within the Obligation Warehouse and made available for RECAPS processing [4] (as described below) until settled or canceled. In addition, transactions exited from CNS, non-CNS-eligible ACATS items, as well as NSCC Balance Orders and Special Trades are forwarded to the Obligation Warehouse for storage and maintenance, and RECAPS processing. Compared items stored in the Obligation Warehouse (whether compared by the Obligation Warehouse or forwarded to it from other NSCC services or systems) are referred to as Obligation Warehouse obligations. NSCC can automatically adjust any Obligation Warehouse obligations for certain mandatory reorganization events, which are initially limited to forward splits, name changes, redemptions, mergers (both cash and stock), and full calls with respect to bonds.

---

[1] Only non-CNS eligible ACATS and CNS-eligible ACATS that have been designated as ex-CNS are forwarded to the Obligation Warehouse. Non-CNS ACATS that receive and deliver instructions for mutual funds, limited partnerships, and safekeeping items are ineligible for Obligation Warehouse.

[2] Balance orders are forwarded to the Obligation Warehouse after netting and allotting has occurred in accordance with NSCC procedures.

[3] See Procedure II (Trade Comparison and Recording Service), which sets forth the procedures for comparison of direct submissions by members and trade recording of locked in transactions. Members should note that in accordance with Municipal Securities Rulemaking Board (MSRB) rules, NSCC reports transactions in municipal securities compared through its real-time trade matching service (RTTM) to the MSRB on behalf of members; however, transactions submitted through the Obligation Warehouse are not reported to the MSRB. To remain compliant with MSRB reporting requirements, submissions subject to MSRB rules should continue to be made through RTTM.

[4] Such items are subject to the validation criteria of the systems or services that forwarded them to the Obligation Warehouse; therefore, the matching and validation criteria set forth in footnote 9 does not apply.

Daily, the Obligation Warehouse service forwards to CNS Obligation Warehouse obligations in CNS-eligible securities. However, the Obligation Warehouse is not a guaranteed service, and an obligation forwarded to CNS is only guaranteed to the extent that the member meets its settlement obligation on the date the item is originally scheduled to settle in CNS. Transactions eligible for submission must have a valid CUSIP or ISIN and be denominated in U.S. Dollars. Initially, government, mortgage-backed, and foreign securities are all ineligible. Further, cash trades are not processed by Obligation Warehouse.

13.1 Obligation Warehouse Comparison and Trade Resolution Procedures

After a party enters the required transaction information[1], the contra party receives a Comparison Advisory, to which they must respond by submitting identical transaction details to facilitate a compared obligation, or by submitting a DK.[2],[3] If a member does not act on a Comparison Advisory submitted against it by the close of business on the fifth day after submission, NSCC may impose a fee upon the Member. If the deliverer and receiver submit trade data that matches, the trade is deemed compared if it meets money tolerances.[4] The uncompared trade details can be modified or canceled by the submitter on the submission date using the appropriate instruction.[5],[6] Upon comparison, NSCC may permit obligations to be canceled if both receiver and deliverer agree by submitting a cancel request bilaterally, or if one party affirms the other party's cancel request. Each Obligation Warehouse Obligation receives an OW Control Number to facilitate tracking the obligation through its settlement, cancellation or closure.

NSCC has no responsibility for determining whether any trade submission is a duplicate of an earlier trade submission and any such input is treated as a separate submission. From time-to-time, NSCC may delete trade input that is not matched by such time frames as it determines.

Obligation Warehouse obligations, for which deliveries are made through The Depository Trust Company (DTC) through either The New York Window (NYW), Envelope Settlement System (ESS), or electronic book-entry deliver order, are updated to indicate that they have settled in accordance with proper instructions from DTC or the member, respectively, which include the Obligation Warehouse control number. To give effect to such an update, members must provide DTC with instructions in accordance with DTC's procedures and include the Obligation Warehouse control number. In the event of a partial delivery through DTC, NSCC updates the records for the respective Obligation Warehouse obligation accordingly, based on information received either from DTC or the member's update to their own Obligation Warehouse Obligation records. Other items are recorded as settled upon the submission of appropriate instructions by the counterparties.

Obligations that have been reflected in the Obligation Warehouse as settled can be reopened, either partially or fully, because of a delivery reclaim message sent by either party to the obligation to the

---

1 Data required for a valid submission includes security identification, quantity to which party is deliverer or receiver, contra-broker, deliverer's final money, settlement date, market participation identification (MPID), if applicable, member's unique reference number (Xref), whether a transaction should be excluded from CNS processing and other identifying details as NSCC may require or permit.

2 Obligations can be submitted to the Obligation Warehouse in real-time. Required matching criteria includes the specific criteria listed in footnote 5, except for the cross-reference ID, and other identifying details as NSCC requires or permits.

3 Any submission of a DK must include the applicable reason code pertaining to the member's disagreement with the transaction.

4 Initially, if the deliverer and receiver submit trade data that matches in all required respects, the trade is deemed compared if it meets a money tolerance of $5 per million. Though this amount is subject to change as NSCC determines from time-to-time.

5 Modification of transaction details results in canceling the existing entry and opening a new submission.

6 Note: Transaction details that have been DK'ed by a contra party are deleted from processing in accordance with time frames specified by the corporation from time-to-time. Initially, such transaction details are deleted on the fifth business day following submission of the DK by the contra party.

Obligation Warehouse service. Updates to reflect reclaims of settled transactions are made after one party enters details of the original transaction[1], and the original transaction's Obligation Warehouse control number. After these details are submitted, an advisory of the reclaim is sent to the contra party, who must either submit identical transaction details to facilitate the reclaim and reopen the obligation in the Obligation Warehouse system or submit notification that it does not accept the reclaim details entered by the initiating party. Updates for reclaims may only be submitted to the Obligation Warehouse service for a period of two business days following the actual settlement date of the relevant obligation. If the reclaim message is not accepted by the contra party, it is deleted from the Obligation Warehouse, and the parties needs to generate a new reclaim message in the Obligation Warehouse system. If the original obligation has been settled for longer than two business days, any reclaim message are rejected.

If NSCC ceases to act for a member, all open activity relating to that member are deleted from the Obligation Warehouse; however, the reports relating to these activities are maintained in accordance with NSCC's record retention requirements.

13.2 RECAPS Calendar Plan

NSCC has planned for the RECAPS process to continue occurring at least twice monthly. For the distribution of exact dates, see the NSCC important notice.

13.3 Managing What is Included in RECAPS

The RECAPS cycle occurs after the close of business as the last event in the end of day processing. Only obligations in the status: OPEN that failed for two or more days are eligible for RECAPS. Additionally, the following criteria must be met for the obligation to be included in the RECAPS:

- Obligation has not been marked to exclude from RECAPS by either party.
- CUSIP is not undergoing a mandatory or voluntary reorganization.
- Security is not a mutual fund.
- CUSIP is known to DTCC (Either DTC or NSCC).

Any failed obligation in the Obligation Warehouse system that is in the status of OPEN, OPPA, PCAN, and PCPA should be monitored daily to manage what is included in RECAPS. If a compared obligation is pending another action then the possibility exists that another action(s) could occur prior to RECAPS, changing the status of the obligation to OPEN. The following table shows a sequence of how the obligation could be included in RECAPS, when earlier in the day it was in a pending status:

[1] Transaction details required are identical to those required when comparing an obligation, set out in footnote 5.

Original Status	Action Taken	Resulting Status
OPPA Open Pending bilateral Acceptance of the delivery notification.	• DK Delivery by the contra. • Cancel Delivery by initiator of delivery notification.	OPEN If eligible, the obligation is closed and transformed in RECAPS at the end of day.
PCAN Pending Cancel requires bilateral acceptance.	• DK Cancel by the contra. • Un-Cancel by initiator of cancel request.	OPEN If eligible, the obligation is closed and transformed in RECAPS at the end of day.
PCPA Pending Cancel Pending Acceptance of the delivery notification is a composite status requiring two steps to clear.	• 1. DK Delivery by Contra • 2. DK Cancel by Contra	OPEN If eligible, the obligation is closed and transformed in RECAPS at the end of day.
	• 1. Cancel Delivery by initiator of delivery notification • 2. Un-Cancel by initiator of cancel request	
PCPA Pending Cancel Pending Acceptance of the delivery notification is a composite status requiring two steps to clear.	• 1. Accept Delivery by Contra • 2. DK Cancel by Contra	OPEN If eligible, the obligation is closed and transformed in RECAPS at the end of day.
	• 1. DK Delivery by Contra • 2. Un-Cancel by initiator of cancel request	

Criteria that allows the obligation to multilateral net include:

- Obligation is in a whole value, (not a fractional quantity or baby bond).
- CUSIP is found on the DTCC Security Master files.
- CUSIP is not a certificate of deposit.
- CUSIP is not globally locked.

13.4 Precautions Related to RECAPS

Consider the following guidelines:

- Daily reconcile all obligations in the OPEN status to the member's internal books for OPEN obligations.
- Use the exclude from RECAPS indicator (X-RECAPS = yes) to control obligations that should not be closed and transformed by RECAPS.
- Deliverer and receiver independently have control of the X-RECAPS indicator.
- Set the X-RECAPS indicator to Yes at any point in the life of the obligation. The member is required to change to no for consideration for the RECAPS process.
- Any obligation that is opened by RECAPS resulting from inclusion in the multilateral netting process has the attributes set to a default value. The cross-reference (Xref) number is blank, and the exclude for CNS, REORG, or RECAPS is equal to no.

13.5 Settlement–Balancing of RECAPS

The Settlement area of each member should verify that their open fail records match what is shown in the Obligation Warehouse system. In the event of a discrepancy, investigate and know why the difference exists.

13.5.1 Before the RECAPS Cycle

Any difference between the internal open fail file and the obligations in OPEN status in the Obligation Warehouse system should be reconciled. The obligations in the Obligation Warehouse system should match the status on the internal books and records. Where necessary, mark an obligation as exclude from RECAPS, until a discrepancy can be cleared.

On the Obligation Warehouse Web Obligation Search Engine query by the following criteria:

- Settlement date range from a prior date, typically the prior RECAPS date, to two days before the current RECAPS date
- X-RECAPS = no
- Status = OPEN

This is the universe of OPEN fails in the Obligation Warehouse system that could be included in RECAPS. Use for reconciling against the internal books for the open fails.

13.5.2 After the RECAPS Cycle

- Use Obligation Warehouse Web Report Center to open the report from the RECAPS date labeled Obligation Warehouse EOD RECAPS report. (Both the obligations Closed and Opened due to RECAPS are both on this file. You can download the file in either a CSV format or Excel.)
- Using the Obligation Warehouse EOD RECAPS report scroll to the bottom and identify the total Receives, and then identify the total Delivers.
- Net total Receives with total Delivers, to create the Net RECAPS Figure.

The following procedure is for calculating the Net RECAPS figure:

- Use Obligation Warehouse Web Report Center to open the reports from the RECAPS date.

- Open the Obligation Warehouse EOD RECAPS report which represents the obligations closed due to the RECAPS process.

Net total Receives with total Delivers amounts, to create the Net Closed Amount.

- Subtract your Net Closed Amount from the Net Open Amount to create the Net RECAPS Figure.

13.6 Follow-Up for an Obligation Included in RECAPS in Error

When an obligation is included in the RECAPS process in error, the member should contact the Contra of new open obligation created from RECAPS to cancel the new obligation and make any necessary cash adjustment.

The member must also contact the contra of the old obligation to rebook the original fail. It is suggested that you use the participant notes field to reference the original Obligation Warehouse control number and note the obligation as a rebook.

13.7 Research for Obligations in RECAPS

Use of the Obligation Warehouse Web Obligation Search Engine is expected to query for RECAPS data.

For an Advanced Search use any entry field and a status as criteria to return a list of obligations that meet that request.

To perform an obligation search:

1. Select Obligation Management, Obligation Search Engine from the Main Menu (or use the quick link on the right side of the home page). The following Obligation Search Engine page appears:

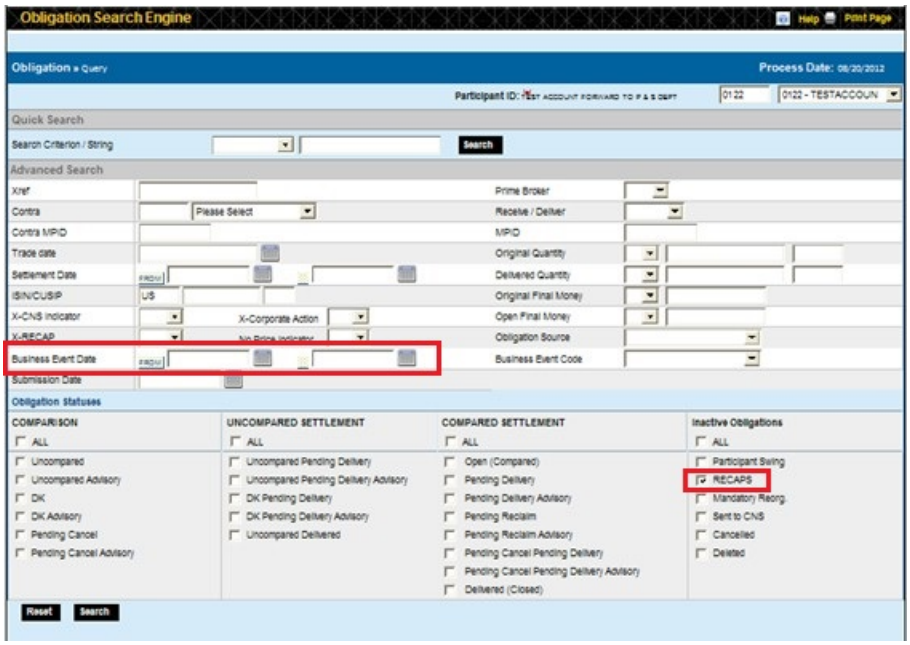

Figure 13.1 Obligation Search Engine for Closed due to RECAPS Results

2. Define the Business Event date of the RECAPS and select RECAPS.
3. Use the Advanced Search method to list all obligations that satisfy selected search criteria of a given status.
   a. Obligation Statuses are only mandatory criteria for multiple obligation searches.
      - You must select an Obligation Warehouse Status using one of two options.
      - Select a single obligation state and limit the search results to the obligations of the selected status and search criteria.
      - Retrieve the entire column of statuses of the obligations using the ALL check box. Note the columns are categorized: Uncompared, Uncompared Settlement, Compared Settlement, and Inactive Obligations.
   b. You can customize the search using a combination of the various obligation statuses and obligation criteria. You must select either a single Obligation Status or at the top of the column ALL (Settlement, and Inactive Obligations) to locate the obligations that were in the RECAPS process.
   c. The remaining search fields are optional and allow the search to be defined as narrowly or broadly as desired. Search using the obligation source RECAPS and the new settlement date to find obligations recently opened during the RECAPS cycle.

d. Several fields include operator drop down options (=, <=, >=) that allow you to search for either a fixed valued or a range. For example, a query may by defined to look for all transactions that have a Quantity of 100 (= 100) or a quantity of less than or equal to 100 (<= 100).
e. No wildcards are accepted as search criteria.
f. When all the search criteria have been selected, click Search, at the bottom left side of the page. If you need to reset the page to all blanks to begin again, click, Reset.

4. Based on the Obligation Search criteria in the Obligation Warehouse system the query results are displayed on the Obligation Search Results page. Although the layout of this page is consistent from one query to the next, the data and the amount of data vary according to the specific request. You can export the Obligation Search Results to Excel to capture all the data elements that display on the trade detail.

14. REORGS FOR OPERATIONS PERSONNEL

Obligation Warehouse transforms all obligations for the named CUSIP in a status OPEN with a settlement date of today or earlier when one of the following mandatory corporate action events occurs:

71	Stock Merger
72	Cash Merger
75	Corporate Bond Full Call
77	Municipal Bond Full Call
91	Name Change

Obligations are transformed for starting on allocation date and continuing for five business days. The exception is that obligations sourced from ACATS only concert on the allocation date.

Any cash difference created from the transformation is detailed in the Obligation Warehouse Reorg. Cash Adjustment file and the total amount is noted on the DTC Settlement Statement Line Code 21.

Obligation Warehouse also has an indicator to exclude an obligation from being included in one of the mandatory corporate action events named above with the new implementation. The indicator functions independently for receiver and deliverer. If either side has selected the X-REORG indicator, the obligation is not transformed.

14.1 REORG Transformation in Obligation Warehouse

If the obligation is in one of the uncompared statuses: (UNC, UNPA, DKPA, and DKUC), the submitting party should cancel the entry in the Obligation Warehouse system. If the obligation is in one of the compared statuses other than OPEN (such as OPPA, PCAN, PCPA and RCPA), it is the responsibility of the parties of the trade to cancel and rebook the submission.

On settlement date, only obligations in a status of OPEN, not specified as X-REORG are closed due to REORG. The new obligation is calculated using the pay rate defined by the corporate action. The money difference between the closed obligation and the new obligation transformed by the reorganization creates the cash adjustment reported on the Obligation Warehouse Reorg. Cash Adjustment file (AutoRoute Product ID 02051658.) All the cash adjustments for each of the five daily cycles are totaled and included in the DTC Settlement Statement on line code 21.

If an obligation is transformed due to REORG during cycle 5 at 16:45 (4:45 P.M.) Eastern Time, which is after DTC Settlement has closed, the cash adjustment is reflected in the next settlement day, DTC Settlement Line Code 21 total.

14.2 REORG Information Updates

Obligation Warehouse adjusts obligations in the OPEN status five times daily; at start of day (approximately 21:00 (9:00 P.M.), 10:30 (A.M.), 12:30 (P.M.), 14:30 (2:30 P.M.), and 16:45 (4:45 P.M.) Eastern Time. The following table shows the cycle details with all times in Eastern Time:

Mandatory Reorg. Cycle #	Time of Transformation, Obligation Warehouse Reorg. Cash Adj. file produced	When Cash Adj. appears on Line Code 21 of DTC Settlement
1	Obligation Warehouse Start of day 21:00 (9 P.M.)	Settlement/Allocation day
2	10:30 (A.M.)	Settlement/Allocation day
3	12:30 (P.M.)	Settlement/Allocation day
4	14:30 (2:30 P.M.)	Settlement/Allocation day
5	16:45 (4:45 P.M.)	Next business day after Settlement/Allocation day

14.3 Precautions for REORG in the Obligation Warehouse system

Keep in mind the following precautions for REORG in the Obligation Warehouse system:

- Settlement date on the obligation must be less than or equal to processing date in the Obligation Warehouse system to apply the mandatory reorganization.
- Prevent an obligation from being potentially closed due to a mandatory reorganization applied by Obligation Warehouse by marking the obligation with X-REORG = Yes.
- If the obligation is marked X-REORG = Yes, it is the responsibility of the counterparties involved to adjust the obligation in accordance with the reorganization event of that CUSIP.
- Obligations in compared statuses, such as OPPA, PCAN, PCPA or RCPA, have the potential of changing back to the OPEN status and the reorganization applied by Obligation Warehouse.
- If an obligation is uncompared during the mandatory reorganization event, the submitter should cancel the comparison request.
- Obligations undergoing reorganization are not included in either the CNS eligibility check or the RECAPS cycle.
- No Obligation Warehouse Reorg. Cash Adjustment are generated for event type ’91 Name Change.
- ACATS only has reorganization events applied on the obligation’s settlement date.

14.4 Settlement and REORGs—Reconciliation of REORG

The Obligation Warehouse Reorg. Cash Adjustment file is only produced when Obligation Warehouse applies one of the six mandatory corporate action events: Stock Merger, Cash Merger, Corporate Bond, or Municipal Bond Full Calls.

Settlement and transformation of one of the mandatory corporate action events, listed in the following table, requires the communication and coordination of the member's Settlement and Reorg. functions.

#	Reorg. Event	OW—applied on:	Cash Component applied on:
71	Stock Merger	Allocation date	Allocation date (Only one to one Round up or Round down)
72	Cash Merger	Allocation date	Allocation date
75	Corp Bond Full Call	Allocation date	Allocation date
77	Muni Bond Full Call	Allocation date	Allocation date
91	Name Change	Allocation date	N/A

All obligations in the status OPEN with the CUSIP identified by the Reorg. could possibly be closed by Obligation Warehouse if the X-REORG indicator = No. Reconcile the Obligation Warehouse obligations that have had mandatory corporate actions applied.

- Use Obligation Warehouse Web Report Center to open the relevant reports for the Reorg. on a particular settlement date labeled Obligation Warehouse EOD REORG report. (Effective with the new implementation, both the obligations Closed and Opened due to Reorg. are available in this file. The file is in CSV format available for download and accessible using Excel.)
- Using the Obligation Warehouse EOD REORG report scroll to the bottom and identify the total receives, and then identify the total delivers.
- Net total Receives with total Delivers, to create the Net Reorg. Figure. The Net Reorg. Figure also matches the total of the Obligation Warehouse Reorg. Cash Adjustment Reports.
- The Net Reorg. Figure matches the DTC Settlement Statement (Code 21) total. An exception is the case of a Reorg. occurring during Cycle 5, the total cash must be adjusted. (Add yesterday's cycle 5 cash adjustment to those from cycle 1-4 today.)

The procedure for calculating the Net Reorg Figure is:

- Use Obligation Warehouse Web Report Center to open the reports from the Reorg. date.
- Open the Obligation Warehouse EOD REORG report which represents the obligations closed due to the Reorg. process.

Net total Receives with total Delivers amounts to create the Net Closed Amount.

Subtract your Net Closed Amount from the Net Open Amount to create the Net Reorg. Figure

14.5 Follow-Up of Obligation Included in REORG in Error

When an out of balance condition arises in the Obligation Warehouse file, verify that no obligations were closed due to REORG by querying the Obligation Warehouse database using the Obligation Warehouse Web Obligation Search Engine.

14.6 Research for Obligations Transformed by REORG

Keep in mind the following items:

- Use the Advanced Search method to list all obligations that satisfy selected search criteria of a given status.
- Obligation statuses are only mandatory criteria for multiple obligation searches.
- Select an Obligation Warehouse status using one of two options.
    - Choose a single obligation state and limit the search results to the obligations of the selected status and search criteria.
    - Retrieve the entire column of statuses of the obligations using the ALL check box. Note the columns are categorized: Compared Settlement and Inactive Obligations.
- Customize the search using a combination of the various obligation statuses and obligation criteria. You must select either a single obligation status or ALL (Compared Settlement and Inactive Obligations).
- Remaining search fields are optional and allow the search to be defined as narrowly or broadly as desired.
- Search by OPEN status by activating only the OPEN check box, or limit the search to something more specific by defining the settlement dates of the obligations and adding Obligation Source of REORG.
- Search the closed due to REORG obligations by defining the Obligation Event date range.
- Several fields include operator drop down options (=, <=, >=) that allow you to search for either a fixed valued or a range. For example, a query may by defined to look for all transactions that have a Quantity of 100 (= 100) or a quantity of less than or equal to 100 (<= 100).
- No wildcards are accepted as search criteria.
- When all the search criteria have been selected, click Search, at the bottom left side of the page. If you need to reset the page to all blanks to begin again, click, Reset.
- Based on the Obligation Search criteria in the Obligation Warehouse system the query results are displayed on the Obligation Search Results page. Although the layout of this page is consistent from one query to the next, the data and the amount of data varies according to the specific request. You can export all obligation search results to Excel to obtain all obligation details for research.

15. OBLIGATION STATUS AND EVENT MAP

The following table shows a complete listing of all possible iterations, described from both the delivery or receiving side of the obligation for status and event mapping. The map is useful for a more technically focused individual.

PREVIOUS EVENT CODE	EVENT CODE	STATUS CODE	SUB EVENT CODE	ORDER SEQUENCE	OUTPUT PREV STATUS CODE	OUTPUT STATUS CODE	OUTPUT EVENT CODE
DKPA	ACPT	CLSD	DLVR	1	DKPA	CLSD	ACPT
DKPA	ACPT	DKUN	DLVR	1	DKPA	DKUN	ACPT
OPPA	ACPT	CLSD	NONE	1	OPPA	CLSD	ACPT

16. IMPLEMENTING OBLIGATION WAREHOUSE

#	Task Name	Actions
1	MQ Connectivity	All members who utilize MQ messaging require a SMART connection with DTCC. For firms with existing SMART connections, the definitions for the Obligation Warehouse must be defined using the REF and MQ pg1 provided by the Service Activation group.
2	MQ Readiness	Completion of ping tests for the Obligation Warehouse application for test and production using Admin message. Prerequisite: Completion of MQ connectivity
3	CRE Registration	All participants must use a CRE registration to access the Obligation Warehouse Web system. The super access coordinator must first add the product for the access coordinator or user certificates.
4	Request Files	Member should request both test and production files to facilitate reconciliation. Get access to the following AutoRoute files for Production and Participant testing from the Obligation Warehouse Technical Resources page: • Intraday and End of Day Position MRO (AutoRoute Product ID: Production **02050703**/ PSE Test 02980703) • Cash Adjustments for Mandatory Reorg. File (AutoRoute Product ID: Production **02051658**/PSE Test 02981658) • Obligation Warehouse Pair Off Activity MRO (AutoRoute Product ID: Production **02051967**/ PSE Test 02981967)
5	PSE Testing for MQ users	DTCC has scripted scenarios to run through the various message types expected both in and out of Obligation Warehouse. Completion of test scripts is required. Prerequisite: CRE registration and MQ readiness.
6	Report MQ Ready	Notify DTCC in an email that MQ testing of messages for Obligation Warehouse has been successful. Prerequisite: Run test scripts successfully
7	PSE Testing for Web users	All members are required to have access to the Obligation Warehouse Web front end. Use the SMART network to access the Obligation Warehouse Web. Completion of Web test scripts is essential. Prerequisite: CRE registration

#	Task Name	Actions
8	Report Obligation Warehouse Web Ready	Notify DTCC by email that your firm has successfully tested the Obligation Warehouse Web.
		Obligation Warehouse system is purged of data.

17. USING THE OBLIGATION WAREHOUSE WEB

The Obligation Warehouse Web service is available for participant use from 21:00 until 18:00 ET the following day. Each day the Obligation Warehouse Web service will be closed between the end of day and the start of day for processing. Additionally, some maintenance will occur over the weekends.

During operating hours, both MQ messaging and the Obligation Warehouse Web service are available to participants who will be able to submit entries, respond to advisories for comparison, delivery or reclaim notification, conduct web queries, and view reports. If a participant uses MQ messaging and Obligation Warehouse Web simultaneously, all – taken to the Obligation Warehouse system will be reflected in real-time through both methods.

Securities eligible for submission must have a valid CUSIP and be denominated in US Dollars

- Equity Securities, including ADRs
- Municipal Bonds
- Corporate Bonds
- Unit Investment Trusts (UIT)
- Certificates of Deposit (CD)
- Non-CNS items that are typically ex-clearing from NSCC

Securities that specifically are not eligible in the Obligation Warehouse are:

- Government securities
- Mortgage-backed securities
- Foreign securities
- Cash trades where trade date, settlement date and the Obligation Warehouse processing date are equal
- ACATS for mutual funds, limited partnerships, and safekeeping items will not be included in the Obligation Warehouse system.

Obligations can be submitted directly to Obligation Warehouse through interactive messaging or through the Obligation Warehouse Web screens. Once entered, the contra will receive an Advisory, they can respond by submitting like details to facilitate a matched obligation to Affirm, or they can DK (signifying Don't Know) the obligation entry.

Additionally, Obligation Warehouse will systemically extract the CNS exits, NSCC Balance Orders, NSCC ACATS Receive and Deliver Instructions, that are non-CNS, and add them into Obligation Warehouse as compared obligations.

- CNS exits will be accepted each evening as part of start of day processing.
- NSCC Balance Orders will be accepted in the Obligation Warehouse system after each CTS is produced (three times daily, typically 22:00, 1:00 and 13:00 ET)
- ACATS receive and deliver instructions will be added as part of the end of day processing.

Every matched obligation in the Obligation Warehouse system will be assigned an OW Control Number that can be used for search queries. Compared obligations can be canceled if both receiver and deliverer agree by submitting a cancel request bilaterally, or one party could affirm the other's cancel request.

Obligation Warehouse uses the best match concept for matching obligations with exact matching fields. The tolerance for matching Final Money is $5 per million using the sellers (deliverer's) original final money.

A CNS eligibility check will occur daily at 17:00 ET for any matched obligations with a settlement date of next day or older. If an item is eligible it will automatically be sent to CNS as miscellaneous activity and appear on the CNS Miscellaneous Activity report (NSCC Settlement Code 15). When the item is sent to

CNS the Obligation Warehouse obligation is closed and noted as “Sent to CNS”. The items processed through CNS will be part of the NSCC Guarantee after the Settlement has completed.

The RECAPS process now occurs multiple times monthly and only requires one day to complete. Obligations that are matched and have a settlement date of at least two days prior will be considered for the RECAPS process. RECAPS eligible obligations in the Obligation Warehouse on the day of RECAPS can be excluded from the RECAPS process by marking the item X-RECAPS.

Each RECAPS eligible obligation is closed re-priced if appropriate, netted and allotted, the settlement date updated to the next business date and opened as a new obligation. The RECAPS process re-prices if the security has a price that has been assigned in the last five days, otherwise only the settlement date will be updated. Any money adjustments as a result of RECAPS are sent to DTC Settlement Line Code 20.

Matched obligations automatically are adjusted for any Obligation Warehouse eligible Mandatory Reorg. events five times daily. The open obligation are closed, the security details changes made and a new obligation is opened. Any cash component of a Mandatory Reorg. is sent to Settlement on behalf of the participant as DTC Settlement Line Code 21.

Deliveries or Reclaims (whether partial or full) through DTC for obligations are communicated and reflected in the Obligation Warehouse Web system, if the OW ID/ OW Control Number is populated (for any Reason Code) in the Settlement system. “Made” deliveries in DTC Settlement, Envelope Settlement or through the New York Window that have the OW ID/ OW Control Number field on the Settlement layout automatically verify and update the obligation in the Obligation Warehouse system. In the event the OW ID/ OW Control Number does not match to the obligation information in the Obligation Warehouse system, a reject is generated and sent to both parties.

Deliveries or reclaims completed outside of DTC, (whether partial or full) require that both deliverer and receiver agree upon a Delivery/Reclaim Request to acknowledge that the settlement took place. If one party submits the Delivery Notification request to close due to a delivery, the obligation is put into a “Pending Acceptance” status, until the contra affirms the delivery or submits their closing entry.

17.1 Registering to Using the Obligation Warehouse Web

Participants must use the Customer Registration Service (CRS) to activate a user of the Obligation Warehouse Web system. Access Coordinators at each firm act as the gatekeeper to the Obligation Warehouse Web system. Each firm has two or more Access Coordinators (ACs) to control the administration, setup, and access to the DTCC systems.

17.1.1 Becoming an Access Coordinator for Your Firm

To become an access coordinator for your firm, go to https://www.dtcc.com/client-center/access-coordinators for a copy of the AC form. Super Access Coordinators have the ability to create both end users and AC roles for DTCC products that they administer at their firms.

Super access coordinators manage the permission and entitlements of end users within their firm. Super access coordinators can create access coordinators and end users online using the CRS dashboard. Verify with your firm's super access coordinator or access coordinator to obtain access to the Obligation Warehouse Web system.

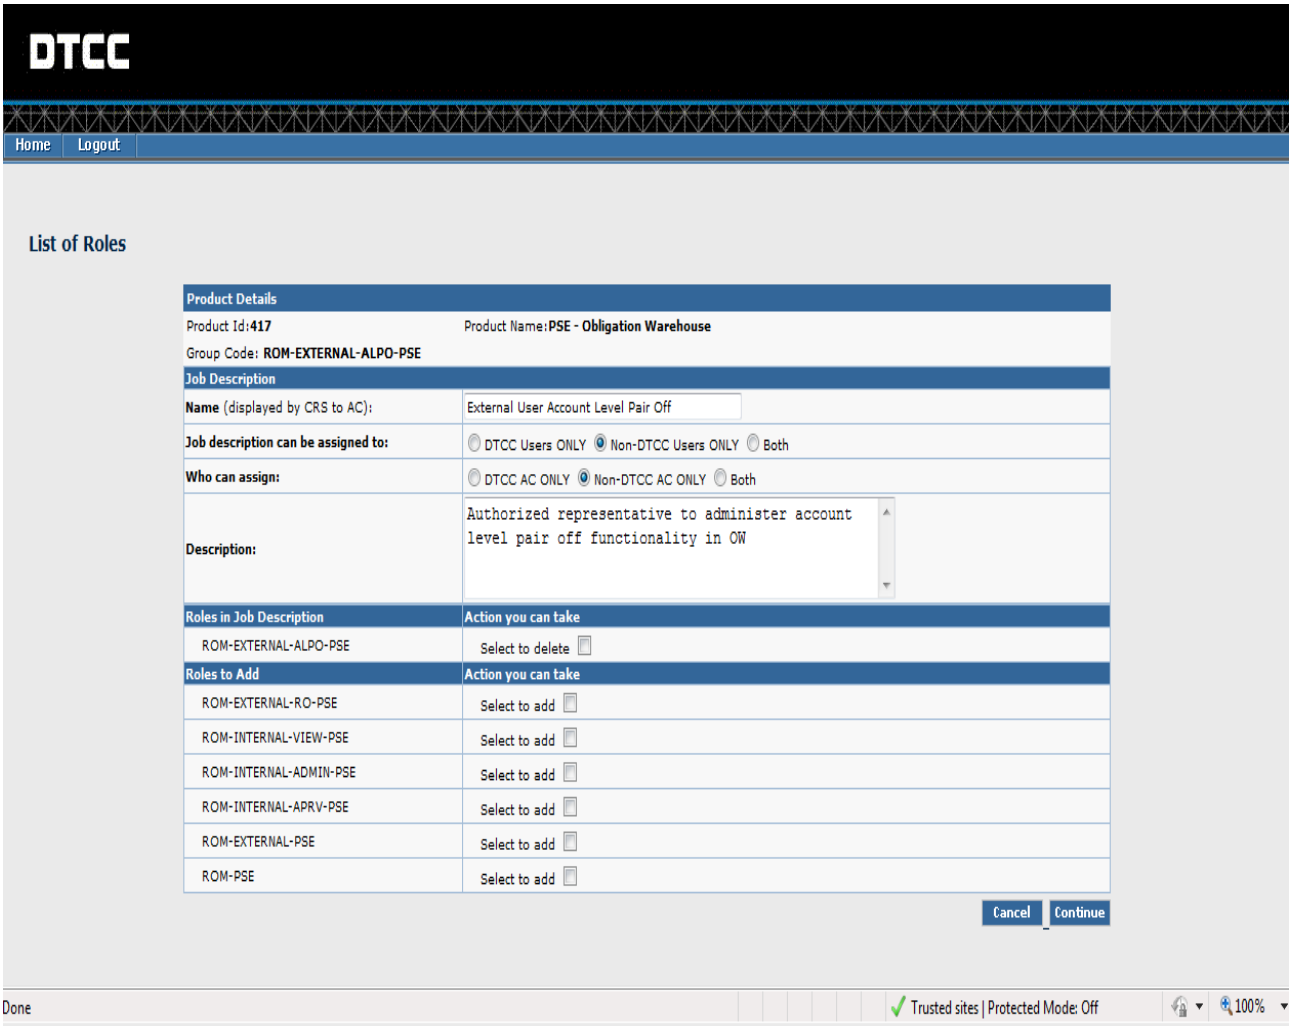

It is the responsibility of each participant to maintain access for only active employees of their firm and delete all inappropriate assignment of permissions to the Obligation Warehouse Web system. User permissions require re-verification at least every six months.

To add the Obligation Warehouse product to the CRS registration list of NSCC products, email WebRSG@dtcc.com.

After the Obligation Warehouse produt has been added to the available list of products used by your firm, the Access Coordinator can begin registering users.

17.1.2 Adding Roles to a User Profile

Only a Super Access Coordinators can change the entitlement that defines a user's role to request Account Level changes, such as Pair offs, on their profile.

17.1.3 Resetting a Password

Both Access Coordinators and Super Access Coordinators at each firm can reset passwords. On the Customer Registration Service menu bar, select User and then Reset Password. Type the User ID of the operator needing a password reset, enter it again to confirm, and then click Reset Password. After the prompt for reset password, click OK. The AC or Super AC will then supply the user with a temporary User ID and password.

Password Rules

The following password rules apply when creating a password for the Obligation Warehouse Web:

- Use 6-8 Characters (do not exceed 8)
- Must contain at least 4 letters and 2 numbers or symbols.
- Characters cannot be repeated.
- No spaces
- Password cannot be the same as your user name or ID.

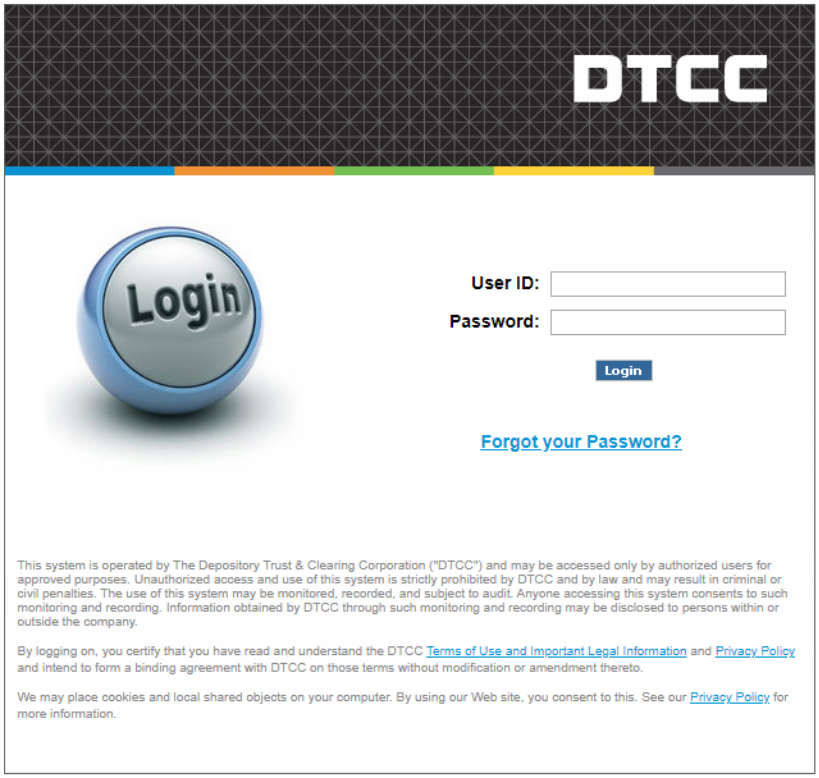

Figure 17.1.1 – DTCC Portal Access, Obligation Warehouse Web Sign on

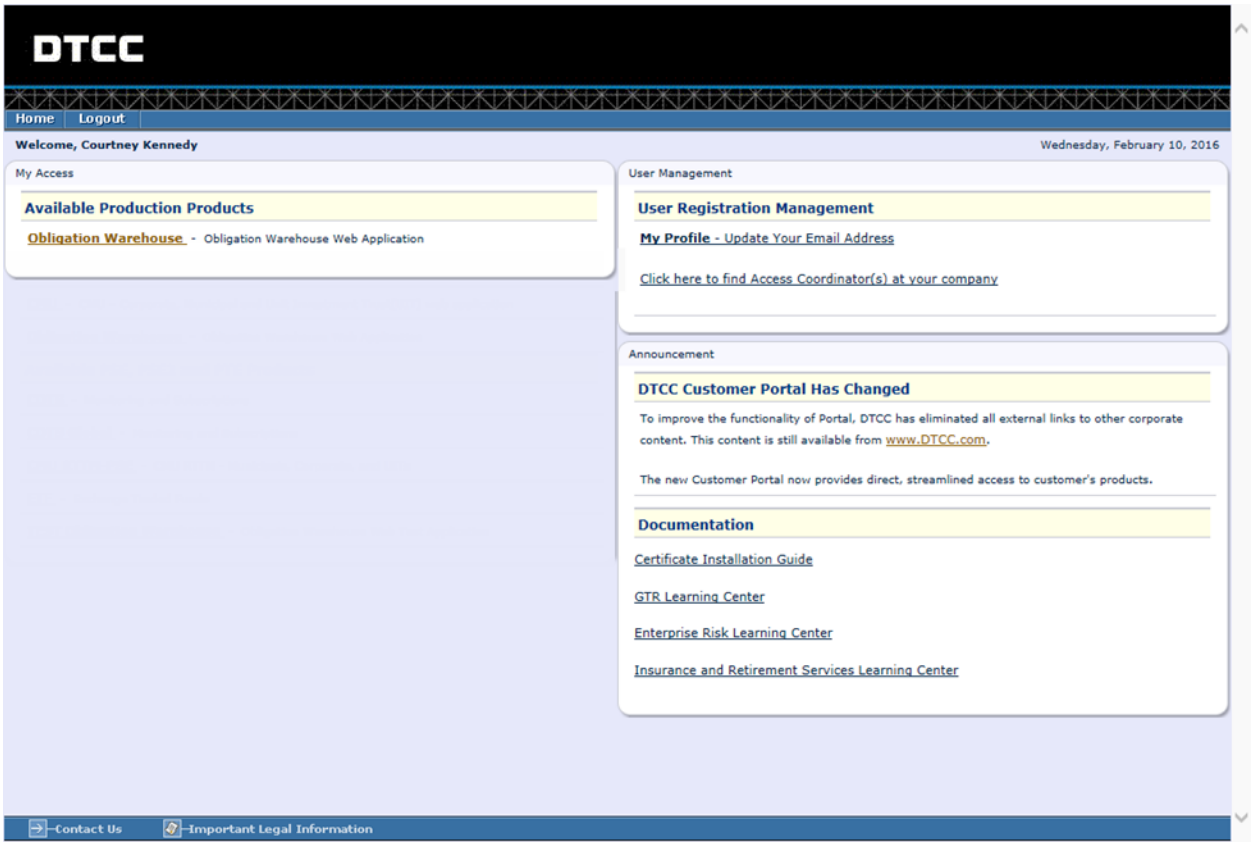

Figure 17.2.2 – Product Selection screen

Click the Obligation Warehouse selection to be directed to the Obligation Warehouse Home page.

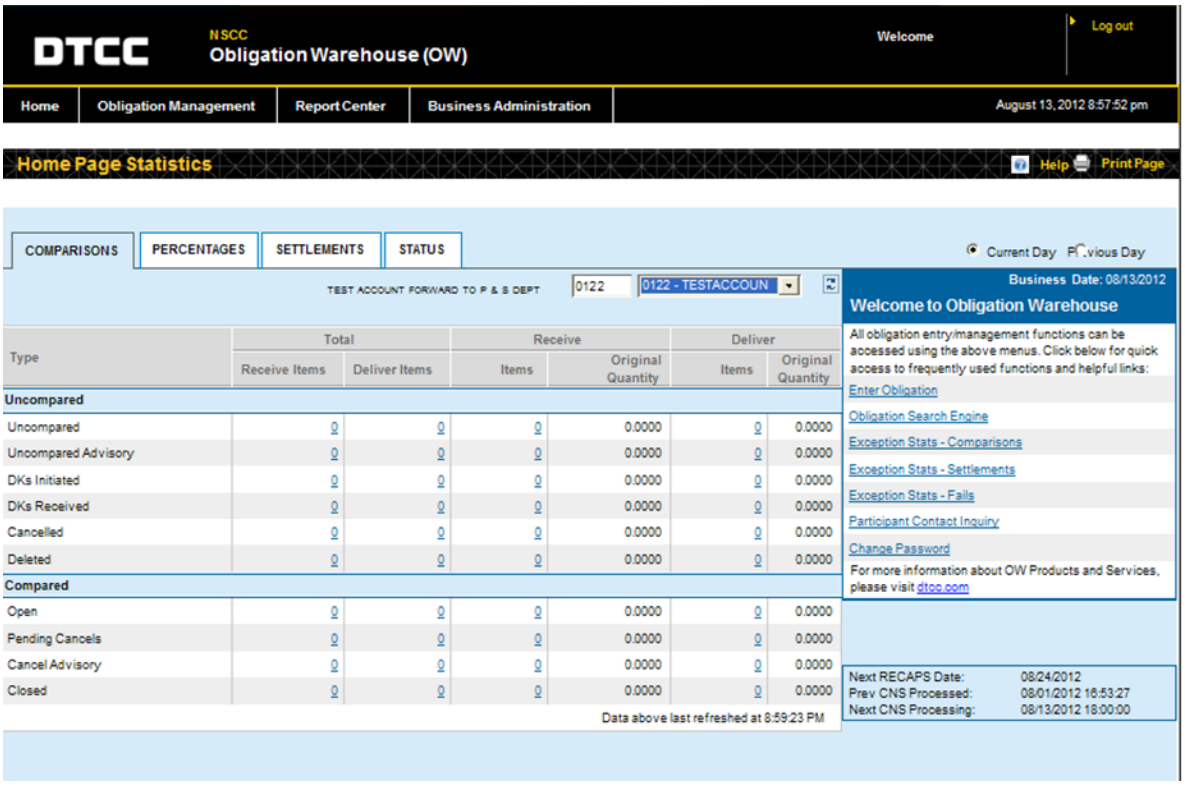

17.2 Home Page

To access the home page, click Home.

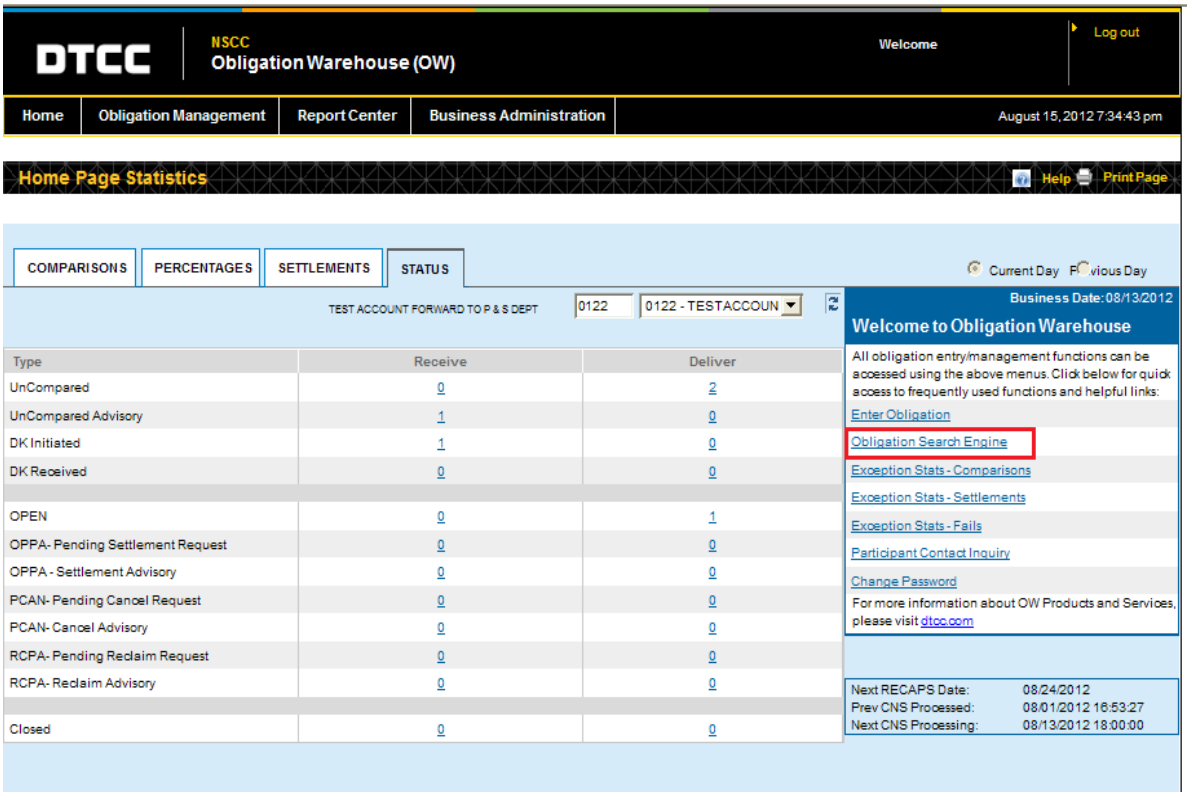

Figure 17.3.1 Home page, noted on the menu bar

The Menu bar at the top provides access to each segment of the Obligation Warehouse Web. The Home selection will always bring you back to the Home Statistics page.

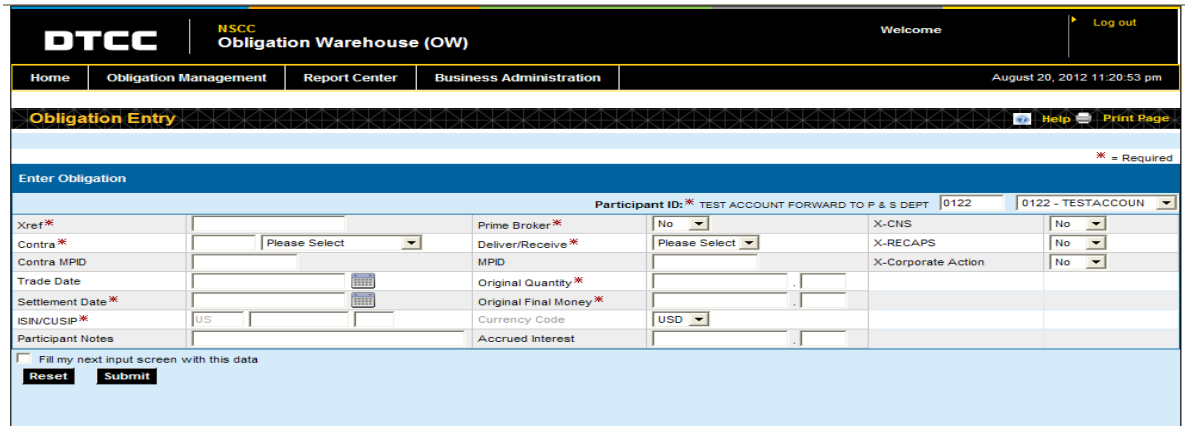

The Home Statistics page of Obligation Warehouse Web is organized into 4 tabs: Comparison, Settlement, Percentages and a new tab –Statistics.

Use the selections on the right hand portion of the screen to quickly access the page you want to view. Select Enter Obligation for the Obligation Entry Page.

17.3 Obligation Entry Page

The Obligation Entry page contains 14 fields to populate. When entering on the screen, you can advance to the next field by hitting the Tab key.

Field Descriptions—Fields entered by the participants

* denotes mandatory field, m represents matching criteria.

*	m	Field name	Description	Guidelines for Obligation Warehouse Web input
*	m	Participant ID	Your NSCC participant number	-Full service NSCC member number (4 digits) or use the drop down list
*		X ref	External reference number created by your firm as a unique number for the obligation	-Up to 16 alpha-numeric characters, case sensitive. -No special characters (e.g. -, \, @, &. ~). -Must be unique.
*		Prime Broker	Your submission is on behalf of a Prime Broker	Select yes if the obligation is a Prime Broker submission -Default is no
*	m	Contra	The contra's Clearing participant number	-Full service NSCC member number (4 digits) or use the drop down list
*	m	Deliver/ Receive	Indicate which perspective your firm represents on the obligation.	Select from drop down list: Receive, or Deliver
*	m	Contra MPID	Market participant identification used as a secondary level identifier, for your contra's correspondent members.	-4 alpha character -No dashes or spaces. -If not applicable, leave blank
*	m	MPID	Market participant identification used as a secondary level identifier, for your correspondent members.	-4 alpha character -No dashes or spaces. - If not applicable, leave blank
*		Trade Date	Trade date of obligation. (MQ messaging required field for input Unknown Trade Date can be populated with Default Value 12/31/9999.)	Use calendar tool for valid business date (If Trade Date is submitted through Obligation Warehouse Web as blank, then MQ translates to the default value of 12/31/9999, on the MQ Comparison messages. Blank Trade Date submission will appear as blank on Obligation Warehouse Web and file output.) - Prior to settlement date (may equal settlement date if in past)
*	m	Original Quantity	Quantity of obligation that is recognized for comparison purposes, (par value of a bond, share value of a stock or unit of trade for a UIT.)	-Up to 14 numeric with floating decimal. -No fractions
*	m	Settlement Date	Date trade is to settle	-Valid date -Use calendar tool
*	m	Final Money	Settlement amount of the obligation being matched. (a.k.a. Original Final Money)	-Up to 14 digits and decimal -Value equals 12 places before decimal and 2 places after

*	m	Field name	Description	Guidelines for Obligation Warehouse Web input
*	m	CUSIP/ ISIN	CUSIP security identification	-USD default -9 character security identifier - ISIN check digit
*	m	Currency Code	Currency in which obligation is denominated.	-Default is US Dollar
*		X-CNS	Request to exclude obligation from CNS®.	-Default is No -If yes is selected, obligation is excluded from CNS permanently.
		X-REOR	Request to exclude obligation from mandatory reorg. adjustment in the Obligation Warehouse system	-Default is No -If yes is selected, obligation will not be adjusted for any mandatory reorganizations
		X-RECAPS	Request to exclude obligation from RECAPS process	-Default is No -If yes is selected, obligation will be excluded from RECAPS
		Accrued Interest	Informational field for use with fixed income securities.	Up to 14 digits and decimal -Value equals 12 places before decimal and 2 places after -Default is blank
		Participant Notes	Text field to be used by participant.	-Free form text up to 32 characters -No dashes or special characters

On the bottom left of the screen is a check box for “Fill my next screen.” Click the check box when you have multiple entries with the same details, this pre-populates the fields with the details for you. To change the pre-populated entry, type over the information displayed.

If the screen needs to be reset due to entry errors, click Reset and all fields will appear blank, or if you were using the “Fill my next input” feature, pre-populated with the fields of the previous entry.

After the required fields are populated and you are ready to submit the trade, click the Submit button and your obligation is entered directly into the Obligation Warehouse Web system.

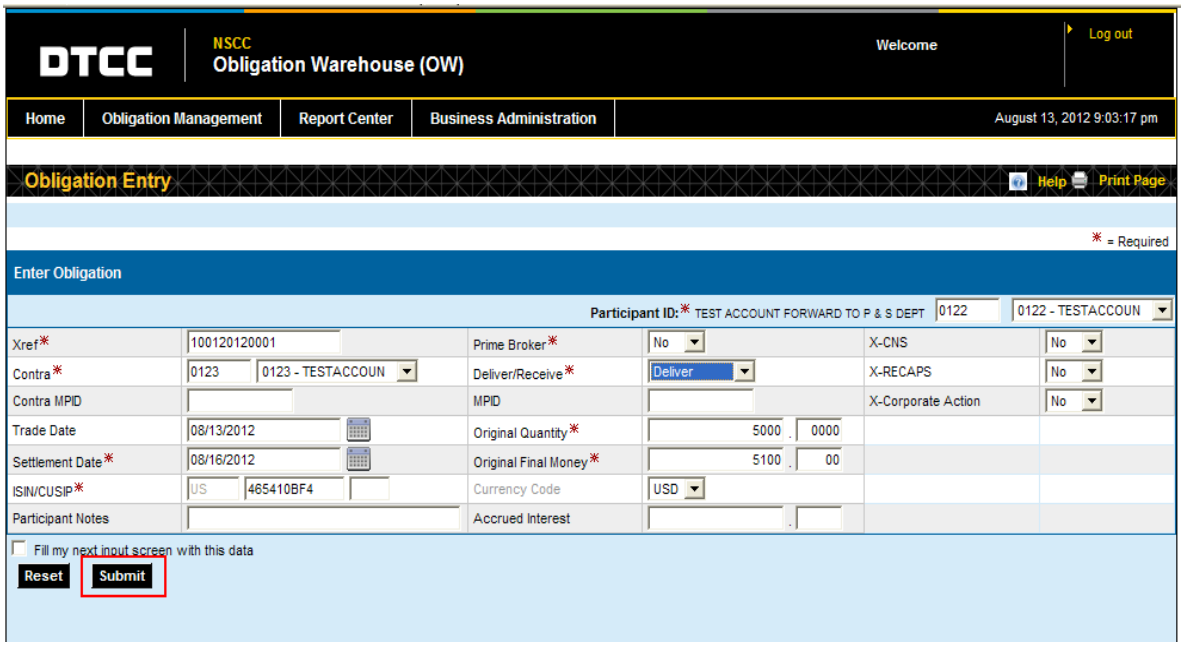

Figure 17.4.2 – Obligation Entry screen, Submit

Fields generated by the Obligation Warehouse system:

- Xref—When an obligation is accepted from another system internal, the Xref will be:
  - ACATS—the ACATS system ID and sequence number,
  - NSCC Balance Orders—the Balance Order control number,
  - CNS exits—spaces only.
- OW ID—a 16 character alpha numeric identifier that is generated by the Obligation Warehouse Web system when an obligation is accepted. The format is as follows: Letter W, 4 character year, 3 character Julian date, 8 character numeric, (Wyyyyjjjxxxxxxxx).
- OW Control Number—Upon matching an obligation is opened in the warehouse and both the Deliver and Receive sides of the obligation will be given the same OW Control Number, which is a ten digit alpha numeric combination. The format is as follows: Letter W, 4 character year, 3 character Julian date, 8 character numeric, (Wyyyyjjjxxxxxxxx).

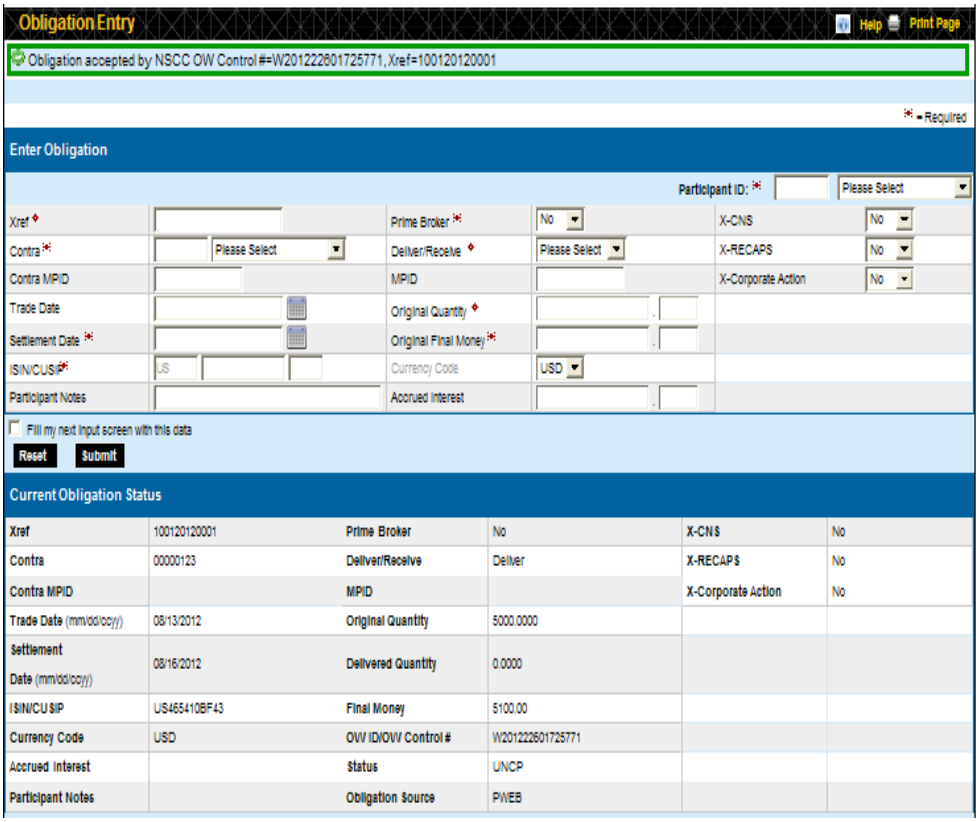

Figure 17.4.3 – Obligation Entry, Accepted, Comparison Request Created

If the obligation passes the validation check, the entry is accepted and the system will respond with "Obligation Accepted" message.

17.4 Statuses of Obligations

All obligations are assigned a status in the Obligation Warehouse system upon acceptance into the system. Statuses determine the actions available to be taken against a specific obligation and are updated as various events occur over the life of the obligation. The Home page and Exception Stats pages have been organized to assist participant with managing obligations where actions should be taken.

1. Uncompared – Obligation entry has been submitted to Obligation Warehouse.
    a. Modify – The submitter of the obligation can modify the obligation as long as no deliveries have been made on it and it is not yet matched.
    b. Cancel – The submitter of the obligation can cancel the obligation
2. Comparison Advisory – Upon receipt of an obligation entry, Obligation Warehouse creates a notification to the contra known as a "Comparison Advisory." Disincentive fees are imposed on all aged 5 days or older Comparison Advisories.
    a. In response the contra can Affirm the advisory on the screen or
    b. Submit like details for matching, through interactive message and the obligation could be matched and opened

3. (Comparison) DK (Don't Know) – The contra to the obligation has informed the participant that the entry is not correct, in error, or un-identifiable. Upon DK the obligation is not available for matching until resolution.

    a. DK Initiated – you have sent the DK to the contra
    b. DK Received – you received the DK from the contra.

4. Open—Obligations where all entry fields were matched upon receipt:

    a. Bilateral agreement from submitter and contra
    or
    b. Automatically, such as ACATS, NSCC Balance Order and CNS exits.

5. Pending Cancel – Request to cancel an obligation that needs affirmation from the contra to close.

    a. Pending Cancel – Where the submitter requests a cancel of a compared obligation.
    b. Pending Cancel Pending Delivery – Where the submitter requests a cancel of a compared obligation and a Delivery Notification Request is pending acceptance.

6. Pending Cancel Advisory – Receipt of a request from the contra to cancel an open obligation. Action is required within 2 days or disincentive fees are imposed.

    a. Upon receipt of cancel request, Obligation Warehouse creates a notification to the contra known as a "Cancel Advisory."
    b. Pending Cancel Pending Delivery Advisory indicates outstanding delivery information is requiring action on the Pending Cancel. Action is required within 2 days or disincentive fees are imposed.

7. In response the contra can Affirm the advisory on the screen or submit like details for matching, through an interactive message and the Obligation will be canceled.

8. Deliveries – Both parties of the obligation have agreed that the item was delivered either through or outside of the DTC Settlement systems.

    a. Partial Delivery – A portion of the overall obligation has been satisfied and delivered.

        i. Uncompared Pending Delivery
        ii. Pending Delivery (compared obligation in OPEN status)

9. Pending Delivery – One party of the obligation is indicating that settlement has occurred. Bilateral agreement from the contra is needed to accept the delivery information.
10. Delivery Advisory – Receipt of a request by the contra to close an obligation due to a delivery being completed.

    a. Upon receipt of Delivery Notification, Obligation Warehouse creates a notification to the contra known as a "Delivery Advisory." Action is required within 2 days or disincentive fees are imposed.
    b. In response the contra can accept the Delivery Advisory on the screen or submit like details, through interactive message and the obligation will be updated with settlement information.

c. If agreement of settlement information takes place for a full delivery on a matched obligation, the obligation will move into a closed status.
d. Full Delivery—A full delivery can appear on an uncompared obligation, once matched the obligation will then close. Full delivery on an obligation marked for Prime Broker will always close it, regardless of comparison status.

    i. Uncompared Delivered
    ii. Delivered Closed.

11. Delivered (Closed) – The obligation has been closed because it was fully delivered.
12. Reclaims – Refers to delivery reclaims that are communicated to Obligation Warehouse to re-open an obligation. Reclaims can be initiated on both uncompared and compared obligations.

    a. Uncompared reclaims will re-open an uncompared obligation unilaterally.
    b. Obligations which were previously compared and closed that have a Reclaim Notification Request submitted require bilateral agreement from the contra, whether original delivery information was from DTC Settlement or received directly in the Obligation Warehouse system.

13. Pending Reclaim – Request to re-open an obligation in the Obligation Warehouse system has been made within 2 days of when the item was previously closed and results in a Reclaim Request Advisory being received by the contra.
14. Reclaim Request Advisory – Result of a Reclaim Request being submitted the advisory is sent to the contra.
15. Canceled – Indicates that an uncompared entry has been canceled or bilateral agreement has taken place to close a Pending Cancel.
16. Deleted – Items can be marked for delete, as a result of an update that deems the information is no longer applicable (i.e. Mark for Delete a Comparison Request to contra upon matching); or through an administrative action.

Other Obligation Warehouse automated Business Events include:

17. Participant Swing – Open matched obligations affected by the administrative action of Participant Swing, whereby an obligation was closed and a new obligation created reflecting the new participant information.
18. Mandatory Reorg. – The system action of applying a mandatory reorganization of a security to an open matched obligation. The affected obligation was closed and a new obligation created reflecting the obligation after the corporate action event was applied. Cash components of the corporate action can be found on the Cash Reorg. report in the Obligation Warehouse Web Report Center.
19. RECAPS – All open matched obligations which have gone through the RECAPS process were closed and a new obligation opened.
20. Sent to CNS – Open matched obligations that were closed and sent to the CNS system.
21. Administrative—on occasion obligations will be closed due to administrative reasons.
22. Pair off—Open matched obligations where the Pair Off indicator is set to YES will be included in the process. Upon completion of the Pair off process a file/ report will be generated to show the obligations included any related cash adjustment.

17.5 Obligation Search Engine

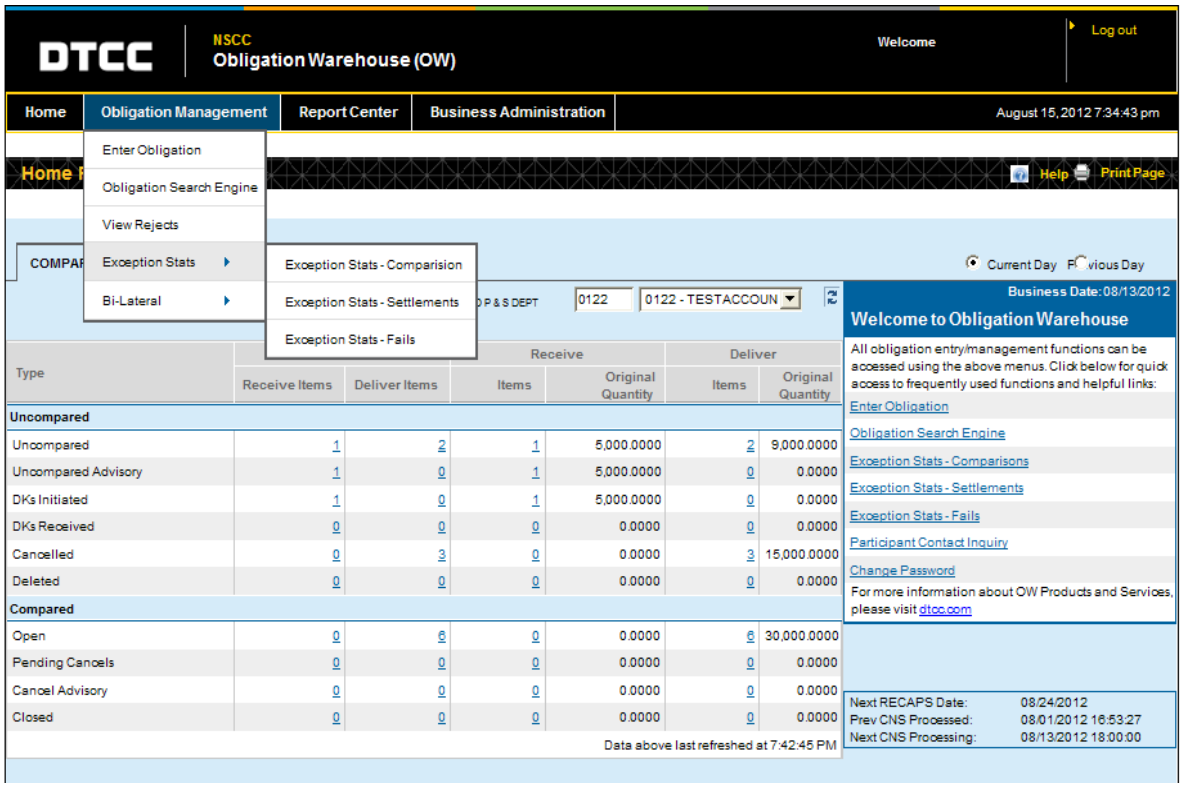

Figure 17.6.1 – Obligation Warehouse Web Home Page, Menu pull-drop down, Obligation Search Engine

The Obligation Search Engine is used to access obligations that were previously submitted by either party. It offers several options and allows you to Quick Search for a single item; or use an Advanced Search for multiple obligations.

A Quick Search uses a specific identifier, such as the cross-reference number, OW ID, or Obligation Warehouse control number. The query result is limited to the exact item.

For an Advanced Search use any entry field and a status as criteria to return a list of obligations that meet that request.

Performing an Obligation Search

From the Obligation Warehouse Web Home page select Obligation Management, Obligation Search Engine from the Main Menu (or use the quick link on the right side of the home page). The Obligation Search Engine screen is displayed.

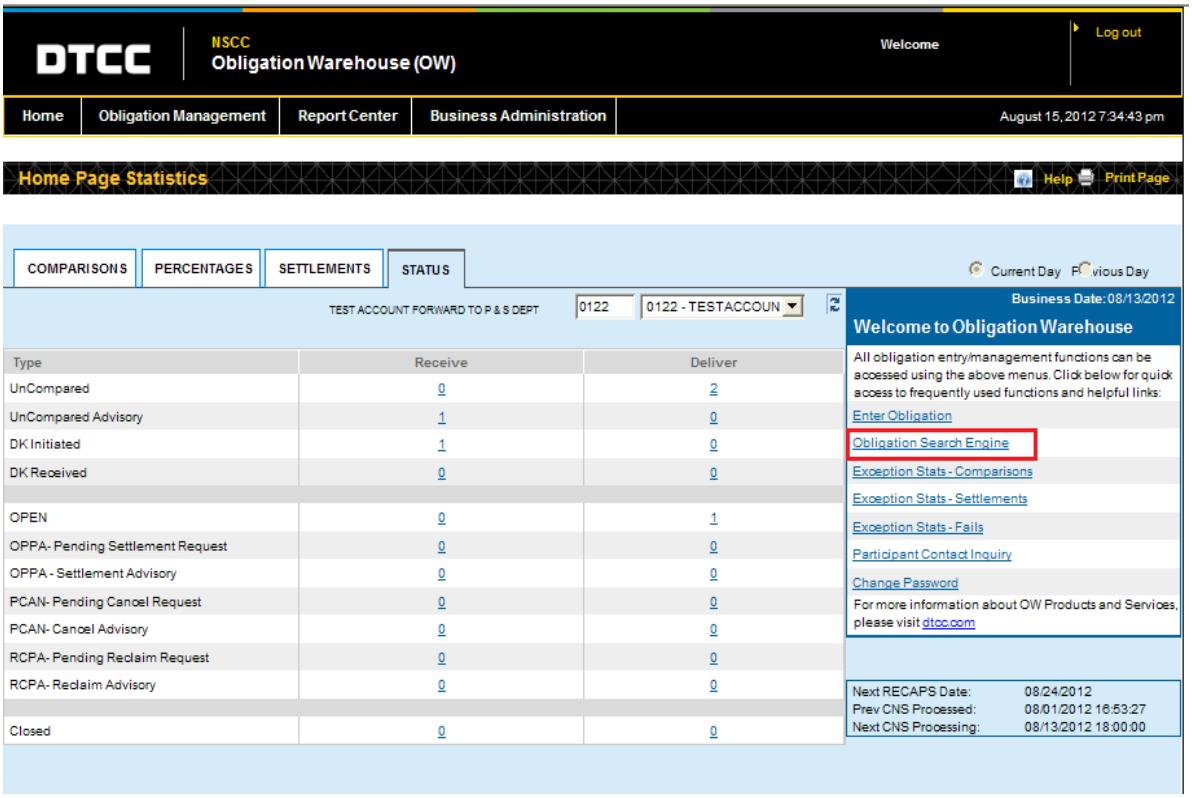

Figure 17.6.2—Obligation Warehouse Web Home Page, Quick Link, Obligation Search Engine

Field Descriptions

Quick Search

Use Quick Search to find a specific item. Select a reference number type (Xref number, Obligation ID, OW Control Number). Click the Search button next to number.

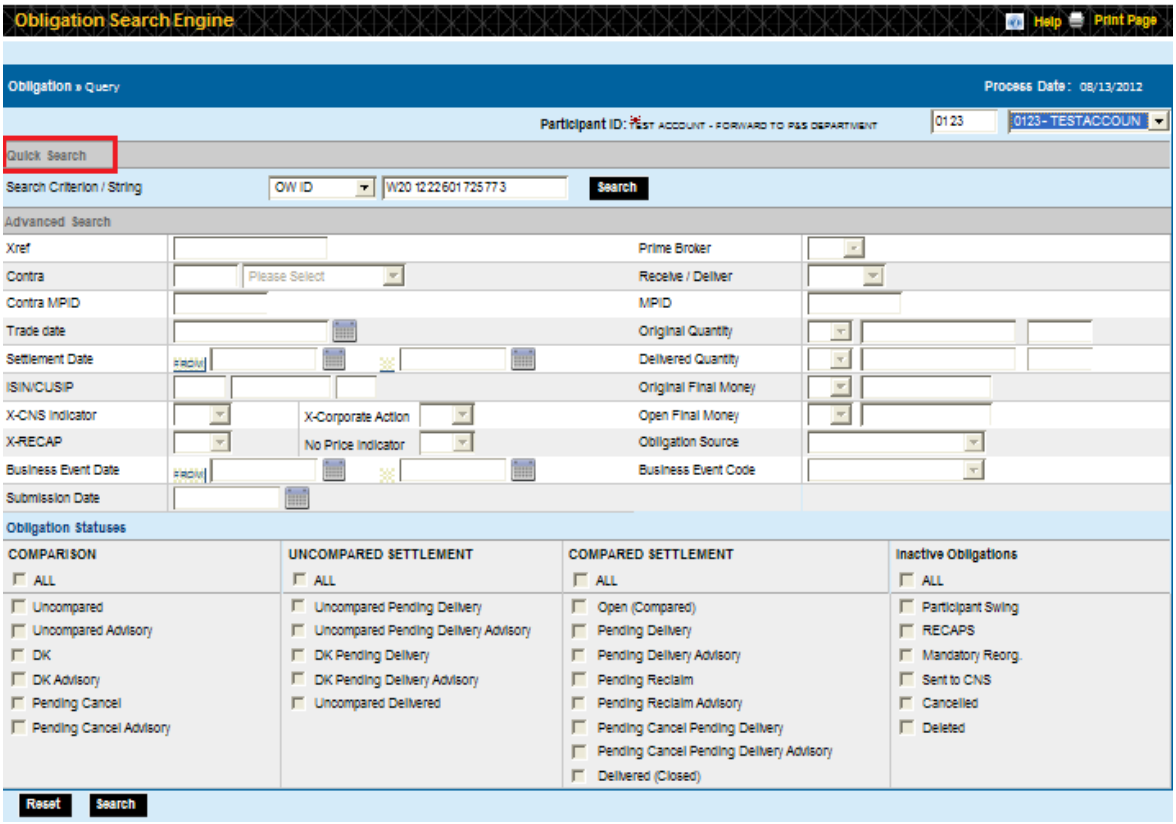

Figure 17.6.3—Obligation Search Engine, Quick search

Advanced Search

Use the Advanced Search method to list all obligations that satisfy selected search criteria of a given status.

Obligation Statuses are only mandatory criterion for multiple obligation searches.

You must select an Obligation Warehouse Status using one of two options.

- Select a single obligation state and limit the search results to the obligations of the selected status and search criteria.
- Retrieve the entire column of statuses of the obligations using the ALL check box. Note the columns are categorized: Uncompared, Uncompared Settlement, Compared Settlement, and Inactive Obligations.

You can customize the search using a combination of the various obligation statuses and obligation criteria. You must select either a single Obligation Status or at the top of the column ALL (Uncompared, Uncompared Settlement, Compared Settlement, and Inactive Obligations).

The remaining search fields are optional and allow the search to be defined as narrowly or broadly as desired. You can search a broad scope such as all Uncompared obligation entries by activating only the Uncompared check box, or limit the search to something more specific by any of the obligations details.

Several fields include operator drop-downs (=, <=, >=) that allow you to search for either a fixed valued or a range. For example, a query may by defined to look for all transactions that have a Quantity of 100 (= 100) or a quantity of less than or equal to 100 (<= 100).

No wildcards are accepted as search criteria.

When all the search criteria have been selected, click Search, at the bottom left side of the screen. If you need to reset the screen to all blanks to begin again, click, Reset.

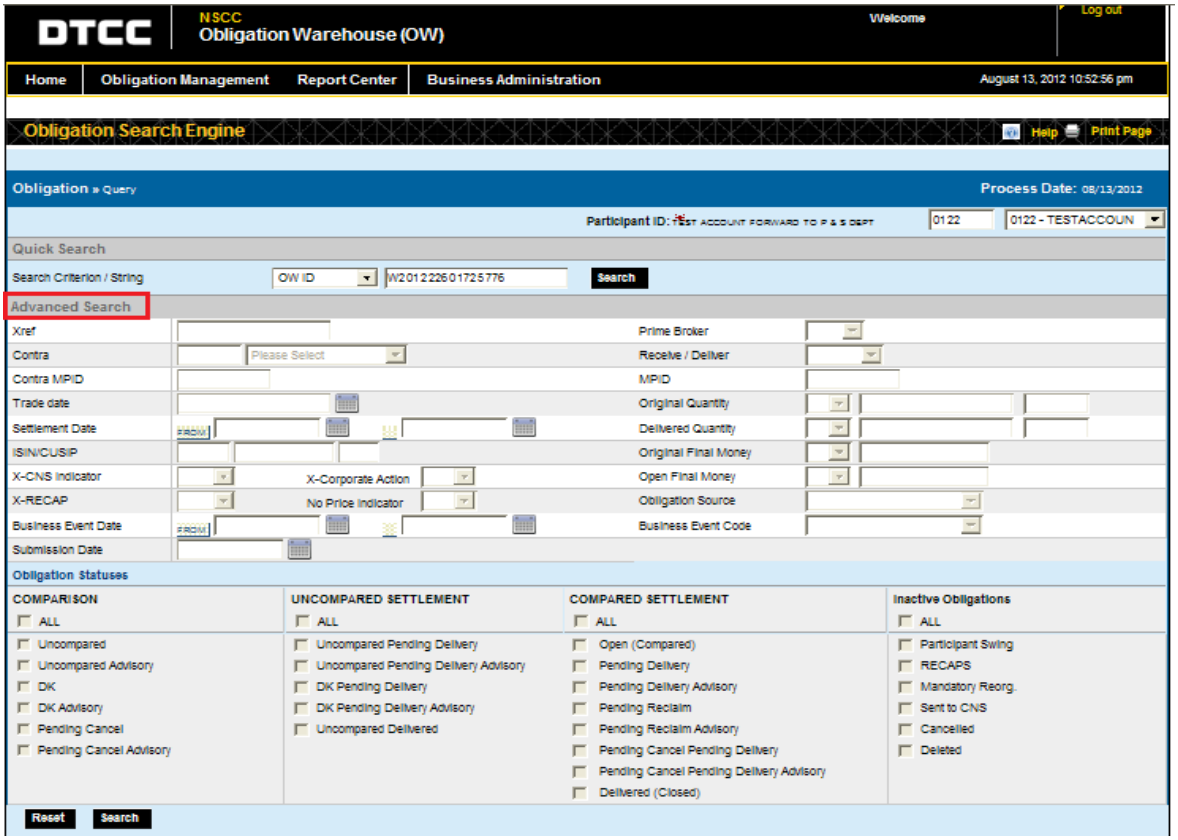

Figure 17.6.4—Obligation Search Engine, Advanced Search

UNCOMPARED	UNCOMPARED in SETTLEMENT	COMPARED in SETTLEMENT	Inactive Obligations
Uncompared (UNCP)	Uncompared Pending Delivery (UNPA)	Open (Compared) (OPEN)	Participant Swing
Uncompared Advisory	Uncompared Pending Delivery Advisory	Pending Delivery (OPPA)	RECAPS
DK (DKUN)	DK Pending Delivery (DKPA)	Pending Delivery Advisory	Mandatory Reorg.
DK Advisory	DK Pending Delivery Advisory	Pending Reclaim (RCPA)	Sent to CNS
Pending Cancel (PCAN)	Uncompared Delivered	Pending Reclaim Advisory	Canceled (CANC or CLSD – closed due to cancel)
Pending Cancel Advisory		Pending Cancel Pending Delivery(PCPA)	Deleted (MKDL)
		Pending Cancel Pending Delivery Advisory	
		Delivered (Closed) (CLSD)	

Based on the Obligation Search criteria in the Obligation Warehouse system the query results are displayed on the Obligation Search Results screen. Although the layout of this screen is consistent from one query to

the next, the data and the amount of data will vary according to the specific request. Refer to the next section for a detailed explanation of the Obligation Search Results screen.

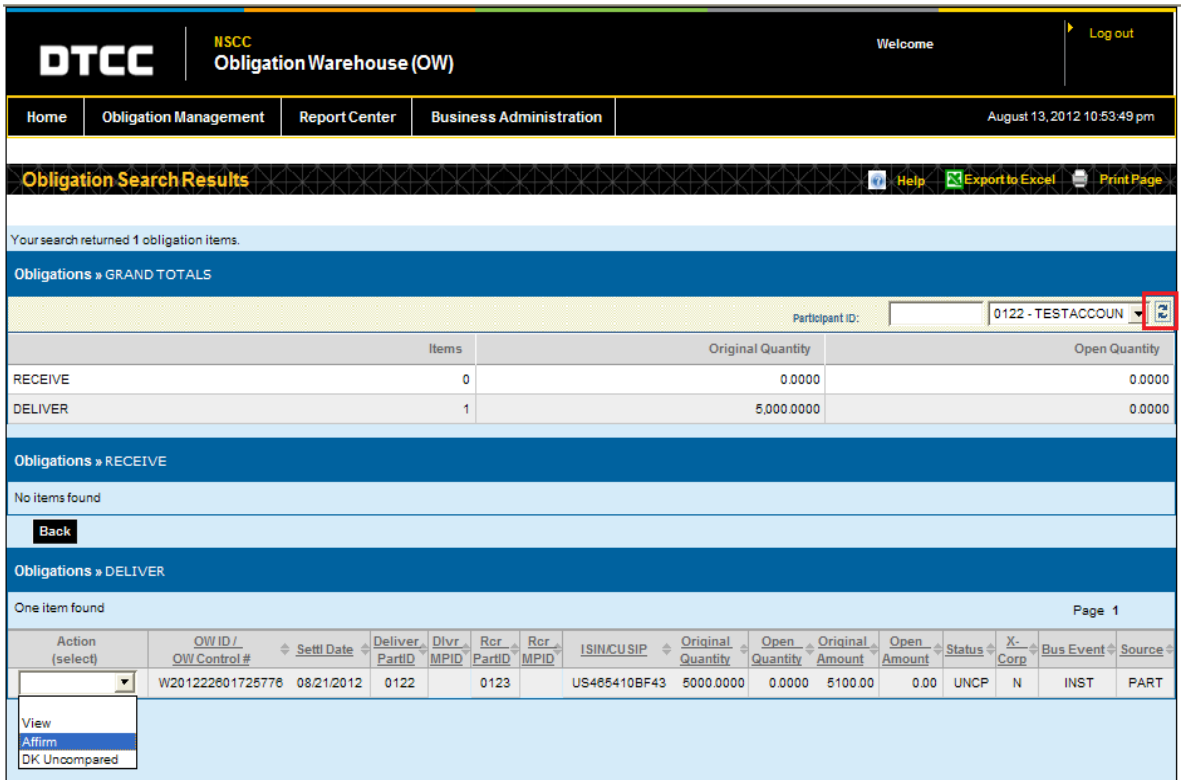

Figure 17.6.5—Obligation Search Results

17.6 Obligation Search Results

Each record in the Obligation Search Results screen is a transaction that you can View, Modify (if appropriate), or take further actions against (depending on your perspective of receiver or deliverer, and the obligation comparison and settlement status).

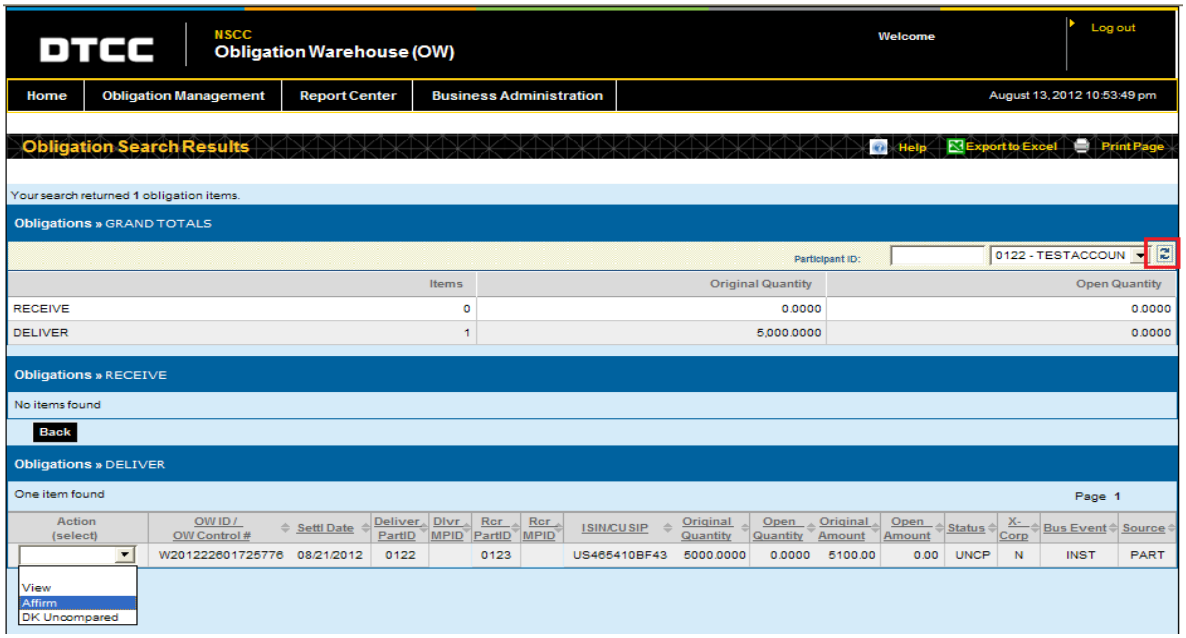

Figure 17.7.1—Obligation Search Results, Total Results

1. The quantities displayed in the Totals panel refer to the Obligation Search Results. These amounts do not reflect grand totals.
2. Obligation Search Results screen can be sorted by different headings. Click the heading to sort obligation details by that column (either ascending or descending order).
3. Only one obligation matching the inquiry is listed in above figure, but results could span numerous pages, limited to a maximum of 1,500 obligations.

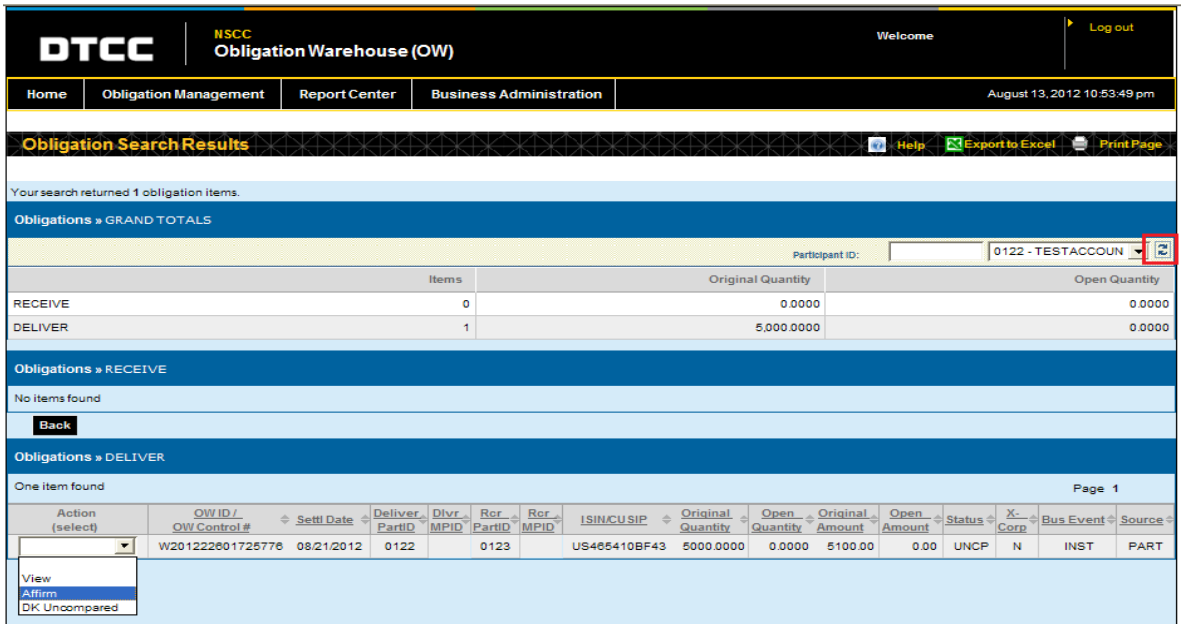

Figure 17.7.2—Obligation Search Results, Refresh

4. Click the Refresh button to update the Obligation Warehouse screen with the most current data.

5. Click the Open New Window link to launch a second window, allowing simultaneous viewing of multiple screens. For example, you can monitor the home page in one window and submit obligation(s) in another.
6. Use the drop-down list to compile obligation of a specific type.
7. Actions can be taken directly against obligations from the Obligation Search Results screen. The Action column includes a drop-down list for each record. See the Action's section of this user guide. Obligation status and the business rules define the available actions to be taken. Click the drop-down list for the record you want to address, and then select an Action.

17.7 Available Actions for Obligations on Obligation Warehouse

After the obligations have been entered into the Obligation Warehouse system, they can be retrieved through the Obligation Search Engine or by clicking on the quick links on the Home page. Both methods generate an Obligation Search screen. Upon submission of the query, an Obligation Search Results screen is returned that, depending on how specific the query was defined; results could return one obligation or many pages of entries. Every Obligation Search Results screen includes a drop-down list for each item that can be used to initiate further actions against that obligation entry.

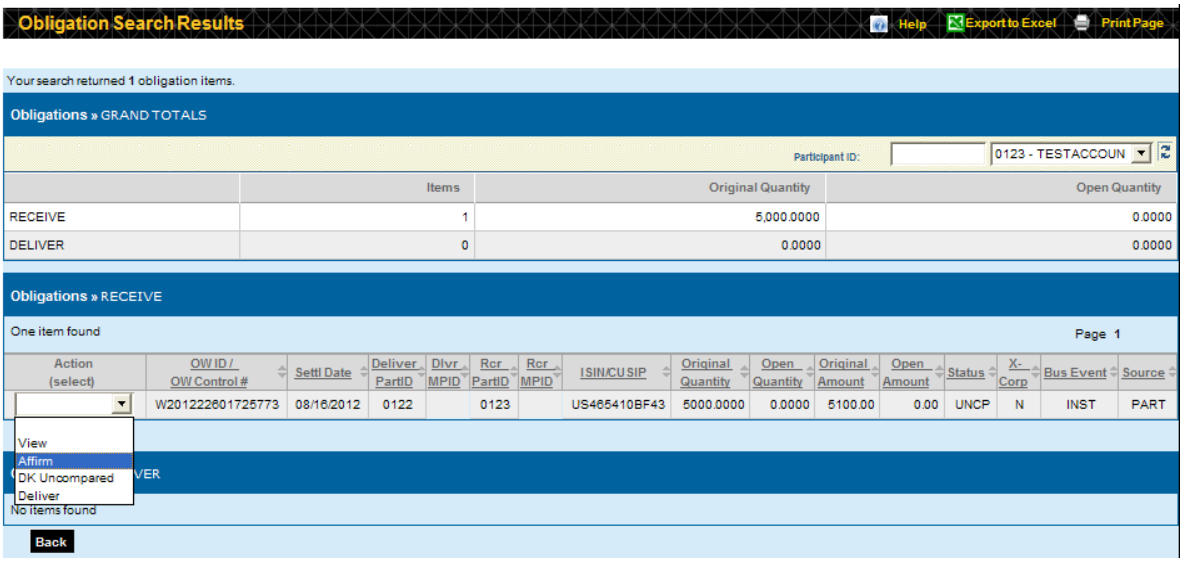

Figure 17.8.1—Obligation Search Results, Actions drop-down

Regardless of the method used to generate an Obligation Search Results screen, the search results screen is laid out identically. The obligation status, as well as, the participant's role determines the actions available and can be viewed by using the drop down box.

a. View – Display the most current version of the obligation. The View function also offers a detailed look at the obligation, including all tracking ID's, history.
b. Affirm – An Affirm eliminates the need to manually populate an obligation entry screen for your side of the obligation. In just a few keystrokes you can Affirm an advisory, declaring that you agree with the obligation entry details submitted by the contra, and automatically generate your offsetting matched open obligation.
c. DK (Don't Know)—Notify a contra who submitted an obligation entry against your account that you disagree or do not know the obligation. The DK can be made against:

1. Comparison Advisory
2. Cancel Advisory
3. Delivery Notification received.
4. Reclaim Notification received

d. Un-DK – This feature is to remove a DK that you previously marked.
e. Cancel – Cancel an obligation submission. If the obligation has an OW Control Number assigned (which indicates it is a compared item,) then both Deliverer and Receiver must agree to cancel the open obligation. The Cancel action is available for:

1. Uncompared items
2. Open Obligation (requires agreement of both parties)
3. Delivery Notification initiated
4. Reclaim Notification initiated.

f. Un-Cancel – This feature is to remove a Pending Cancel from a previous Cancel action.
g. Modify – Modify details of a previously submitted uncompared obligation entry.

(It is only available if delivery events have not occurred on the obligation.)

h. Deliver Notification Request – Initiate a request to the contra to ask for acknowledgment of a delivery (either partial or full) made, regardless of whether in or outside the DTC Settlement system.
i. Accept Delivery Notification – Agree the Delivery notification is correct. Can occur as a full or partial delivery request.
j. DK Delivery Request – Notify the contra that your firm disagrees with the Delivery Notification Request received.
k. Reclaim Notification Request – Submit a request to the contra to acknowledge the settlement reclaim.
l. Accept Reclaim Notification – Agree that the settlement reclaim notice is correct. Can occur in partial or full settlement reclaim.
m. Exclude from RECAPS – Obligations can be withheld from the RECAPS cycle by marking “X RECAPS,” at any time by either party, whether in one of the uncompared or open statuses. When X-RECAPS = yes, then it can only be changed to no by the party who set it. Once an obligation is marked as X-RECAPS= yes, by either party to the obligation, it is not eligible for the RECAPS process. The exclusion from RECAPS will remain on the obligation until removed by the submitter.
n. Include for RECAPS—Default value for Obligation Warehouse. Any obligation marked to exclude from RECAPS can later be included.
o. Exclude from Reorg. – Obligations can be excluded from the automated mandatory reorganization events that are automated in the Obligation Warehouse system.
p. Exclude from CNS – Marking an obligation as X-CNS=yes by either party will exclude the obligation from being closed and sent to CNS.

1. If the exclusion from the CNS eligibility check is selected prior to comparison then it becomes a matching criteria. When an obligation has been compared with X-CNS = yes, then the exclusion cannot be undone.
2. If the exclusion is selected after the obligation has been compared, then either party can withhold the obligation from being closed and sent to CNS. Only one party to the obligation needs to mark it X-CNS = yes for the exclusion to activate.

q. Include for CNS—Default value for all obligations matched in the Obligation Warehouse system. Any obligation that was marked as X-CNS = yes after the comparison, can be changed by the submitter of the exclude to allow for the obligation to be included in the CNS eligibility check.
r. Include for Pair off—marking an OPEN obligation as include for the pair off process will allow it to be considered for pair off if both parties have specified YES to include for Pair off.
s. Exclude for Pair off—Default value for all obligations matched in the Obligation Warehouse system.

17.8 Comparisons–Bilateral Advisory Split View

Bilateral Advisory Split View –Comparisons displays all of your Advisories and Un-Compared obligations in a single screen, which can be helpful when attempting to identify potential matches for comparison. Keep in mind that the Bilateral Advisory Split View—Comparison screen provides an overall perspective or your Advisories and Uncompared obligations by the participant selected.

1. Using the Main Menu, select the Bilateral Advisory Split View- Comparison. The screen is displayed.

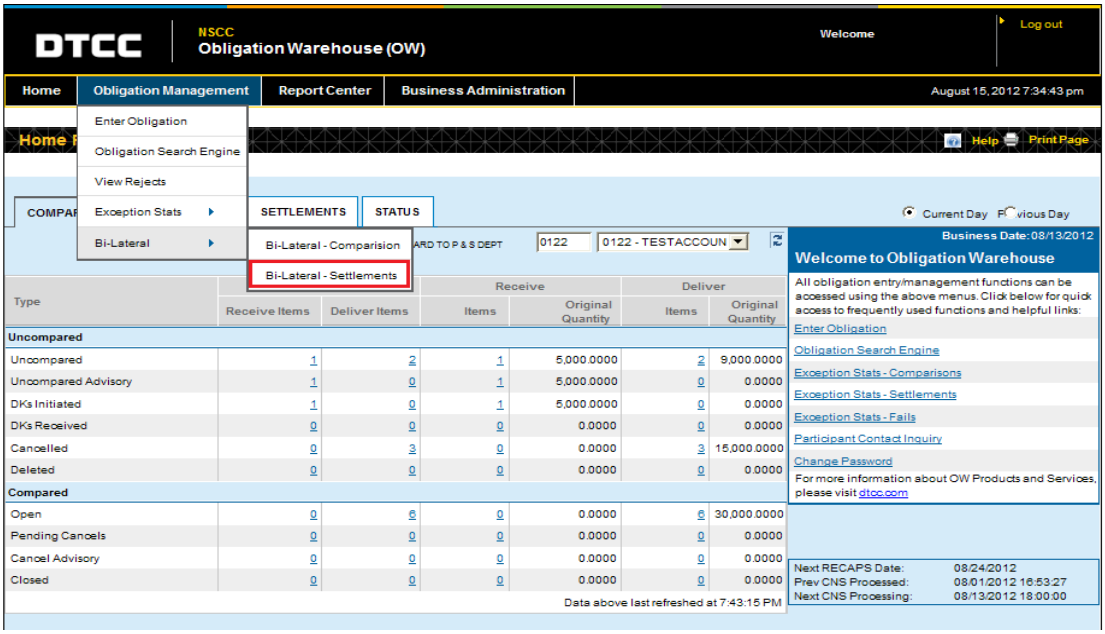

Figure 17.9.1 – Home page, Main Menu, Bilateral Split view

2. Choose Participant ID to view the Advisory portion of the Bilateral Advisory Split View—Comparison

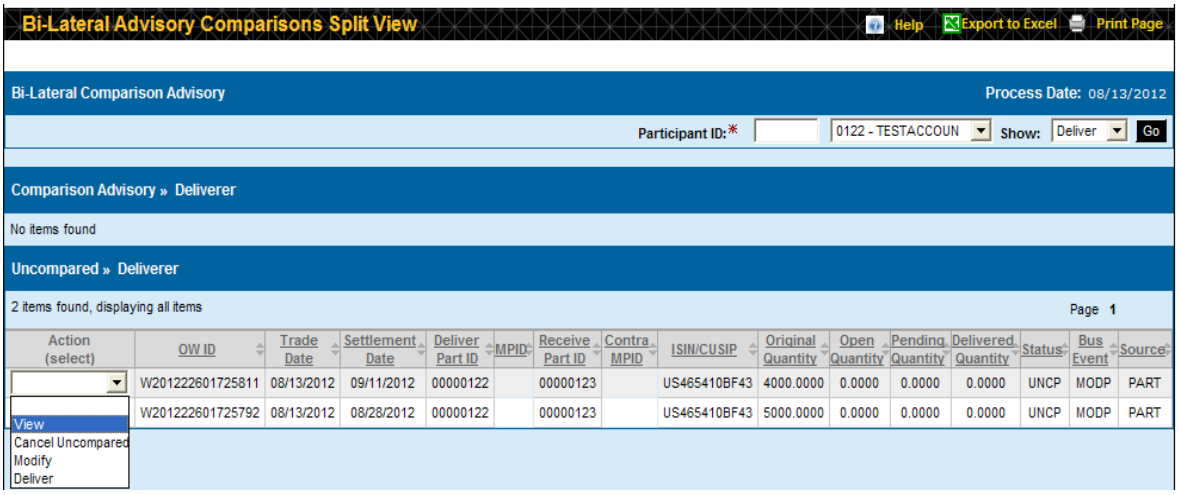

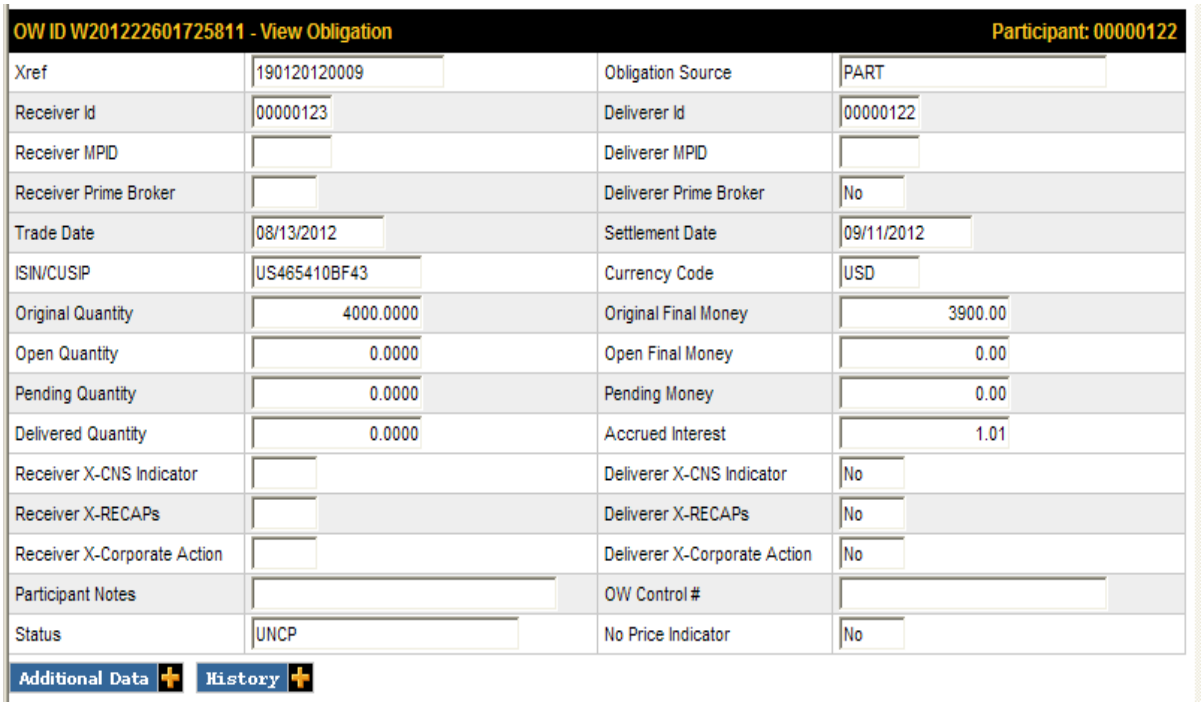

Figure 17.9.2 – Bilateral Advisory Split View--Comparison screen

3. Your Advisories, to the obligations submitted against you are displayed in the top portion of the screen.
4. Your Uncompared obligation entries that could be likely matches are in the bottom half of the screen. Note that if the Advisories are Delivers, then only the Receives are listed for the Uncompared items.
5. Consider the Comparison Advisory and the Un Compared Obligation in above figure. One of the parties may have incorrectly entered the proper final amount. Now, further action can be taken to resolve the error. For example, you can Affirm the Advisory, and Cancel your Un Compared obligation entry. Each Action drop-down list includes only the related Actions that can be taken against that transaction. (Advisory Actions drop-down list includes View, Affirm, and DK. Un Compared Obligation drop-down list includes View, Modify, and Cancel).

Although the Bilateral Advisory Split View was requested by Member #122, advisories are always displayed from the submitter's perspective. For example, the first Advisory is Member #123 Deliver transactions. If member #123 selects View or DK from the Action drop-down, the details of the sell (Deliver) trade are displayed from their (123) perspective. However, if participant #122 selects Affirm from the Action drop-down, the Affirm Page is displayed with #122 matching buy (Receive) side of the obligation, or the obligation that #122 is creating.

Additional Data History

Figure 17.9.3 – View Page as drill down from Bilateral Advisory Split View

17.9 Settlements—Bilateral Advisory Split View

Settled Bilateral Advisory Split View displays all of your Delivery Advisories and Pending Acceptance obligations in a single screen.

1. Using the Main Menu, select the Settled Bilateral Advisory Split View. Then using the drop-down box on the upper right corner, define whether you are the Deliverer or Receiver to the obligation. The screen is displayed with Pending Acceptance Advisories at the top and Pending Acceptance obligations you have outstanding below.

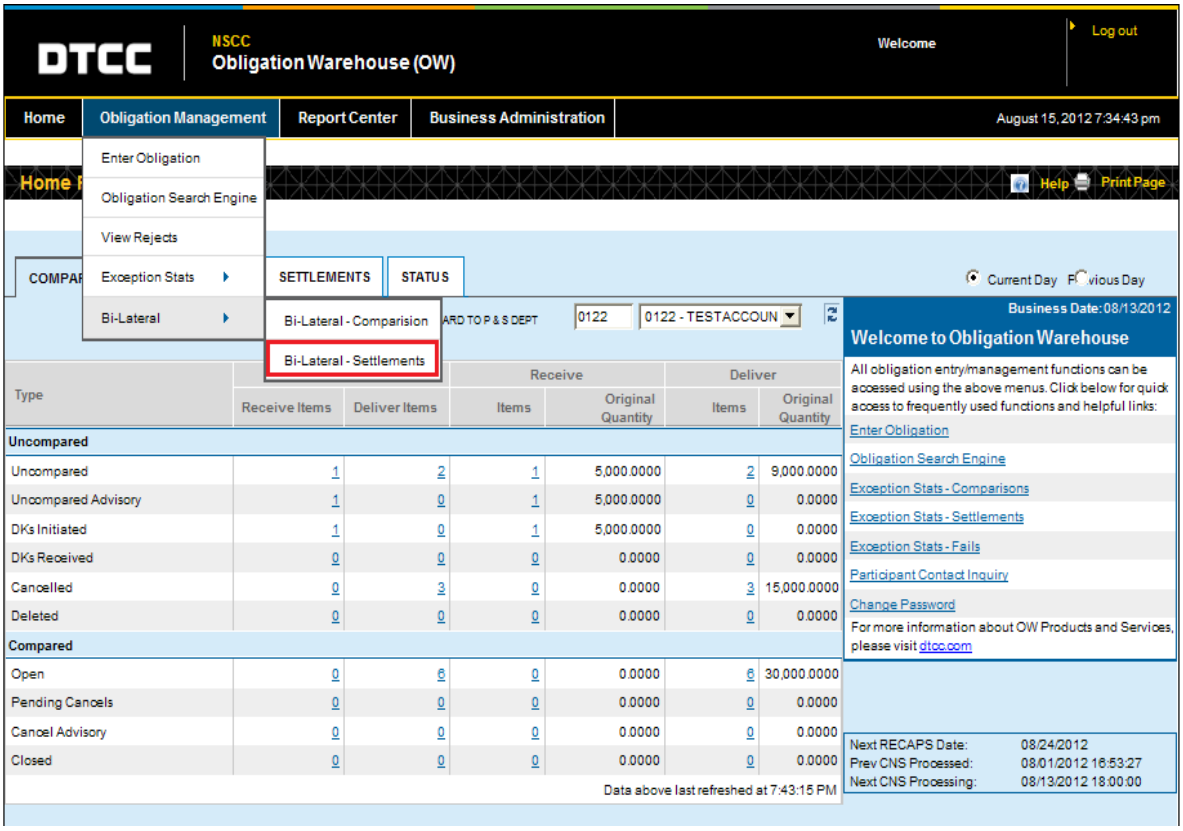

Figure 17.10.1 – Obligation Warehouse Web Main Menu, Bilateral Split Advisory, Settlements

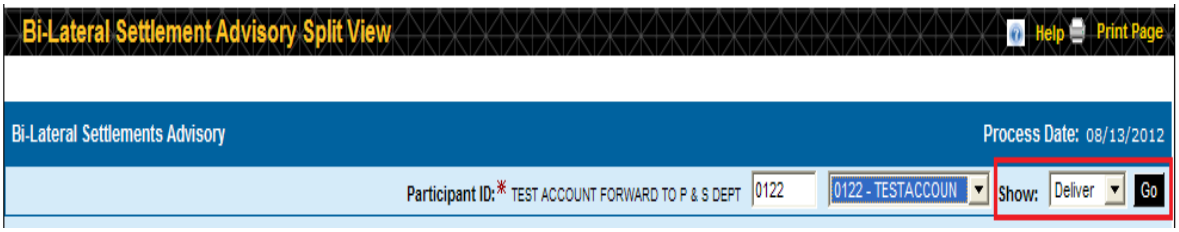

Figure 17.10.1 – Bilateral Advisory Split View--Settlement screen

2. Choose Participant ID to view the Advisory portion of the Settled Bilateral Advisory Split View. Everything can be viewed from the settlement perspective. (See also, Bilateral Advisory Split View, Comparisons.)
3. Your Acceptance Advisories, to the obligations submitted against you are displayed in the top portion of the screen.
4. Your Pending Acceptance obligations that could be likely pair with the entries are in the bottom half of the screen. Note that if the Acceptance Advisories are Delivers, then only the Receives are listed for the Pending Acceptance items.
5. Consider the Acceptance Advisory and the Pending Acceptance obligation in above figure. Each Action drop-down list includes only the related Actions that can be taken against that transaction. (Advisory Actions drop-down list includes View, Accept, and DK. Pending Acceptance drop-down list includes View, Cancel).

The Settled Bilateral Advisory Split View was requested by Member #122, Acceptance Advisories are always displayed from the inquiring member's perspective. For example, the first Acceptance Advisory is participant #123 Deliver transactions. If Member #122 selects View or DK from the Action drop-down the

details of the sell (Deliver) trade are displayed from the Member #123 perspective. However, if participant #122 selects Accept from the Action drop-down, the Accept Page is displayed with # matching buy (Receive) side of the obligation, or the obligation that #122 is creating.

17.10 Exception Stats Comparisons

The Exceptions Stats Comparisons screen is designed to help Operational P & S staff to quickly identify the items needing attention. It provides more details than the Statistics panel on the Home page, Comparisons. The information is organized in a table format categorized by contra to show the number of actionable items for each obligation status.

1. Select Obligation Management, Exception Stats Comparisons from the Main Menu or click the quick link on the right side of the Home page.

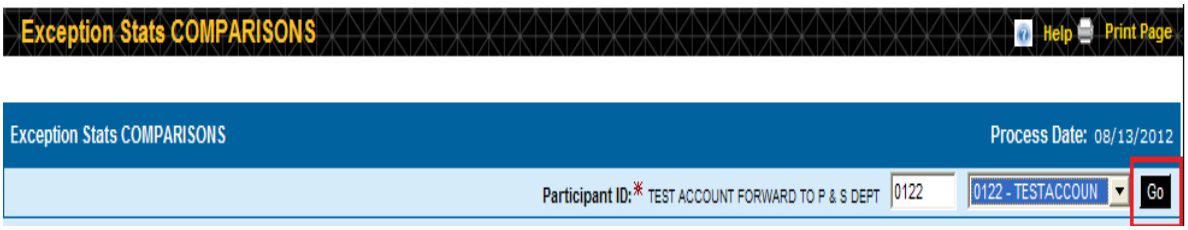

Figure 17.11.1 – Requesting the Exceptions Stats Comparisons page

2. Enter your NSCC Member number and click Go.

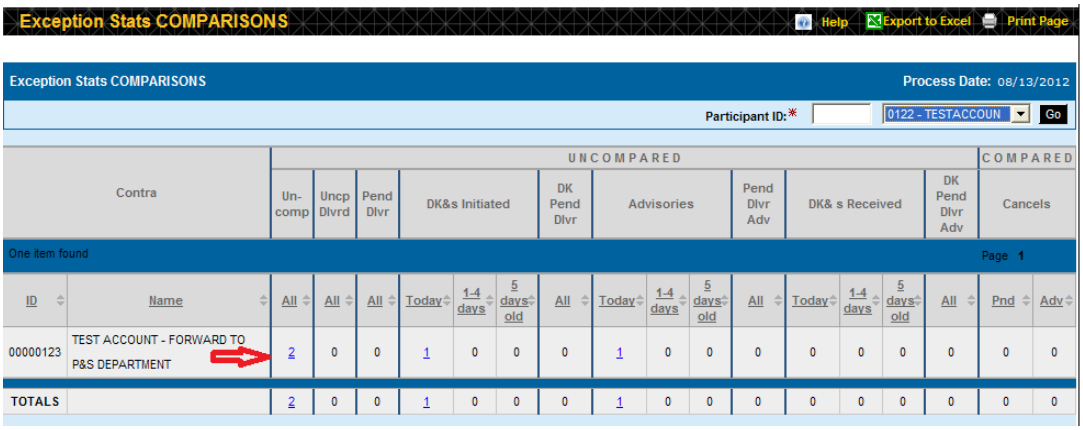

Figure 17.11.2 – Exceptions Stats Comparisons

The columns have been organized under the headings of Uncompared and Compared.

The Uncompared category displays as follows:

- Uncompared—comparison request to the contra, with no settlement activity posted
- Uncompared Deliveries—comparison request to the contra, where settlement information has been posted
- Uncompared Pending Delivery--comparison request to the contra combined with the need to accept settlement information
- DKs initiated – comparison DKs that your firm initiated.
    - Today
    - 1-4 days old
    - 5 or more days old

- DKs Pending Delivery—comparison DKs waiting for the acceptance of settlement information from the contra
- Advisories—the contra has sent you a comparison request for matching, and no settlement information has been posted to the obligation
    - Today
    - 1-4 days old
    - Five or more days old. Action is required within **five** days or disincentive fees are imposed.
- Pending Delivery Advisory – the contra has sent you a comparison request for matching and a request to accept settlement information. Action is required within **two** days or disincentive fees are imposed.
- DKs received – comparison DKs received from the contra
    - Today
    - 1-4 days old
    - 5 or more days old
- DK Pending Delivery Advisory – a comparison DK received from the contra where the contra has posted settlement information for acceptance by your firm.

The Compared category shows Cancels sent to the contra which are Pending and Advisories received.

3. Click any of the underlined numbers in blue to link to the related obligations that make up the item count shown on the Exceptions Stats Comparisons screen for each contra. An Obligation Search Results screen is displayed and then further action can be taken on the individual obligations listed.

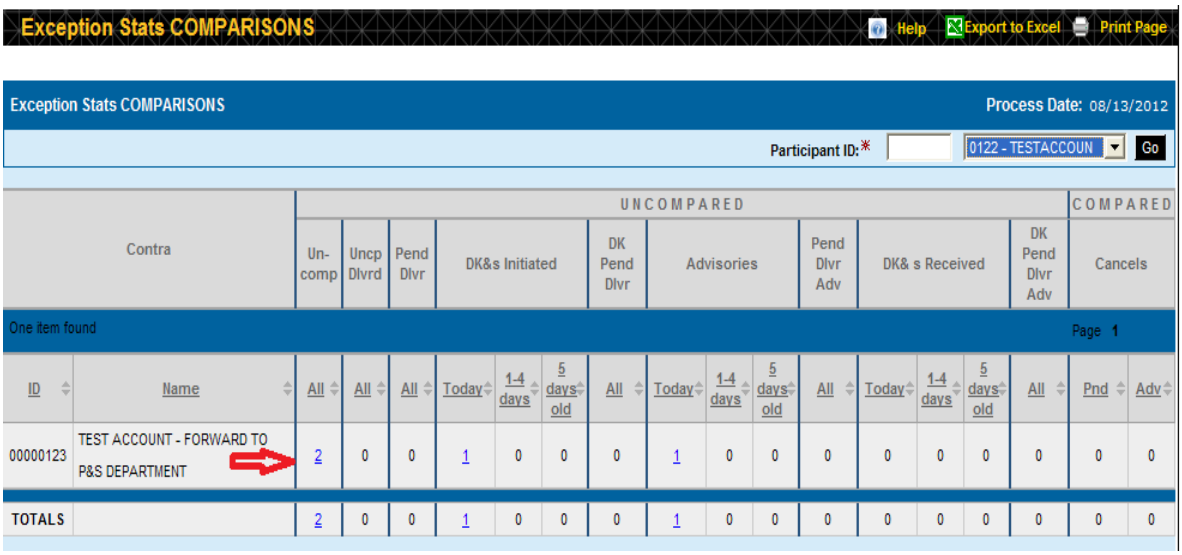

Figure 17.11.2 – Exception Stats Comparisons page, by contra

4. Use the Action drop-down list to see the available further actions on a specific obligation.

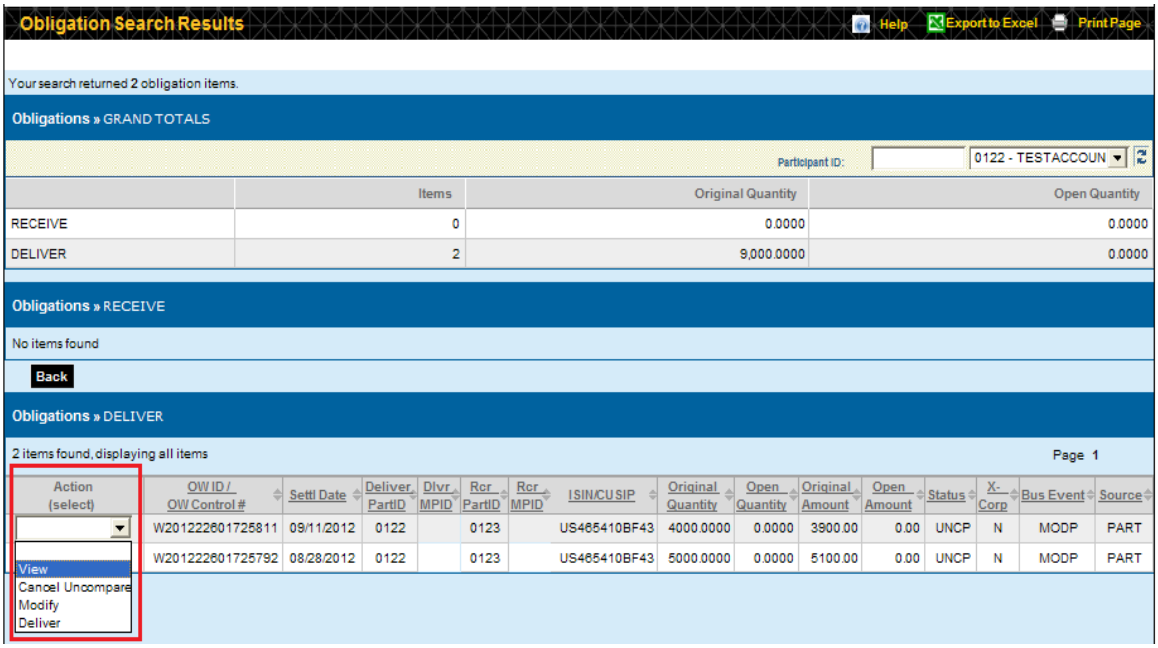

Figure 17.11.3 – Obligation Search Results screen, Action

The view selection will show you a screen with all the trade details populated.

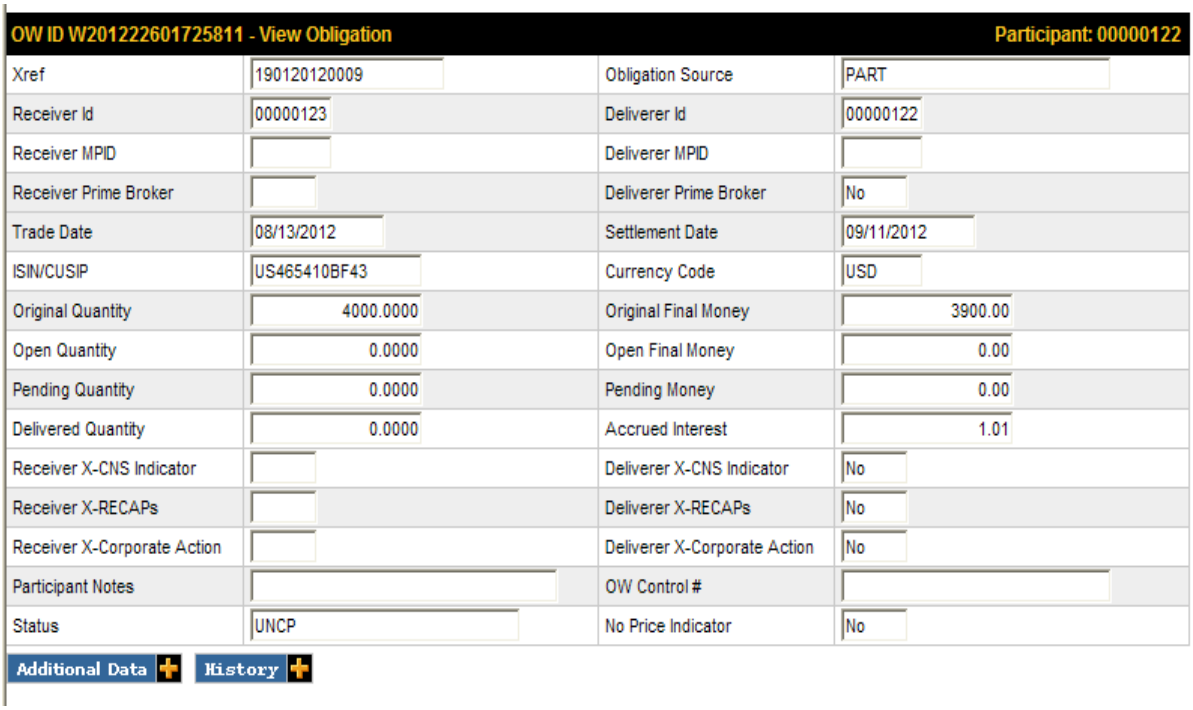

Figure 17.11.4 – View Obligation screen

17.11 Exception Stats Settlement

The Exceptions Stats Settlements screen is an effective way for Settlement Operations to monitor and address the obligations that require further settlement actions in the Obligation Warehouse system. It provides more details than on the Home page, Settlements tab. The information is organized in a table format categorized by contra to show the number of actionable items for each obligation status.

1. Select Obligation Management, Exception Stats Settlements from the Main Menu or click the quick link on the right side of the Home page.

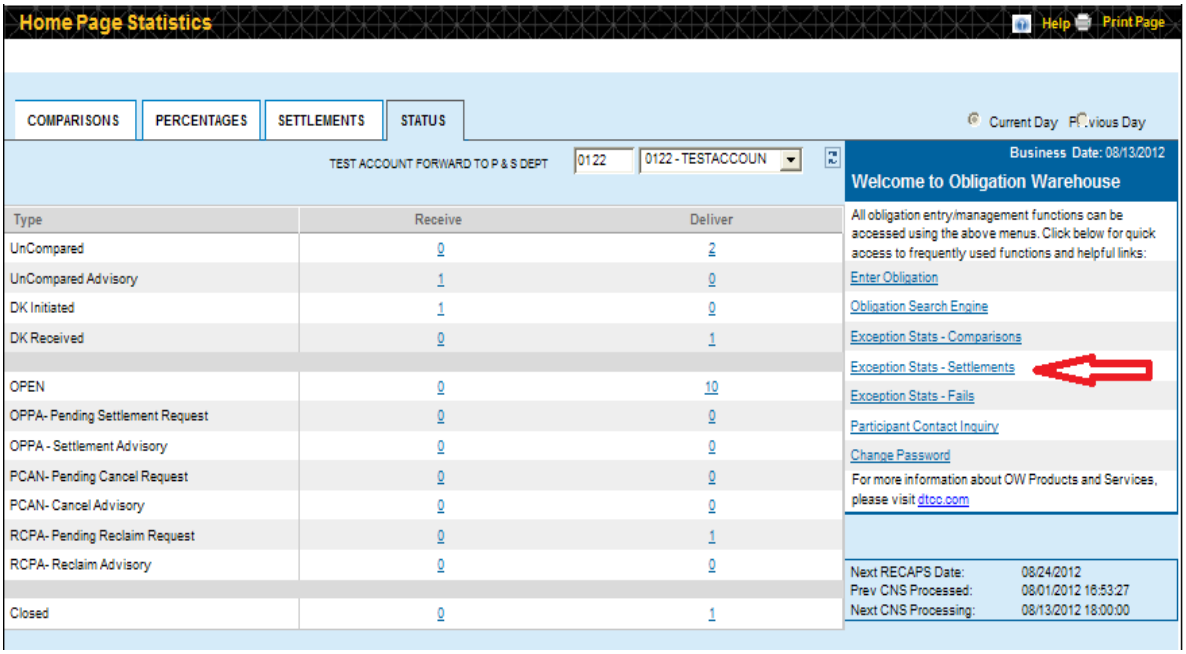

Figure 17.12.1 – Exception Stats- Settlements, Quick Link on Home page

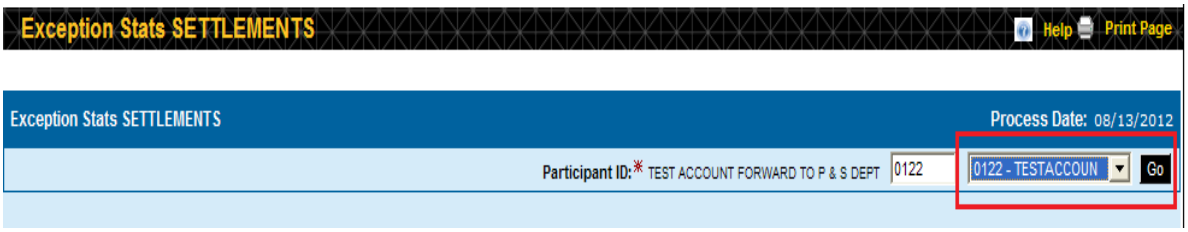

Figure 17.12.2 – Requesting the Exceptions Stats Settlements Page

2. Enter your NSCC Member number and click Go.

The two primary categories are Uncompared and Compared.

Uncompared:

- Pending Delivery – where your comparison request is coupled with the outstanding settlement information awaiting acceptance.
- Pending Delivery Advisory – the contra is requesting that you match their comparison request details and accept their settlement information on the obligation.
- DK Sent, Pending Delivery – you have initiated a comparison DK, however your request for acceptance of settlement information has also been sent to the contra.

- DK Received, Pending Delivery – you have received a comparison DK from the contra and your request for settlement information to be accepted is outstanding.

Compared:

- Pending Delivery – the obligation has compared and you have sent a request for settlement information to be posted and accepted by the contra. Action is required within 2 days or disincentive fees are imposed.
- Pending Delivery Advisory – the obligation has compared and you have received a request to post settlement information from the contra or accept the Delivery Notification. Action is required within 2 days or disincentive fees are imposed.
- Pending Cancel, Pending Delivery – your firm is requesting to cancel the compared obligation and your settlement information is awaiting acceptance by the contra. Action is required within 2 days or disincentive fees are imposed.
- Pending Cancel, Pending Delivery Advisory—you have received a request to cancel a compared obligation from the contra and accept the settlement information. Action is required within 2 days or disincentive fees are imposed.

- Pending Reclaim – your firm is requesting to re-open a previously closed obligation
- Pending Reclaim Advisory – the contra of a previously closed obligation is asking your firm to agree to re-open it.

3. Click any of the underlined numbers in blue to link to the related obligations that make up the item count shown on the Exceptions Stats Settlements screen for each contra. An Obligation Search Results screen is displayed and then further action can be taken on the individual obligations listed.

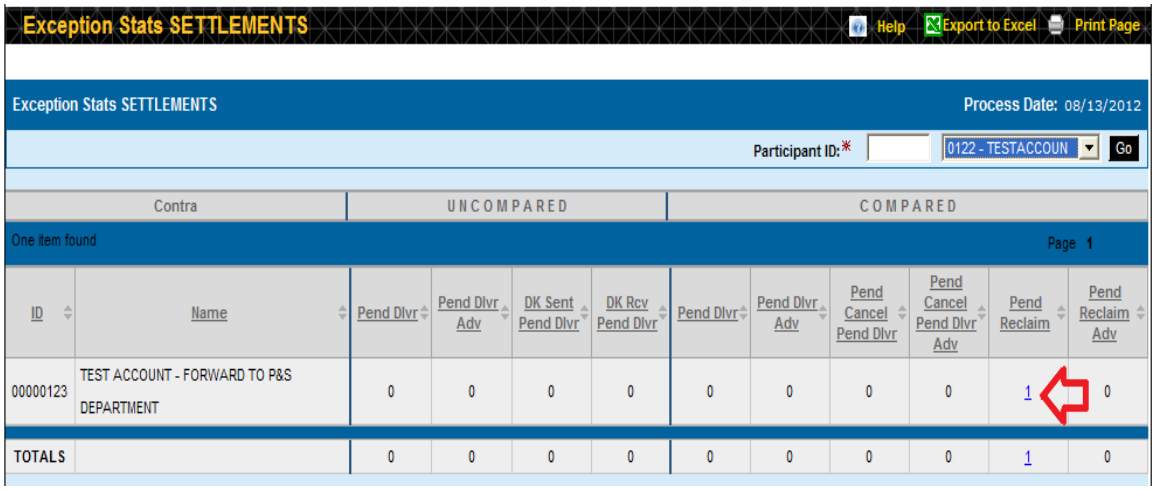

Figure 17.12.3 – Exception Stats Settlements page, by contra

4. Use the drop-down list to see the available further action on a specific obligation.

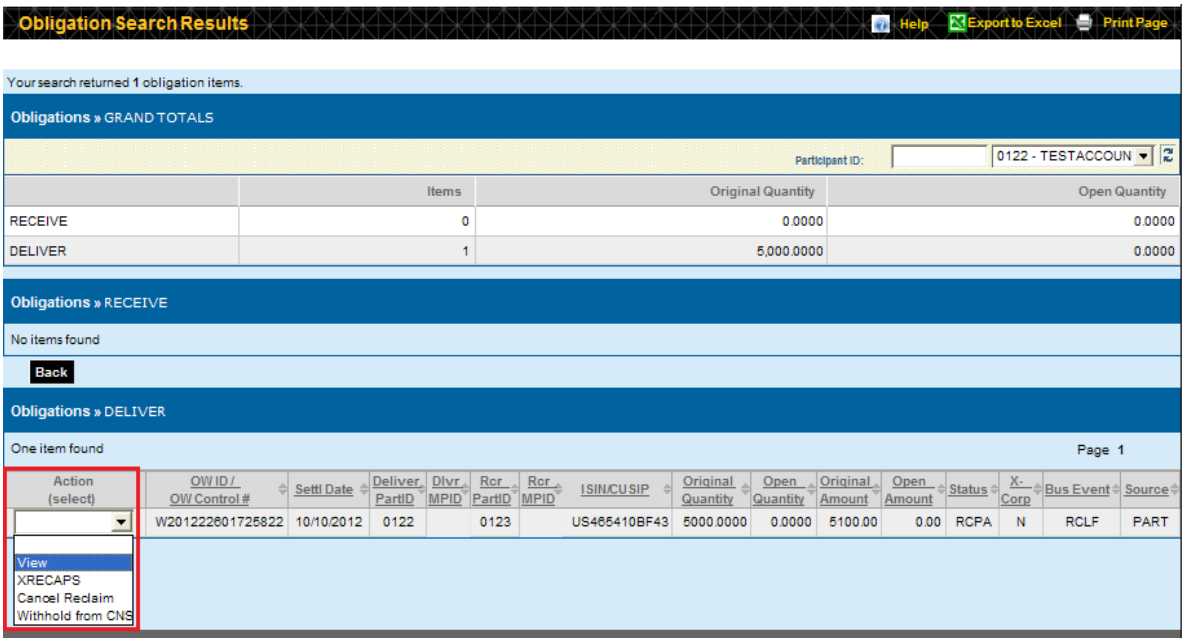

Figure 17.12.3 – Obligation Search Results screen, Action, View

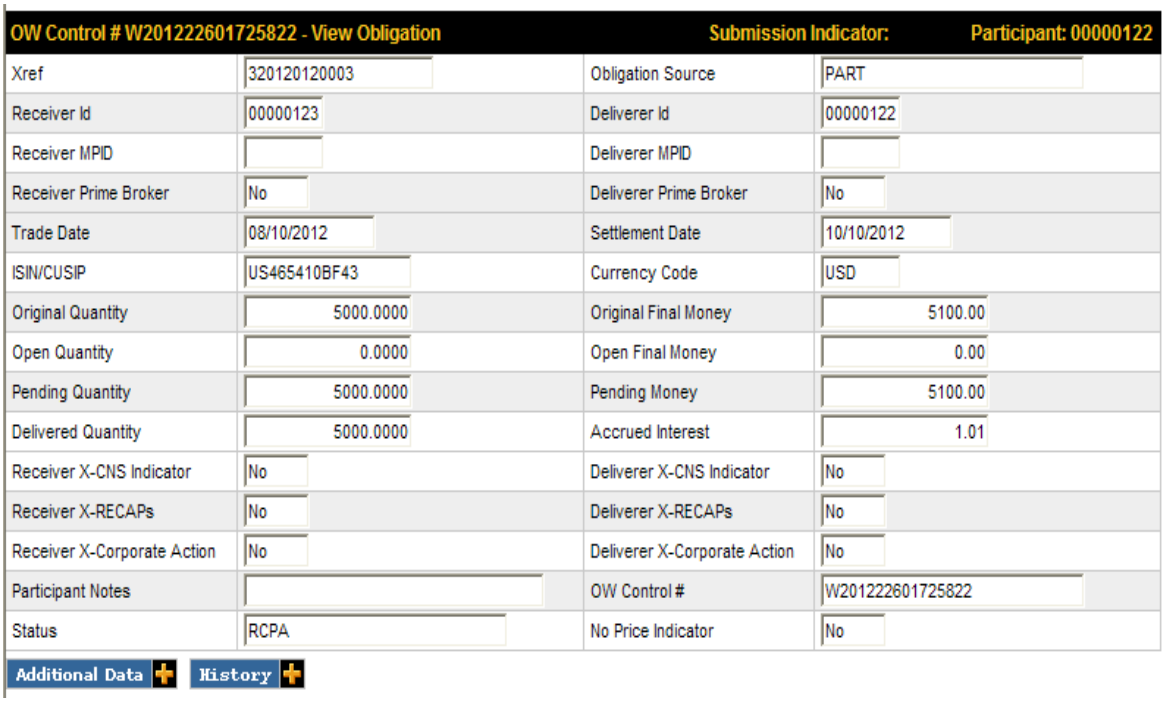

Figure 17.12.4 – Obligation View screen

17.12 Rejects

All obligation entries to Obligation Warehouse that rejected whether input through interactive messaging or from the web can be accessed from the View Rejects tab on the main menu. Rejected records will be available on the day of occurrence.

1. Select Obligation Management, View Rejects from the main menu. The View Rejects screen is displayed.

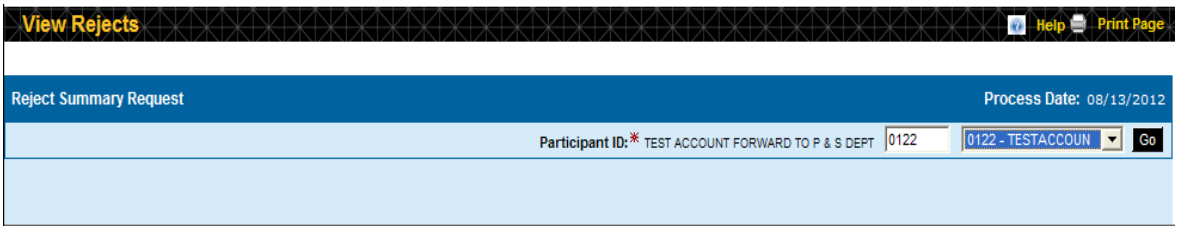

Figure 17.13.1 – Home page, main menu, View Rejects

2. Click an entry to display a full list of reject reasons with detailed explanations. (one entry can have multiple reject reason codes.)
3. To view the details submitted to Obligation Warehouse, click the Submission ID

17.13 Actions—View

View displays the most current version of the obligation. The View function also offers a detailed look at the obligation, including all tracking IDs, history.

Use the View Action to display the obligation details for a specific transaction. Obligation details cannot be modified and further Actions cannot be initiated using this feature, which is strictly for viewing purposes. View also offers two additional screens, Additional Data and Obligation History that provide a more detailed look at a transaction, including all tracking IDs, submission and comparison dates, and a list of related events, those initiated by participants as well as the Obligation Warehouse Web system (i.e. Modify, Cancel, Affirm, Match, Mandatory Reorg., and RECAPS).

1. Display the Obligation Search Results screen for the obligation you want to view, either directly from a link on the home page, from a Main Menu function, or through an obligation search. In the following figure, the Obligation Search Engine is used to access the obligation.
2. Click the Action drop-down list on the left that corresponds to the obligation you want to review. Select View, and the view obligation details.

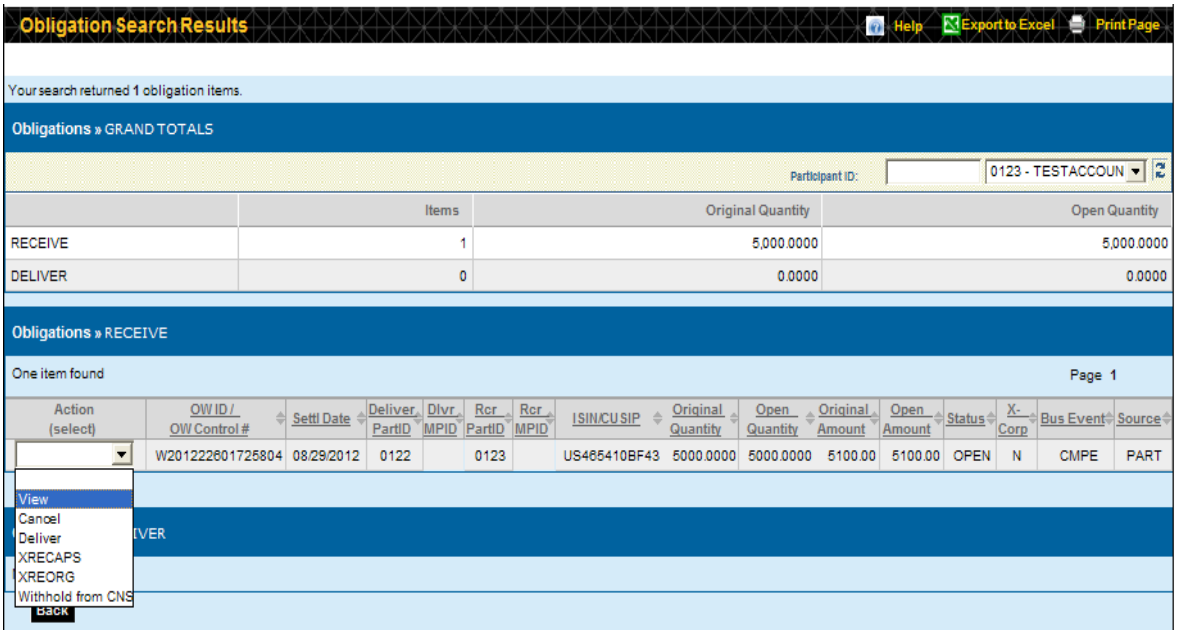

Figure 17.14.1 – Obligation Search Results screen, Action, View

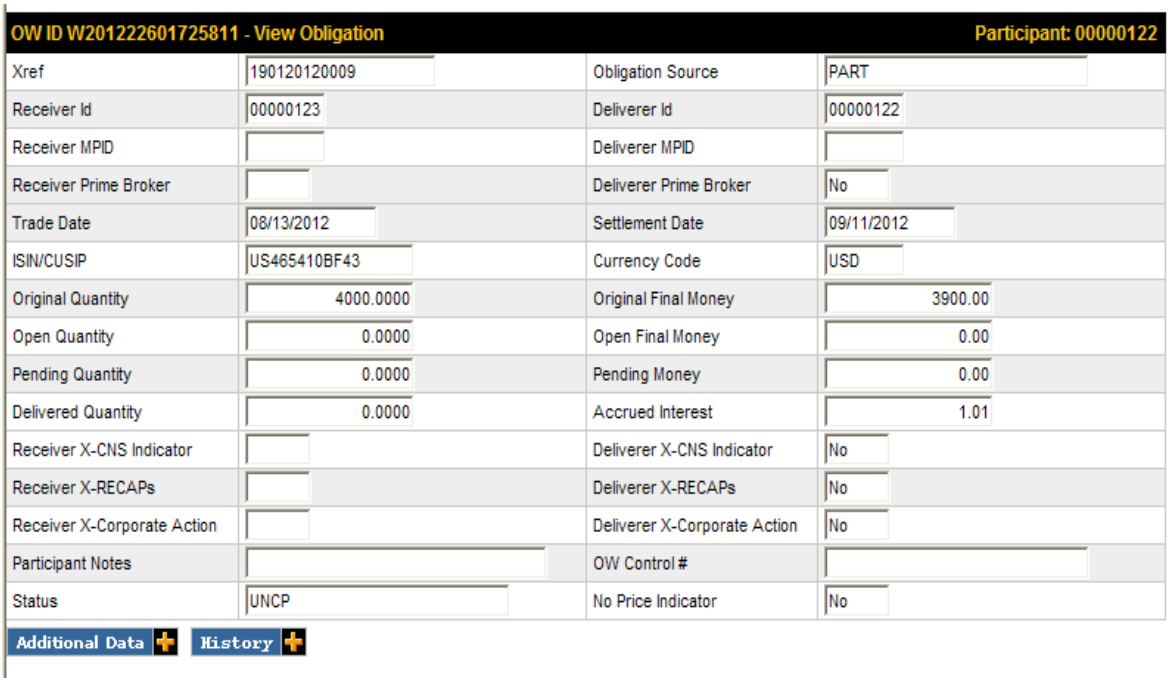

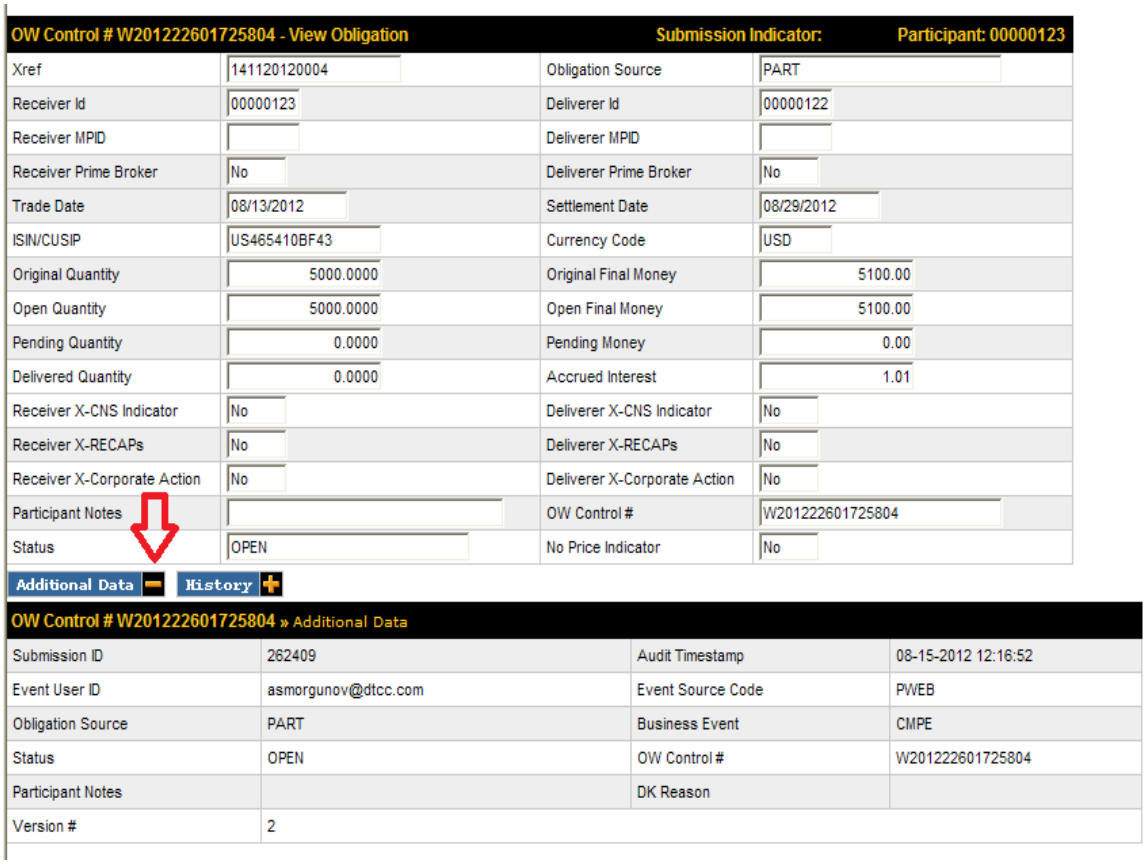

Figure 17.14.2 – View Obligation

3. Click the Additional Data button or the Obligation History button to access more details regarding the obligation being viewed.

Figure 17.14.4 – Obligation Search Results screen, View, History

17.14 Actions—Affirm

17.14.1 Affirm of Comparison Request

An Affirm eliminates the need to manually populate an obligation entry screen for your side of the obligation. In just a few keystrokes you can Affirm a Comparison Advisory, declaring that you agree with the obligation entry details submitted by the contra, and automatically generate your offsetting entry to become matched as an obligation in OPEN status.

1. Display your outstanding Comparison Advisories, either directly from the quick link in the home page, through an Obligation Search, or from the Exception Stats screen.

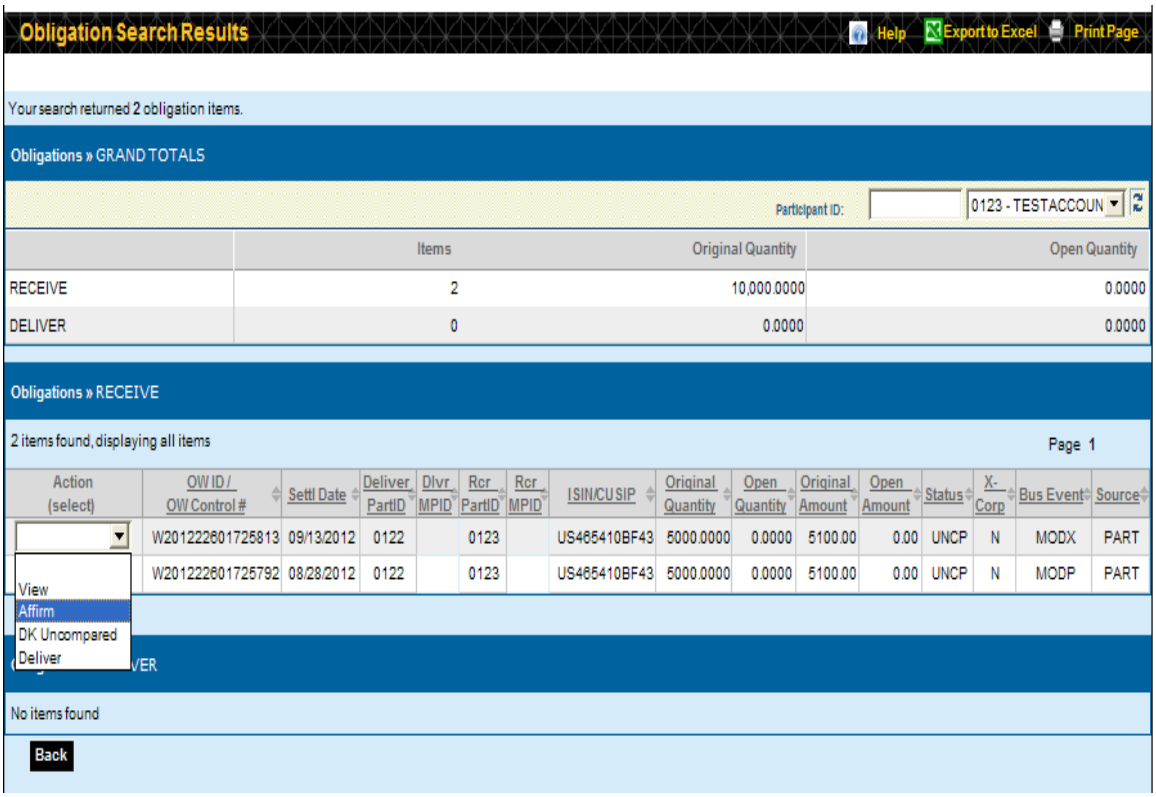

Figure 17.15.1 – Displaying Advisory information

Displaying Advisories

Although the Obligation Search Results screen in was requested by Member # 123 Comparison Advisories are always displayed from the original submitter's perspective. For example, in the Comparison Advisories listed in Affirmation screen Member #122 will receive an obligation. If Member #122 selects View or DK from an Action drop-down list, the details of the Delivery item are displayed from the Member #123 perspective

However, if Member # 123 selects Affirm from the Action drop-down list, the Affirm screen is displayed with the Member #123 matching side of the obligation, (from the perspective that #123 is creating).

2. After the obligations are displayed, click the drop-down list in the Action box next to the Comparison Advisory being addressed, revealing the Action items. Select Affirm, and the Affirmation screen is displayed.

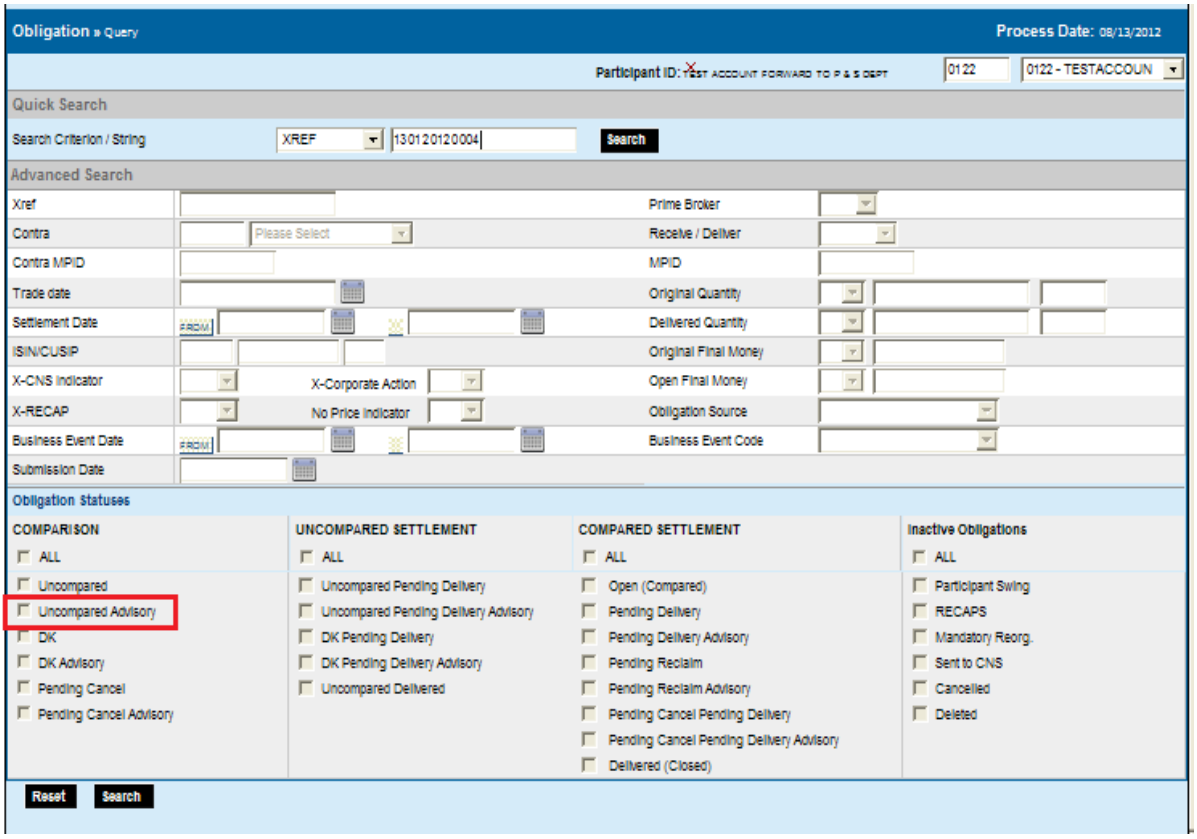

Figure 17.15.2 – Obligation Search Engine, Uncompared Advisory search

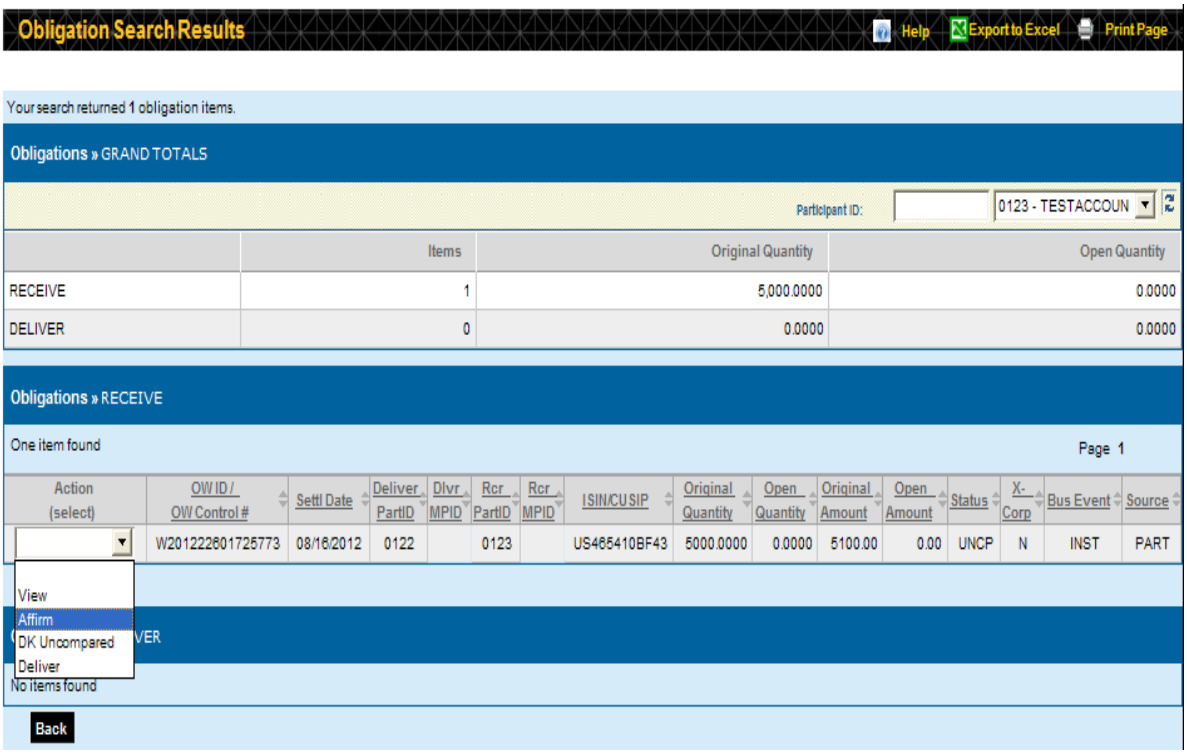

Figure 17.15.3 – Obligation Search Results screen, Affirm

3. The Affirm screen displays your matching side of the obligation, which is pre-populated with the details with exception of your Xref number.

In the provided Xref field, include your unique cross-reference number, which can be up to 16 alphanumeric characters. The Xref field cannot include any symbols and is case sensitive. Obligations from ACATS or NSCC Balance Orders will carry the ACATS control and sequence number and the Balance Order control numbers, respectively. Obligations entered from CNS Exits have a blank cross reference number in the Obligation Warehouse system.

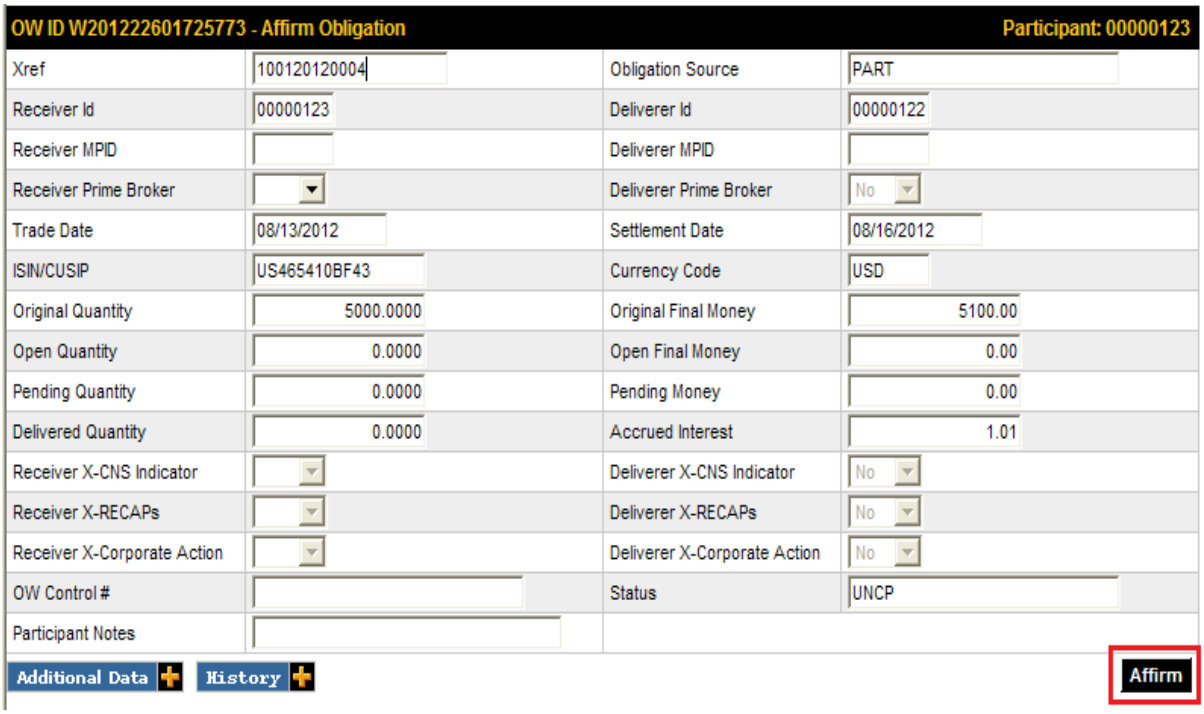

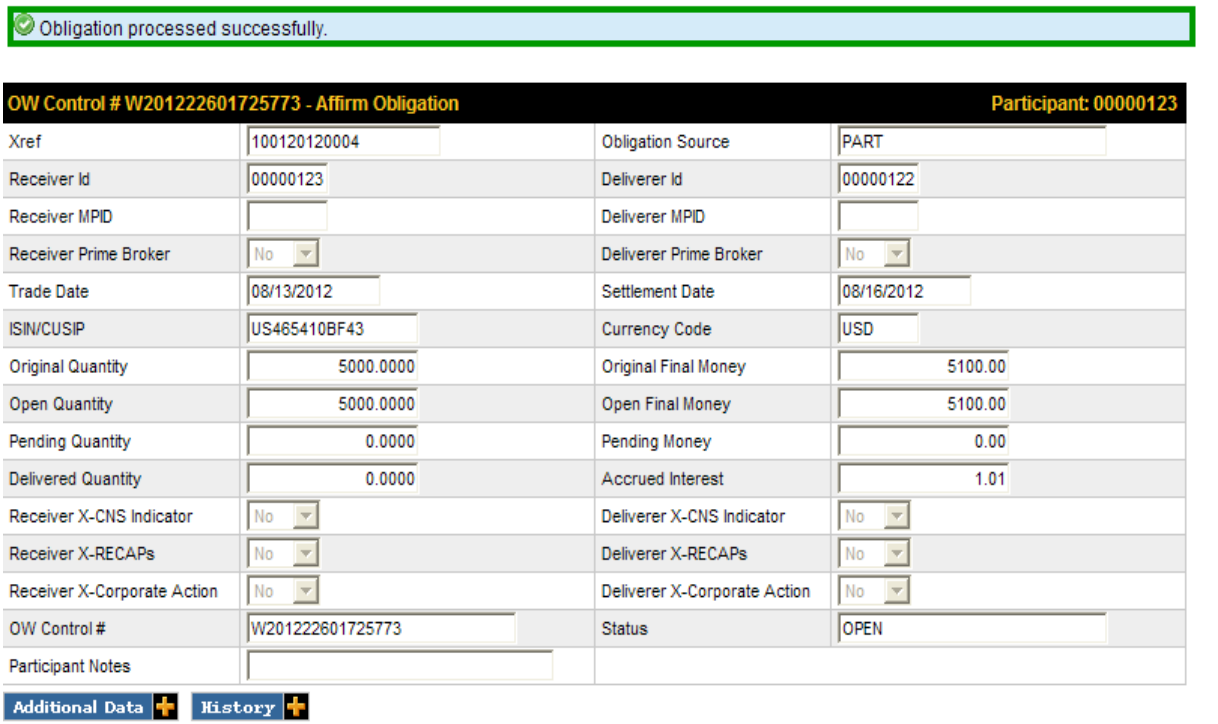

Figure 17.15.4 – Affirm Obligation screen, Affirm screen

4. Verify that all fields are correctly populated. Click Affirm button. When the submission is accepted your offsetting matched open obligation is generated with its OW Control Number.

Additional Data History

Figure 17.15.7 – Obligation processed successfully, Affirm Obligation, History

17.14.2 OPEN Obligation Status

When an obligation entry matches with the contra's submission for that obligation, the obligation is assigned an OW Control Number that will be key element in tracking the item. The OW Control Number may be used to look up the obligation on the Obligation Search Engine, communicate a delivery to DTC Settlement systems, or obligation settled away, and to cancel an obligation from the Obligation Warehouse, or used as the identifier of choice when discussing an obligation with your contra.

View a list of Open Obligations by clicking on the Open total items count shown on the Home page. Both the Receives or Delivery sides are listed.

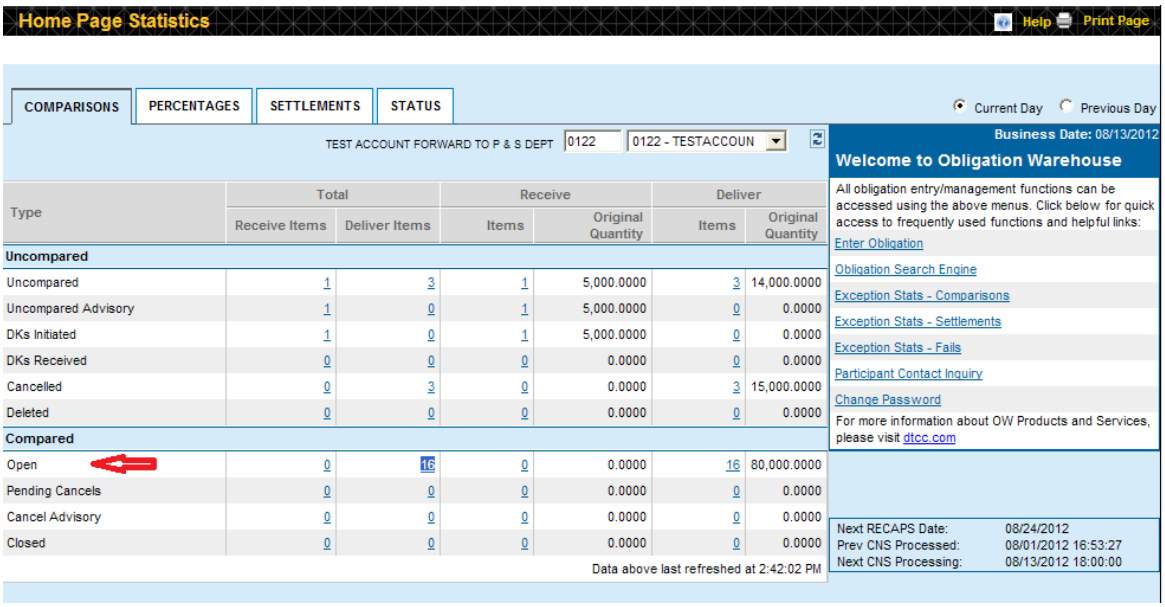

Figure 17.15.7 – Home page, Open

17.15 Actions—Modify

Use the Modify function to modify any detail of the obligation entry.

The Modify function is available on an Uncompared obligation where no deliveries have been posted to Obligation Warehouse for the obligation. Once a comparison has been completed on an obligation, modifications are only available on the cross-reference number for obligations if deliveries are not made. If a modification is necessary, cancel the submission and re-book the obligation with corrections for comparison.

1. Execute an Obligation Search or click a link on the home page to display the obligation you want to Modify.

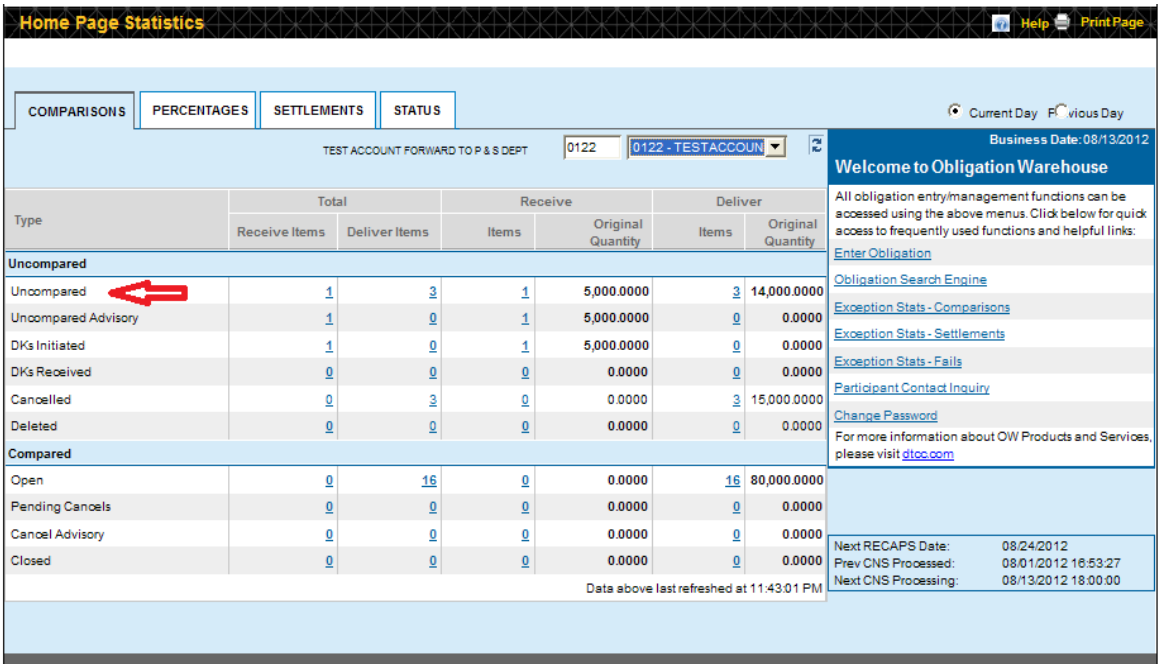

Figure 17.16.1 – Home page, Uncompared

2. Click the Action drop-down that corresponds to the obligation to be modified. Select Modify.

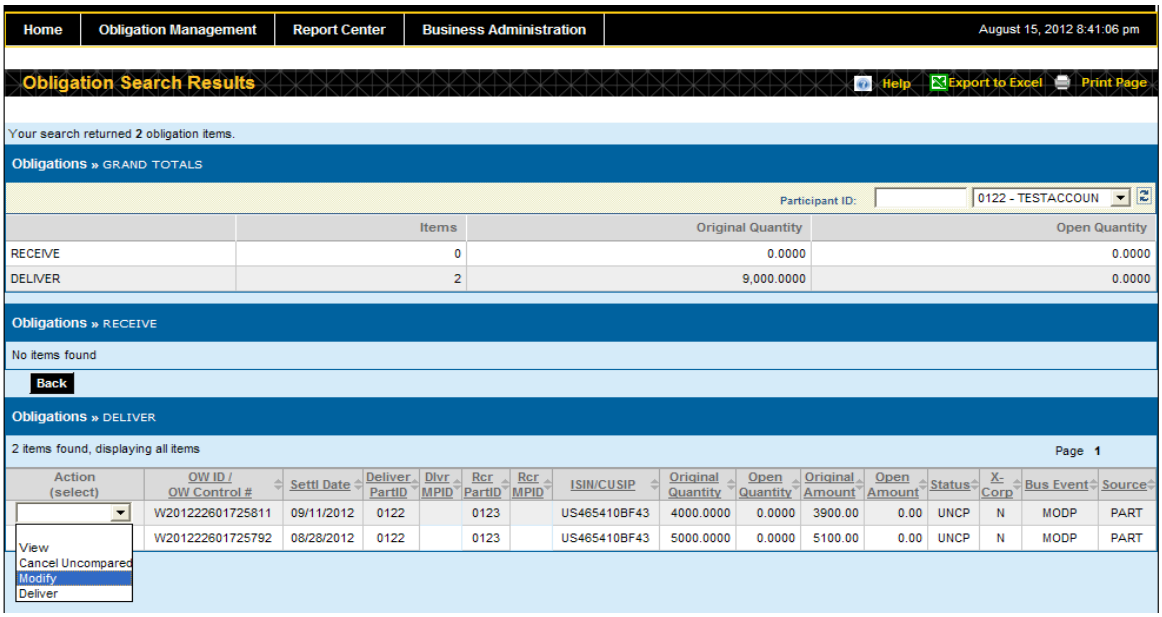

Figure 17.16.2 – Obligation Search Results screen, Actions, Modify

3. The Modify obligation screen is displayed. Make the changes. Obligation details that cannot be modified are displayed in gray.

4. When the changes are complete, click the Modify button.

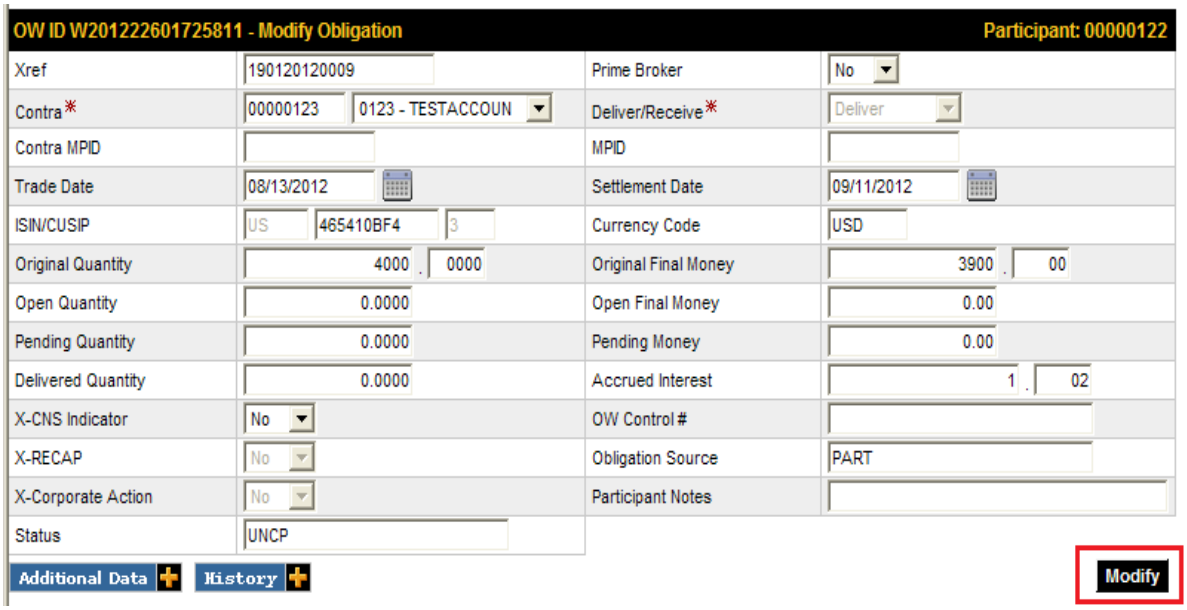

Figure 17.16.3 – Modify Obligation screen

5. The Modify Accepted is processed successfully.

17.16 Actions—DK of Comparison Request

If you cannot identify an obligation that has been submitted for comparison request, or if you disagree with the terms of an obligation, you have the option of responding with a DK (Don't Know). The DK will inform the original submitter that you don't know the obligation or disagree with the terms. Both parties are then aware of the condition and can take steps to correct or cancel the obligation entry.

The DK action is available against Comparison Advisories, Cancel Advisories or Delivery Notifications. Comparison DKs remain outstanding for the day of the DK plus four days before being marked for delete.

7. Click the DK Uncompared button, then confirm by selecting OK.

Figure 17.17.6 – Comparison DK Uncompared, pop up

8. The DK is accepted, and a DK initiated is reported on the home page Comparison tab. A DK Received is also displayed in the contra's home page Comparison tab.
9. Note that the DK you initiated is shown on the Home page statistics

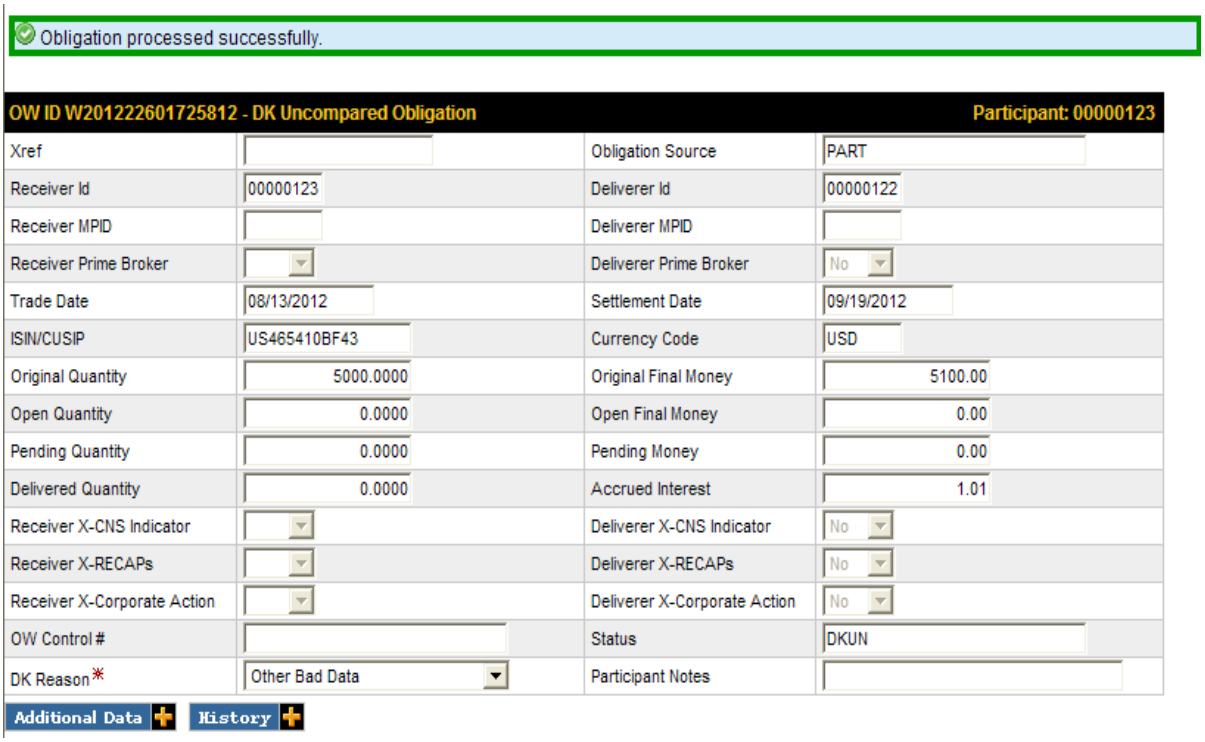

Figure 17.17.6 – DK'ed Successfully

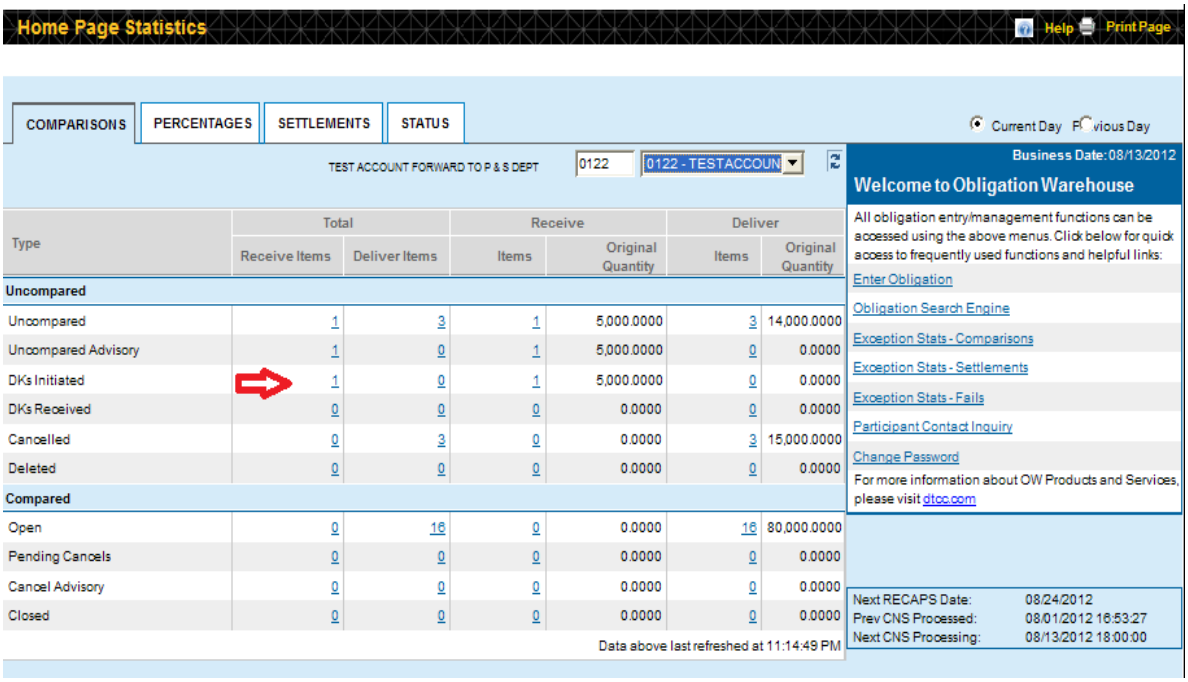

Figure 17.17.7 – Home page, Comparisons tab, DKs Initiated

DK sub state removed from an obligation

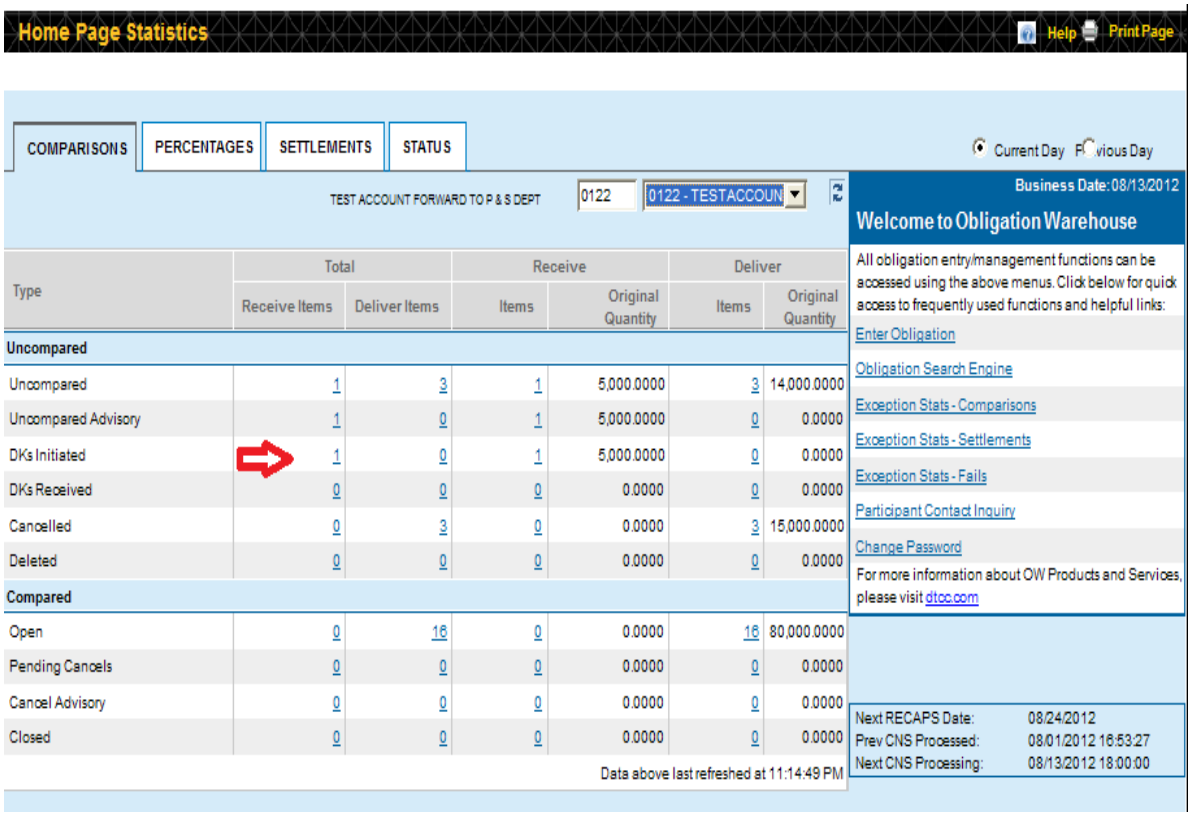

If a DK sub state is removed from an obligation, either through un-DK or Modify, a new Advisory is generated and the obligation is once again eligible for matching. To modify a DK'ed obligation, the original submitter must access the obligation through the Obligation Search Engine or from the DK Received link on the home page.

17.17 Actions—UnDK

The un-DK feature is to remove a DK that you previously marked. The DK can be lifted using the un-DK for up to 4 days past the DK action. At the end of the fifth day the unresolved DK will be marked for delete and prevented from further action.

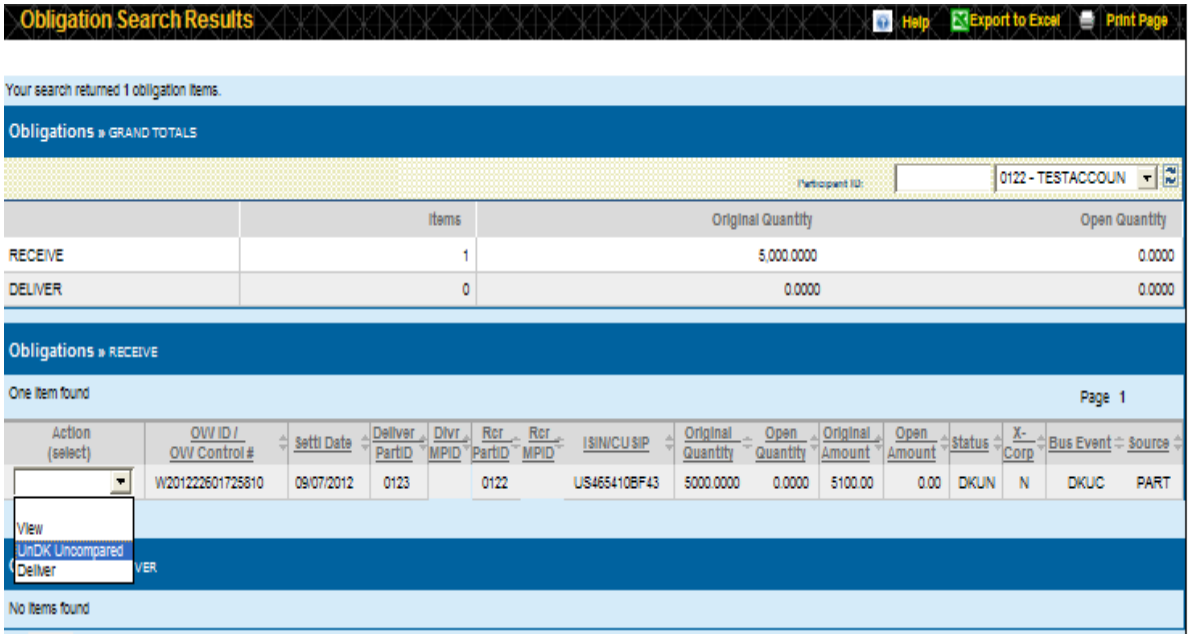

DKs are listed on the Home page as DKs Initiated or DKs Received. DKs Initiated are the DKs submitted by you in response to a contra's comparison request. DKs Received are your comparison requests that were DK'ed by the contra. If you mistakenly submit a DK against on a Comparison Request Advisory, you can remove the DK state provided that the obligation has not been modified, or canceled by the contra. Once the un-DK has occurred participants receiving MQ messages from Obligation Warehouse will get a screen replay of the un-DK and the home page will be updated in real-time.

1. Display your DKs Initiated, either from the quick link on the home page or through an Obligation Search.

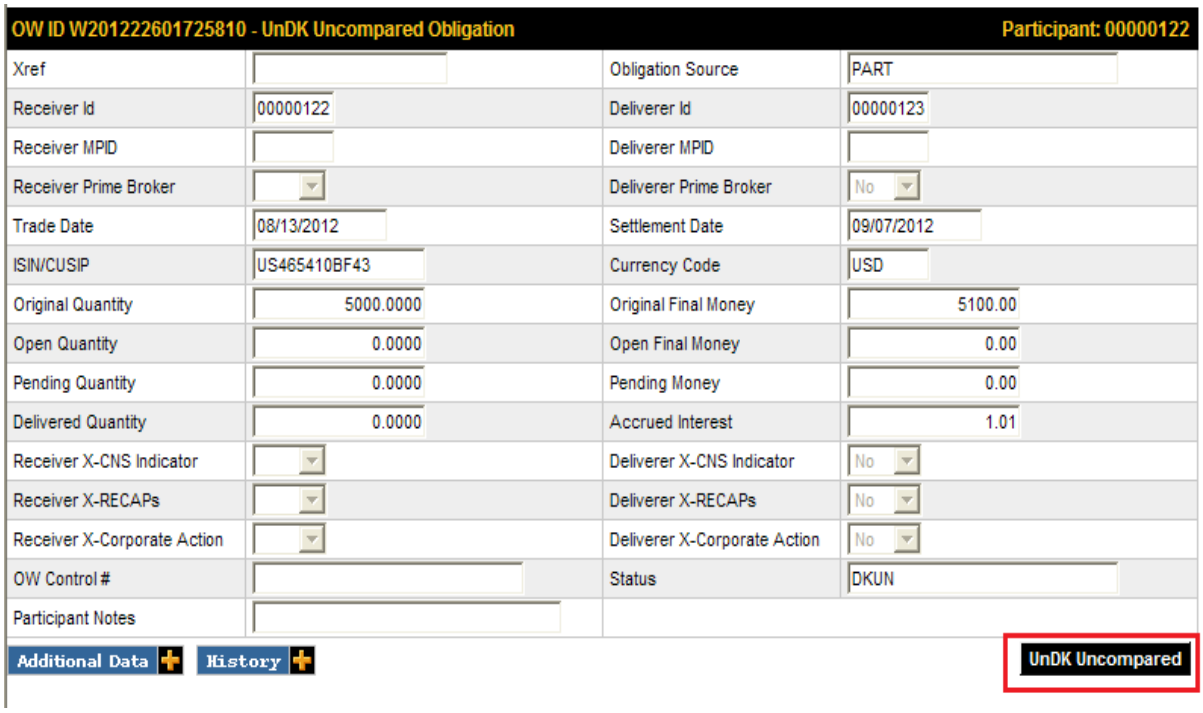

Type	Total		Receive		Deliver	
	Receive Items	Deliver Items	Items	Original Quantity	Items	Original Quantity
Uncompared						
Uncompared	1	3	1	5,000.0000	3	14,000.0000
Uncompared Advisory	1	0	1	5,000.0000	0	0.0000
DKs Initiated	1	0	1	5,000.0000	0	0.0000
DKs Received	0	0	0	0.0000	0	0.0000
Cancelled	0	3	0	0.0000	3	15,000.0000
Deleted	0	0	0	0.0000	0	0.0000
Compared						
Open	0	16	0	0.0000	16	80,000.0000
Pending Cancels	0	0	0	0.0000	0	0.0000
Cancel Advisory	0	0	0	0.0000	0	0.0000
Closed	0	0	0	0.0000	0	0.0000

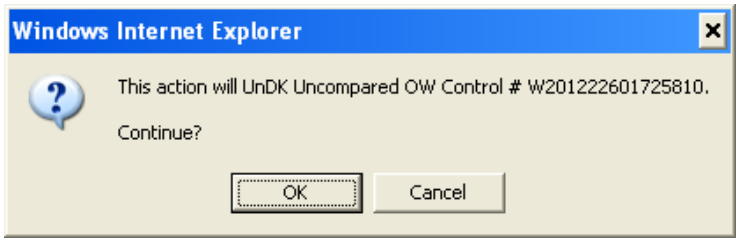

2. After the obligations are displayed, click the drop-down list next to the DK being addressed revealing the Action items. Select un-DK.

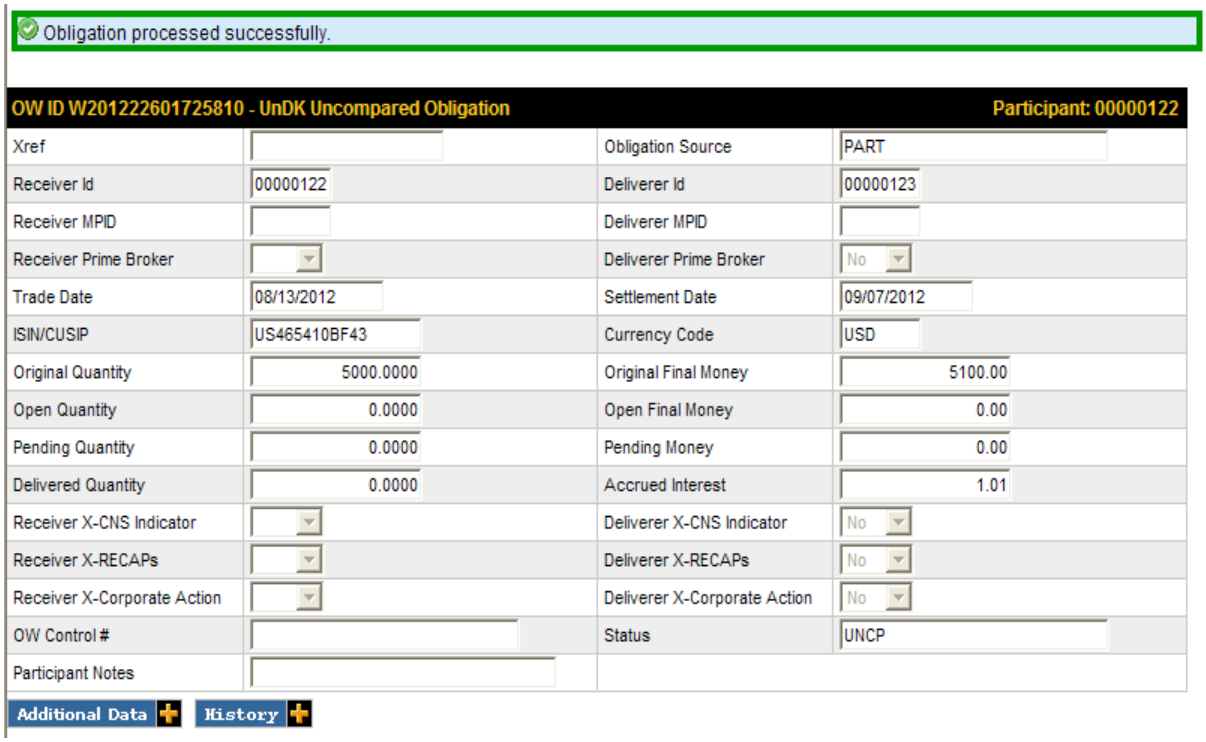

The un-DK screen is displayed with the original obligation details. The data cannot be modified.

3. Click **un-DK**.
4. Click **OK**, when the pop-up window appears to lift the DK, (Un-DK).

The Un-DK is accepted, and the DK Initiated is updated in the Obligation Warehouse system.

Un-DK only eligible to initiator

Only the DK initiator can submit an un-DK. Upon acceptance of an un-DK, the obligation is once again eligible for matching, and the original Advisory is displayed on the home page.

5. After the un-DK is accepted, the obligation is once again eligible for matching, and the Comparison Advisory is displayed on the Home page. At this point you can Affirm the Advisory or submit your own bilateral instructions to Obligation Warehouse for matching.

17.18 Actions—Cancel

Cancels are listed on the Home page, Comparison Tab as:

- Canceled; if Uncompared. Uncompared obligation entries can be immediately, unilaterally canceled by the submitter, until either the item is compared or marked for delete
- Pending Cancel, if submitted by you against an open obligation.
- Cancel Advisory are your open obligations where a Cancel has been initiated by your contra. Action is required within 2 days or disincentive fees are imposed.

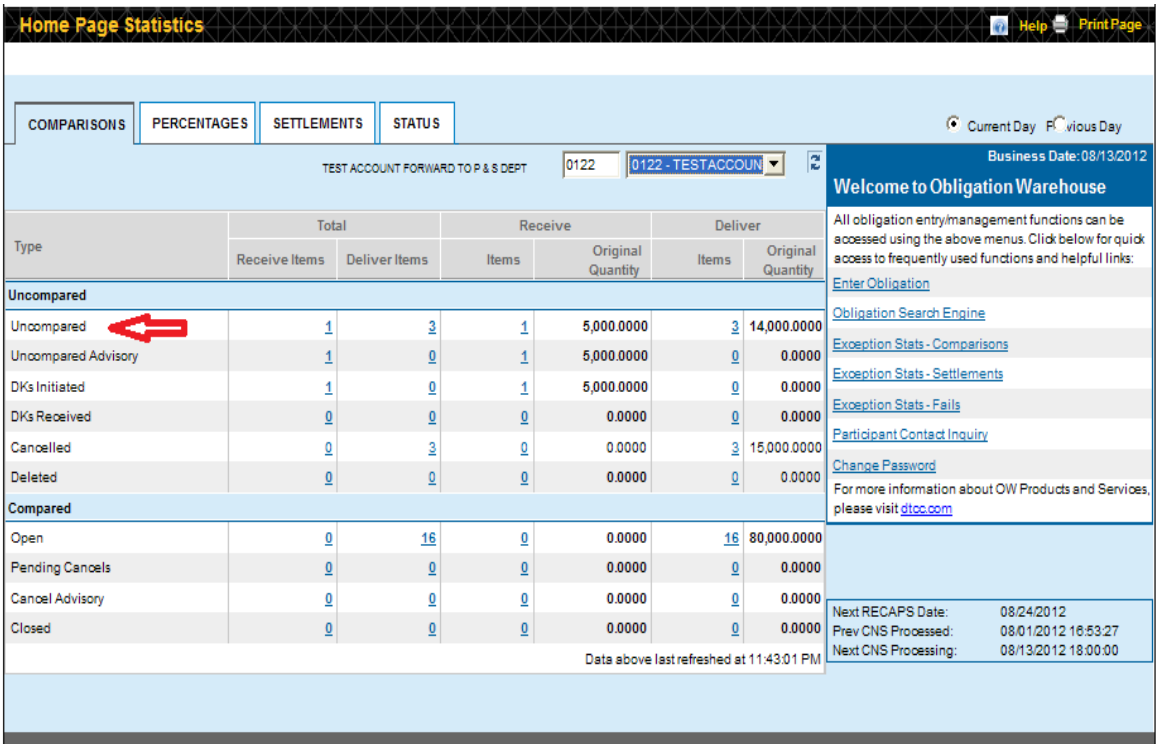

If you mistakenly submit a Cancel against an open obligation, you can remove the Pending Cancel sub state with an Un Cancel action.

Cancels are listed on the home page as:

- Canceled; if Uncompared.
- Pending Cancel, if initiated on an open obligation.
- Cancel Advisory are requests where a Cancel has been requested by your contra. Action is required within 2 days or disincentive fees are imposed.

17.18.1 Cancel of an Uncompared Obligation

1. Obligation entries that are Uncompared can be found by clicking on the link on the home page or use the Obligation Search Engine.

Un-Cancel only eligible to initiator

Only the initiator of the Cancel can submit an Un-Cancel. Upon acceptance of an Un-Cancel, the obligation is once again eligible for matching, and the original Uncompared or Open Obligation is displayed on the home page.

17.20 Actions—Bilateral Agreement of Delivery Made

- If the delivery was made outside of DTC Settlement, then bilateral agreement in the Obligation Warehouse system is necessary for the obligation to be updated with settlement information. Typically, the deliverer would enter the details about the delivery into Obligation Warehouse through messaging or the Obligation Warehouse Web. When the Delivery Notification Request is submitted in the Obligation Warehouse system, a Delivery Advisory is sent to the contra. The contra can then accept with the Delivery Advisory by selecting Accept on the Obligation Warehouse Web or submitting like details through interactive messaging which will match and the obligation will be updated.
- If the obligation was uncompared, the settlement information is updated regardless of whether it

was a full or partial delivery, with exception to Prime Broker.

- If the obligation was marked Prime Broker, uncompared and the delivery made.
    - When a partial delivery the settlement information is updated.
    - When the made deliveries have satisfied the anticipated values, then the obligation will be closed, due to delivery.
- On an open (matched) obligation when the delivery was full and the final money matched within the tolerance limits of $5 per million the obligation status will move to Closed, due to delivery.

It is also possible the contra may not agree with the Delivery Notification Request, so they can DK the Delivery Advisory using the drop-down action list. Also if the Delivery Notification Request Advisory is DK'ed in error, the contra can un-DK the Delivery Notification Request Advisory, (available on the day of the DK action only).

17.20.1 Delivery Notification Request

1. To create a Delivery Notification Request, locate the obligation you want to close by using the Obligation Search Engine. Define the Search Criteria and the Obligation Search Results screen will be returned.

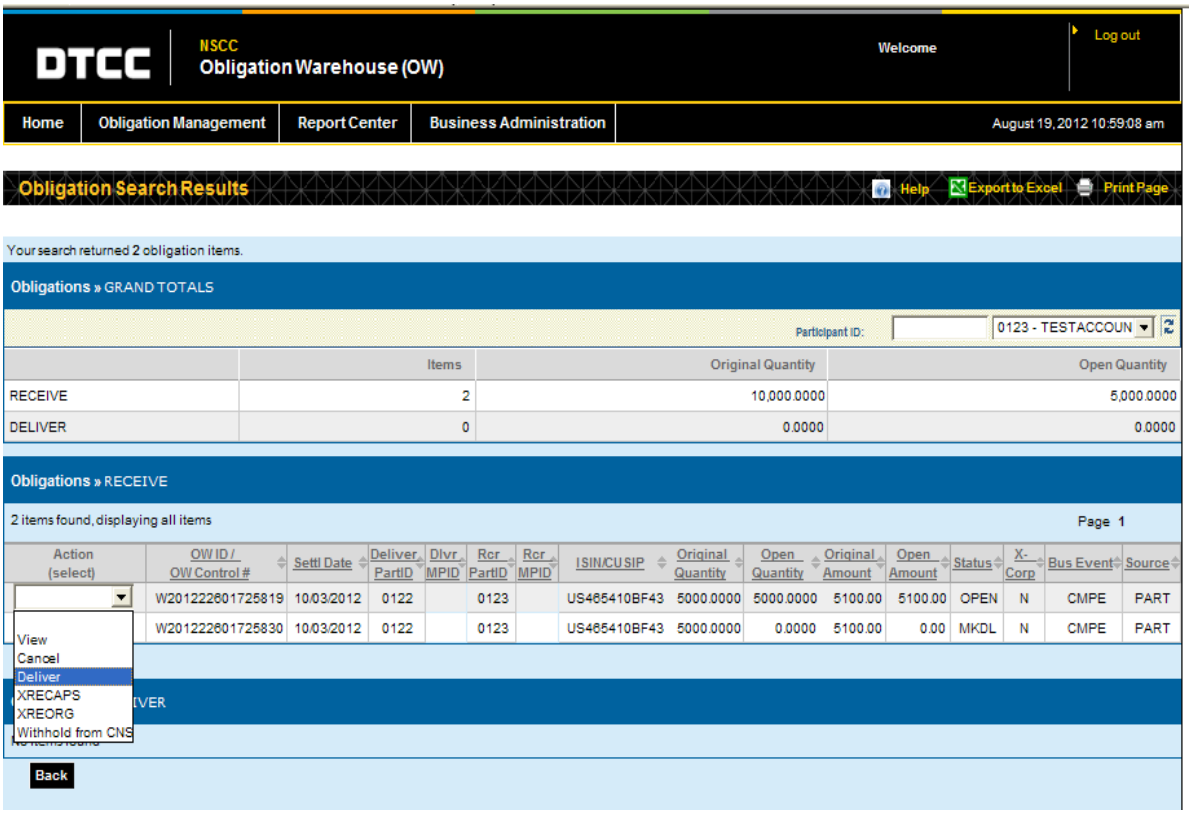

Figure 17.21.1 – Obligation Search Results screen, Action, Deliver

2. Select the appropriate obligation from the search results returned, using the drop-down list choose the action, Deliver. A pop-up screen will appear which must be populated with the delivery quantity and amounts that should appear on the Delivery Notification Request to be sent to the contra, whether partial or full delivery.

Additional Data History

Figure 17.21.18 – Cancel Delivery, Processed Successfully, History

17.21 Actions—Reclaim Notification Request

Obligation Warehouse allows for settlement information to be updated including the delivery and reclamation of a security whether originally exchanged through DTC Settlement or away. A reclaim is the DK of a delivery in the DTC Settlement system (IMS, ESS or NYW) or outside of the Clearing Corp.

If the OW ID or OW Control Number was submitted on the delivery order to DTC Settlement; then when the delivery is “Made” the information will be forwarded to Obligation Warehouse automatically. Contingent on the details of the obligation agreeing with the same details for that OW Control Number in the Obligation Warehouse system, the delivery information will be updated automatically. If the details for the OW Control Number in the Obligation Warehouse system do not match what was received from DTC Settlement, then a reject will be sent to the parties on the settlement message. If the receiver of the delivery disagrees with the settlement information, then the DTC Settlement system allows for a DK of the delivery (a.k.a. Reclaim).

If the delivery was made outside of DTC Settlement, then bilateral agreement in the Obligation Warehouse system is necessary for the obligation to be updated with settlement information; and the same is true of the reclaim. When the Reclaim Notification Request is submitted in the Obligation Warehouse system, a Reclaim Advisory is sent to the Contra. The contra can then accept with the Reclaim Advisory by selecting Accept on the Obligation Warehouse Web or submitting like details through interactive messaging which will match and the obligation will be re-opened if the reclaim was full and the final money matched within the tolerance limits of $5 per million.

- If the obligation was uncompared, the reclaim information is updated regardless of whether it was a full or partial delivery, with exception to Prime Broker.
- If the obligation was marked Prime Broker, uncompared and the reclaim made.

- When a partial reclaim, the settlement information is updated.
- When the reclaim is for the full final money amount, (resulting from either multiple partials or one full), the closed obligation can be re-opened to the original uncompared status.

- On a closed obligation when the reclaim was full and the final money matched within the tolerance limits of $5/ million the obligation's last status will be re-instated.

Note: Update of Obligation Warehouse information for settlement reclaim requests are only available for 2 days following the obligation closing, due to delivery.

If the recipient of the Reclaim Request Advisory does not agree with the request, then a DK of the reclaim using the drop-down action list would be the next step. If the Reclaim Notification Request Advisory is DK'ed in error, the contra can un-DK the reclaim Notification Request Advisory, (available on the day of the DK action only).

17.21.1 Reclaim Notification Request

Reclaim Notification Request can be submitted against previously closed obligations for up to two days past the close event.

1. To create a Reclaim Notification Request, locate the obligation using the Obligation Search Engine query tools. Define the Search Criteria and the Obligation Search Results screen will be returned.

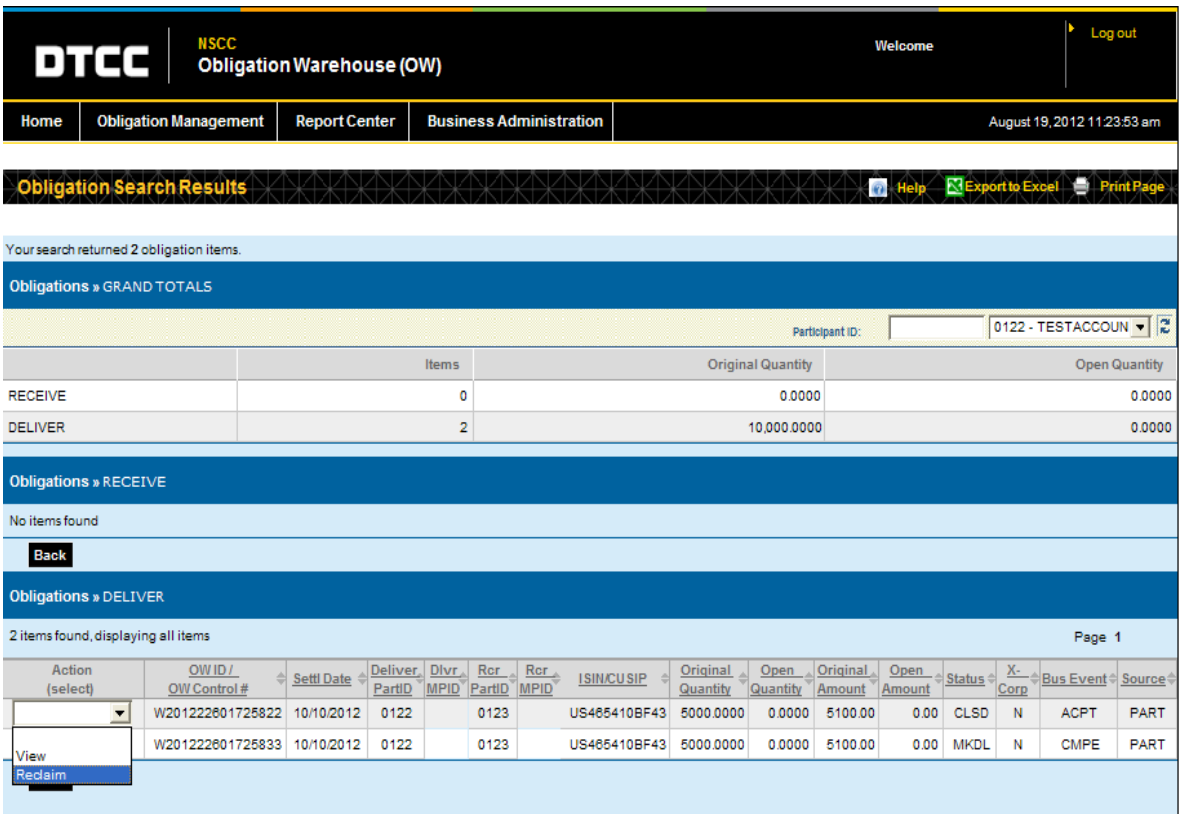

Figure 17.22.1 – Obligation Search Results screen, Action, Reclaim

2. Select the appropriate obligation from the search results returned, using the drop-down list choose the action, Reclaim. A pop-up screen will appear which must be populated with the delivery quantity and amounts that should appear on the Reclaim Notification Request to be sent to the contra, whether partial or full delivery.

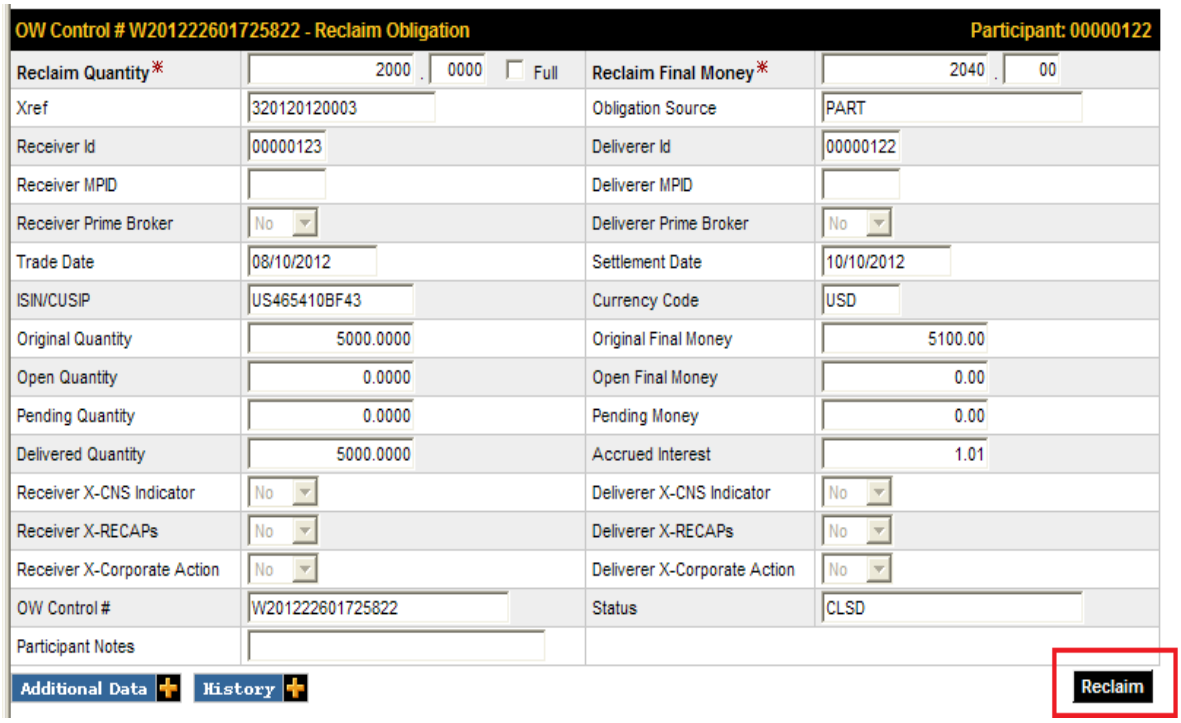

Figure 17.22.2 – Reclaim screen

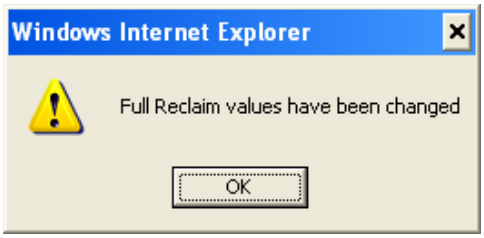

Figure 17.22.3 – Full Reclaim, warning screen

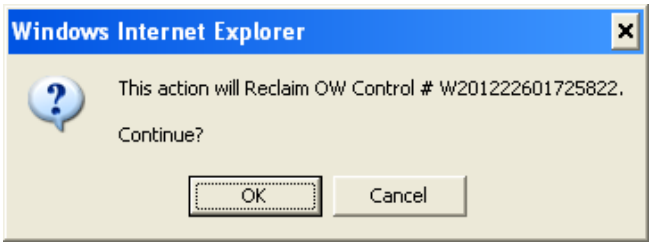

Figure 17.22.4 – Reclaim confirmation pop-up screen

3. Click the OK button to submit a Reclaim Notification Request Advisory to the contra. The screen will respond with a flag stating that Reclaim Notification Request Successful.

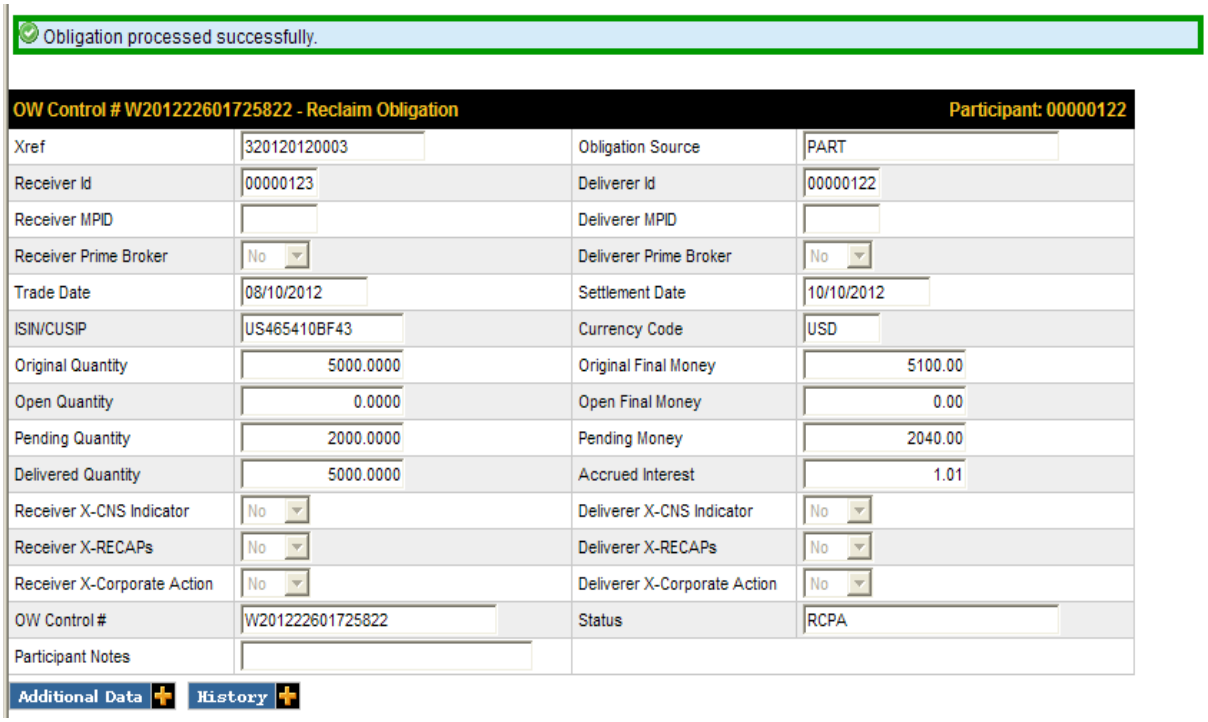

Figure 17.22.5 – Reclaim Notification Request successfully processed

4. The Reclaim Notification Request will appear on the Reclaim row of the Pending Acceptance section for the contra. Once the reclaim has been accepted by the contra, the home page, Settlements tab will reflect the change from Reclaim Pending Acceptance to last known status, such as Open.
5. The contra can then drill down on the Reclaim pending by clicking on the items, highlighted. The contra will use the Action drop-down list to select Accept Reclaim.

17.22 Actions—Exclusion Indicators

Situations occur whereby you need to prevent a compared obligation from being processed further by Obligation Warehouse. To accommodate the requirement, Obligation Warehouse has three types of exclusion indicators: X-CNS, X-REORG, X-RECAPS. Each exclusion indicator functions independently of the others and the deliverer and receiver only control their own side. The exclusion is activated is either party marks the exclusion indicator to yes.

When the need for the exclusion has subsided, then it can be removed using the function in the Action pull-down box in the Obligation Search Results.

17.22.1 Exclude from CNS Eligibility Check

17.22.5 Exclude from RECAPS

Effective upon implementation of the new release, the Exclude from RECAPS can be added at any point in the life of the obligation. The X-RECAPS indicator will not be changed until the Member removes it.

(Reset of the X-RECAPS to I-RECAPS immediately after the RECAPS process will cease with the implementation of the new release.)

Figure 17.23.18 – Include for RECAPS processed successfully

17.22.7 Include for Pair Offs

Pair off functionality on the Obligation Warehouse Web includes the choice of including or excluding any obligation from a pair off. The Obligation Search Engine provide query capability based on the Pair off Control number. The Obligation Warehouse Web Report Center has a report for Obligation Warehouse Pair Off Activity showing the details which create the pair off cash adjustment amounts being sent to DTC Settlement Code 22.

The Pair Off indicator field that signifies that an obligation is available to be included in the daily Pair Off process which occurs immediately after the CNS eligibility check at 17:00 ET. The Pair Off process is not performed on RECAPS day. The criteria for the underlying security of the obligations are listed in the Pair off Rules section of this Obligation Warehouse User Guide. The default value for the Pair Off indicator is NO. The user has the option of selecting YES to make the obligation available for the Pair Off process on an individual obligation basis after the initial submission.

The initial submission of an obligation does not display the Pair Off indicator.

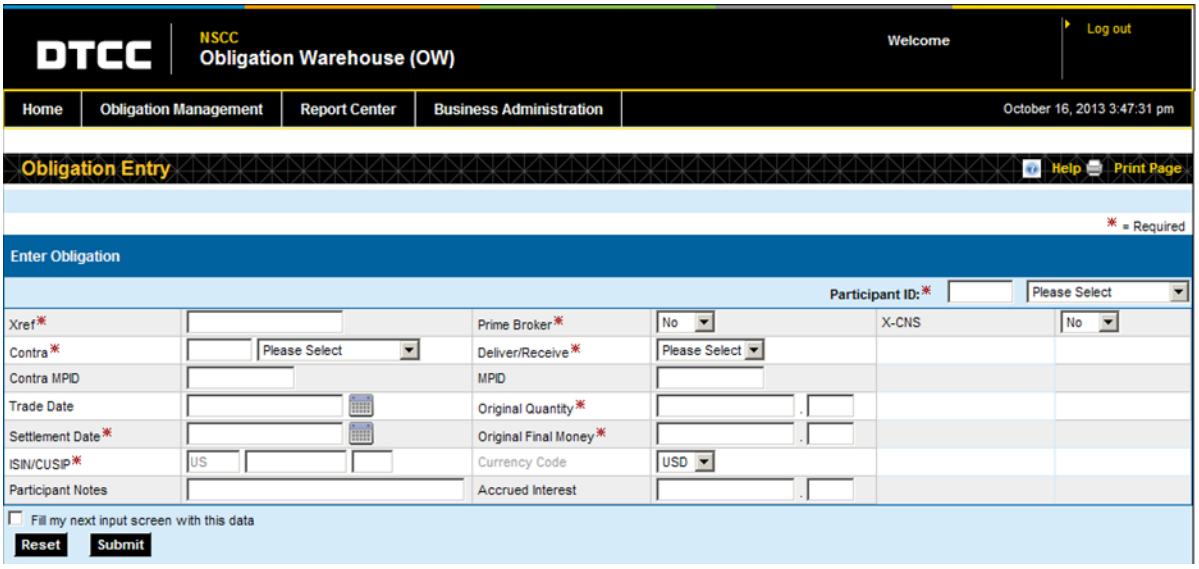

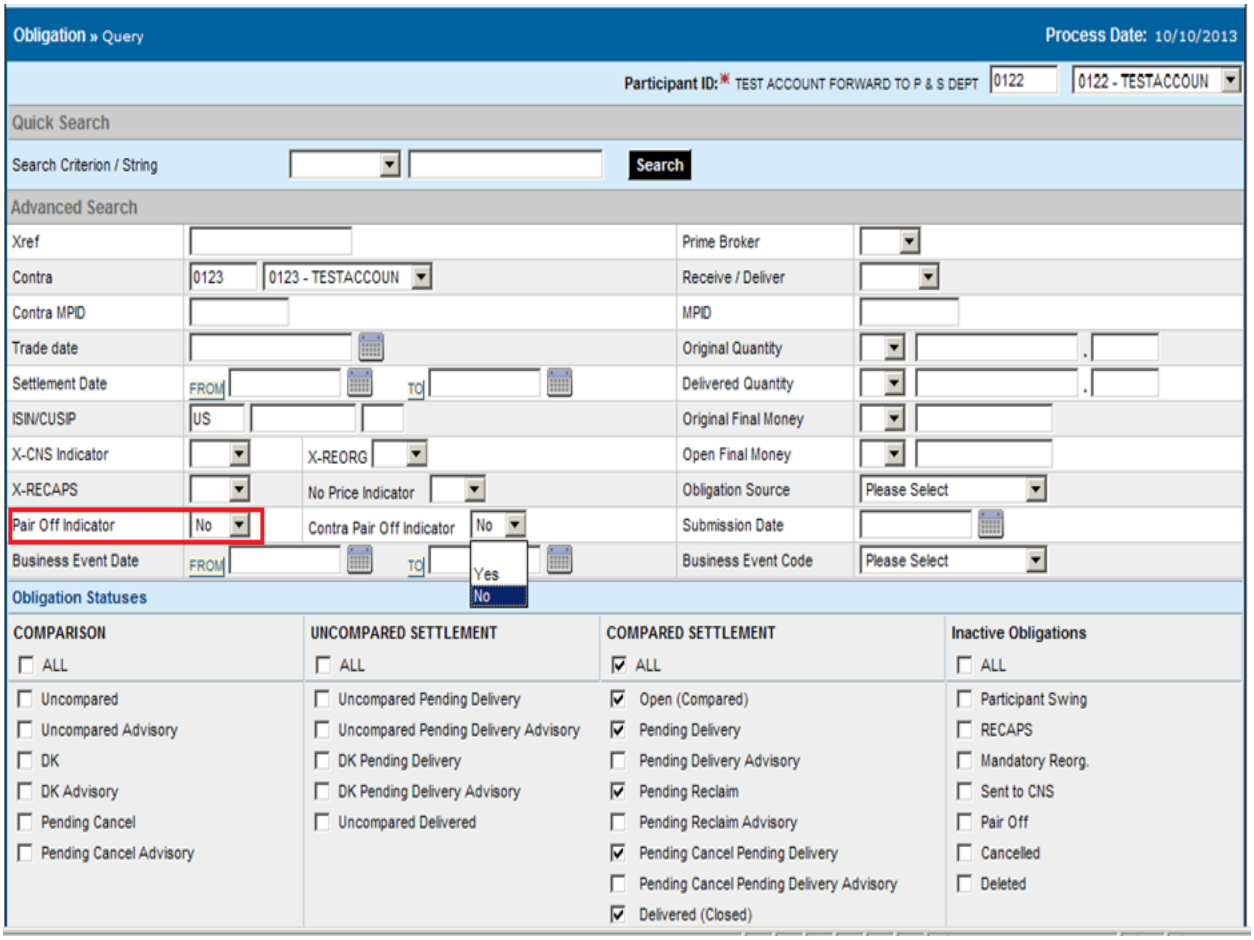

Figure 17.23.19 – Trade Entry screen

Search for the obligation entered using the Obligation Search Engine in the Obligation Warehouse system. Using the main menu bar at the top of the screen; select Obligation Search Engine. If you have the OW Control Number of the obligation; populate the field in the Advanced Search section of the screen. Select **Search**. If you have the OW Control Number of the obligation; populate the field in the Advance Search section of the screen.

Note the default value of NO is set for the Pair Off indicator on the obligation.

Figure 17.23.20 – Obligation Search Engine

To modify an obligation to change the Pair Off indicator from NO to YES, you need to identify the obligation using the Obligation Warehouse Web Obligation Search Engine. The obligation is returned in the Search Results screen. On the left of the screen is an Action selection pull-down menu box. Select the arrow and highlight “Include for Pair Off “ to modify the Pair off indicator.

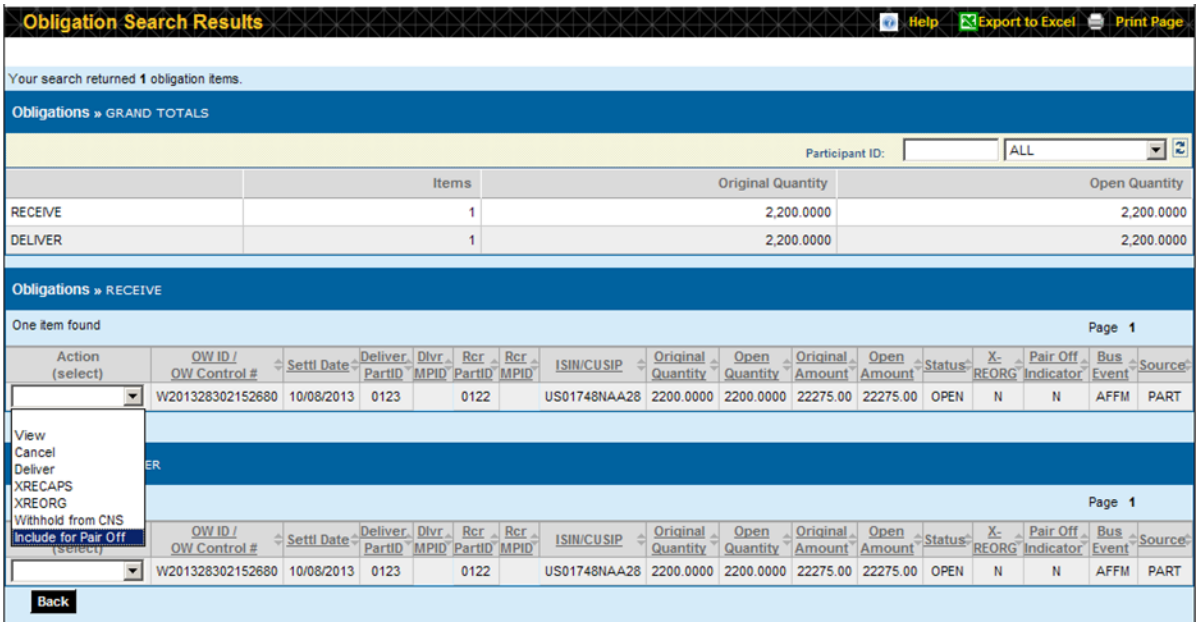

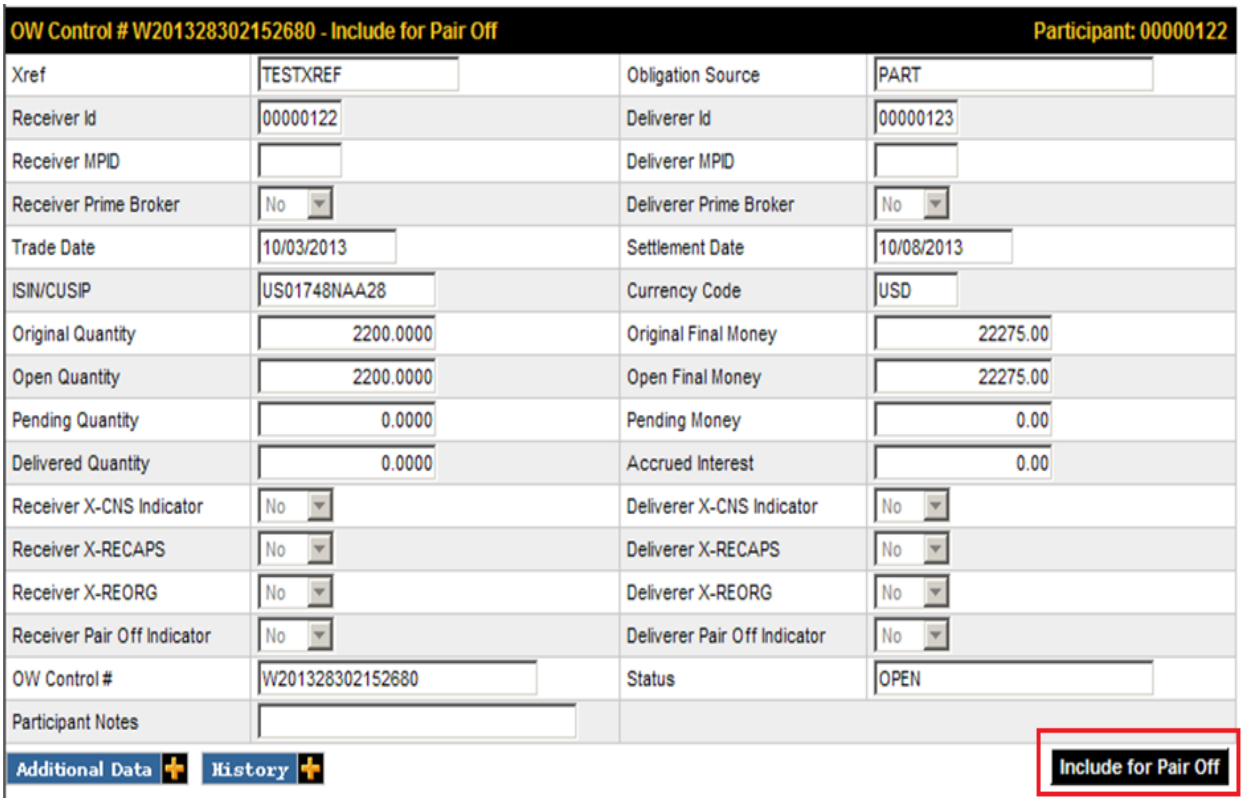

Figure 17.23.21 – Obligation Search Results

The drop down menu allows the change to “Include for Pair Off”, meaning to include in the process. Select the action of “Include for Pair Off.”

Click the Include for Pair Off button in the lower right corner at the bottom.

Figure 17.23.22 – Include for Pair off screen

Figure 17.23.23 – Include for Pair off pop-up screen

A pop-up box appears to ensure that the selection was not made in error. Select OK.

The real-time process returns a green banner at the top of the page. The banner has a positive response of Obligation processed successfully.

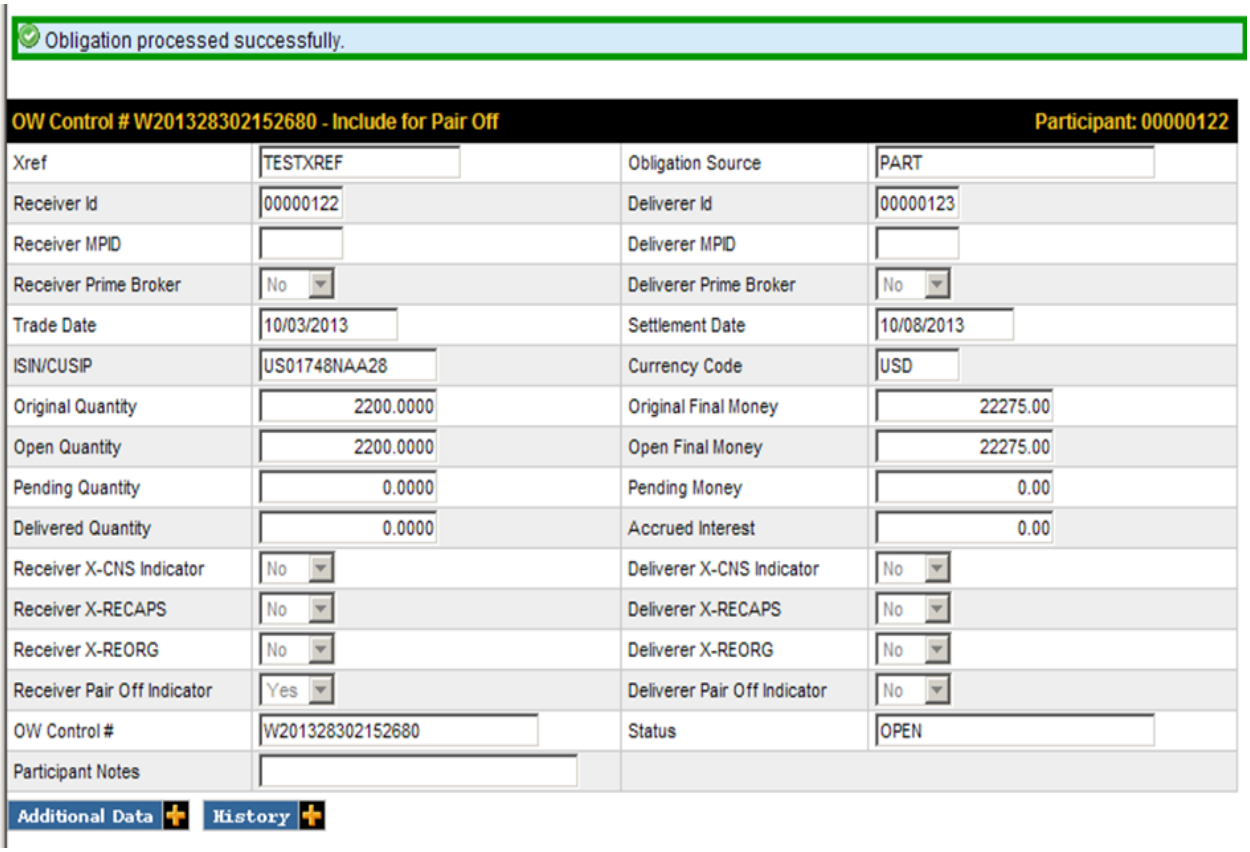

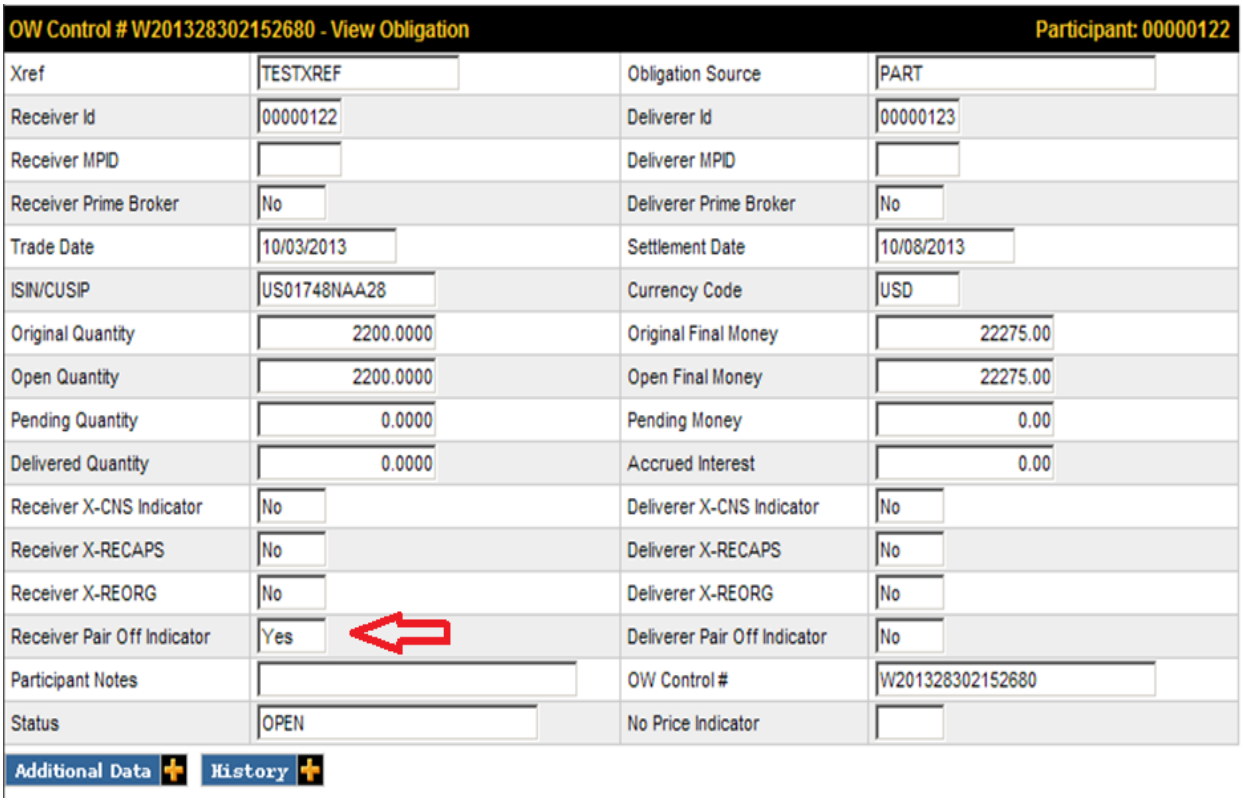

Figure 17.23.24 – Obligation processed successfully banner

Notice on the obligations detail screen that the Receiver's "Include for Pair Off" is now set to Yes.

To view the obligation and see the full details of the obligation. Use the Obligation Search Engine as you did in the steps above; and identify the OW Control Number of the specific obligation needed. Select Search. The Search Result screen is returned. Using the Actions pull-down menu; select View. The obligation will display with all the details.

Additional Data History

Figure 17.23.25 – Obligation View

The red arrow points to the Pair off indicator, not the value was changed from NO to YES.

In the next example, the user is submitting a query through Obligation Warehouse Web to find the obligations with a specific Contra, which were compared, where the Pair Off indicator is set to NO.

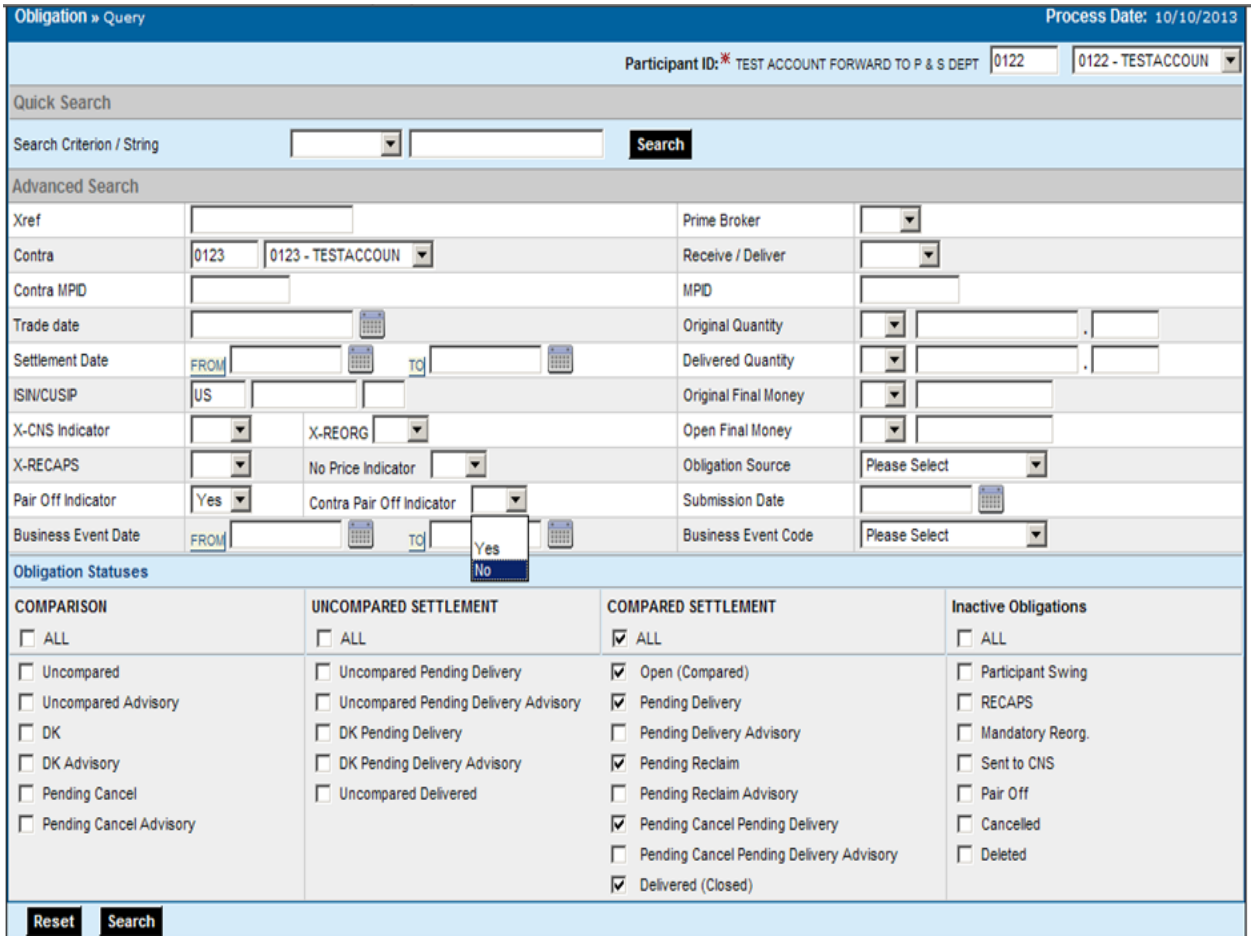

Figure 17.23.26 – Obligation Search Engine, Pair off selection

The results returned on the query can be viewed as a list. Identify the OPEN obligation you want to change to be included in the Pair Off process. Use the Action drop down menu and select “Include for Pair Off”.

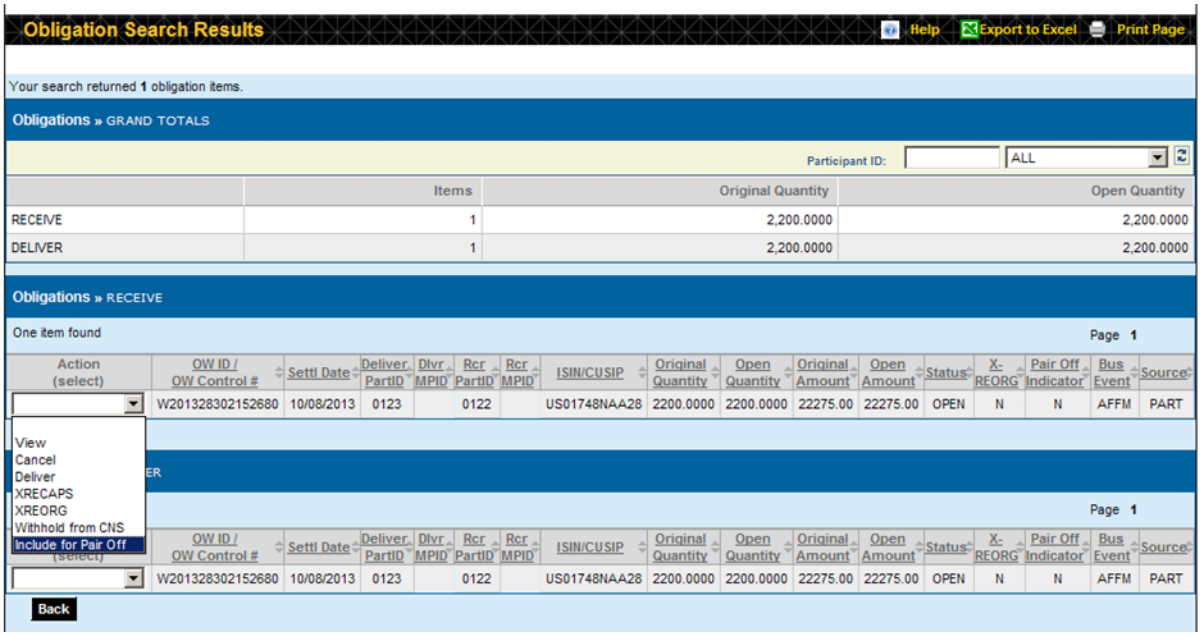

Figure 17.23.27 – Obligation Search Results, Action drop-down

The next screen is returned with all the obligation details, select “Include for Pair Off.”

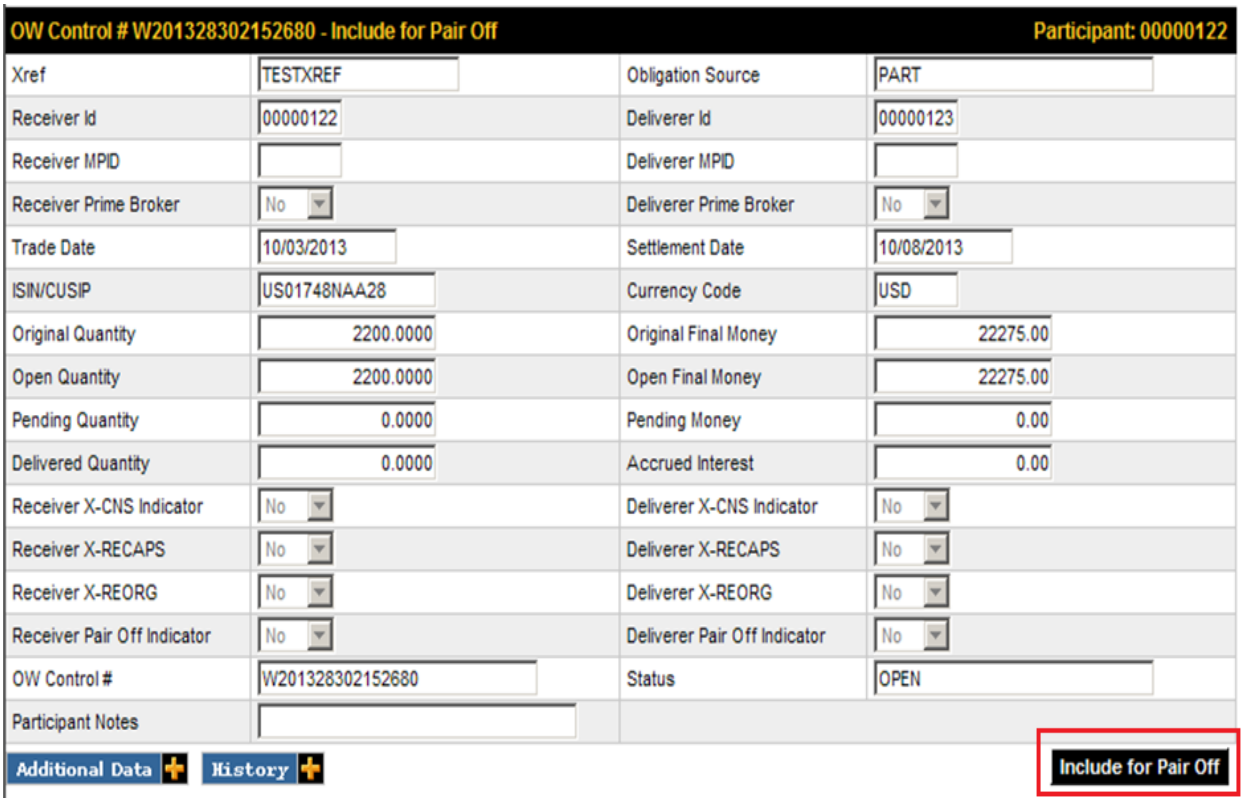

Figure 17.23.28 – Include for Pair off screen

A pop up box will appear next to ask for verification. Select OK.

Figure 17.23.29 – Include for Pair off pop-up screen

Upon entering the OK, a screen will display the obligation details with a green banner at the top stating “Obligation processed successfully.”

Sorting the obligations will allow you to identify contras that may not have the Pair Off indicators set to YES so a pair off can be executed. Once the obligations are identified the Member can then contact the Contra and request a modification of the Pair Off indicator to YES.

17.23 Obligation Warehouse Web Report Center

The Obligation Warehouse Web Report Center includes the Obligation Warehouse reports as of the initial day of operation. A report remains available for access for years and can be accessed whenever the Obligation Warehouse Web is open. Reports are in portable document format (pdf), and can be easily viewed, printed, or exported to Excel.

The breakdown of the Obligation Warehouse End of Day Position MRO (AutoRoute ID 02050703) is available on Obligation Warehouse Web Report Center. Each report will be identified with the time it was produced then the name, (For example; Intraday Obligation Warehouse Position –Uncompared).

Below is the name break down of available reports.

Obligation Warehouse Report Name on Obligation Warehouse Web Report Center	Statuses Included on Each Report
Uncompared	UNC, UNPA, DKPA, DKUN
OPEN	OPEN status only
Pending	OPPA, PCPA, PCAN, RCPA
Closed	CLSD, MKDL, CANC
RECAPS	OPEN & CLSD due to RECAPS (only on RECAPS day)
REORG	OPEN & CLSD due to REORG (only on event day of REORG.)
Pair off Activity Report	OPEN & CLSD due to Pair off (only on event day of Pair off.)

The Obligation Warehouse Cash Reorg. MRO (AutoRoute ID 02051658) will be available as a file in Obligation Warehouse Web Report Center. It specifies cash information on obligations where a mandatory reorganization event occurred.

1. Select Report Center from Main Menu.

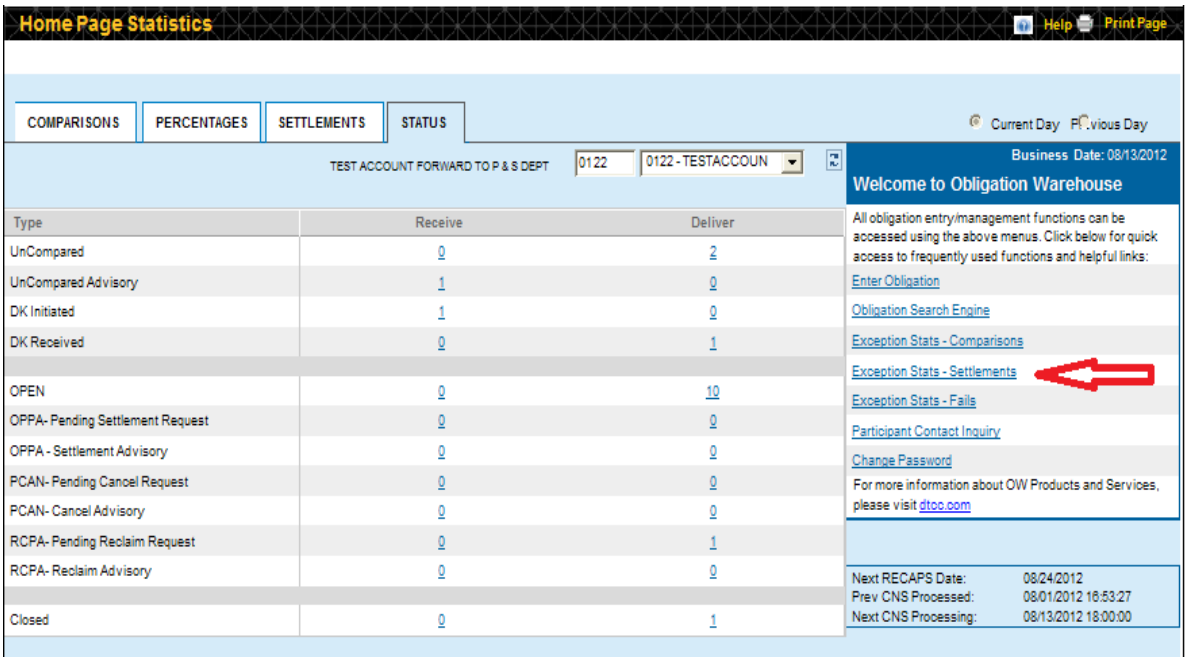

Figure 17.24.1 – Home page, Access to the Report Center

2. A new window is opened with the product choice of Obligation Warehouse, highlight and click it.

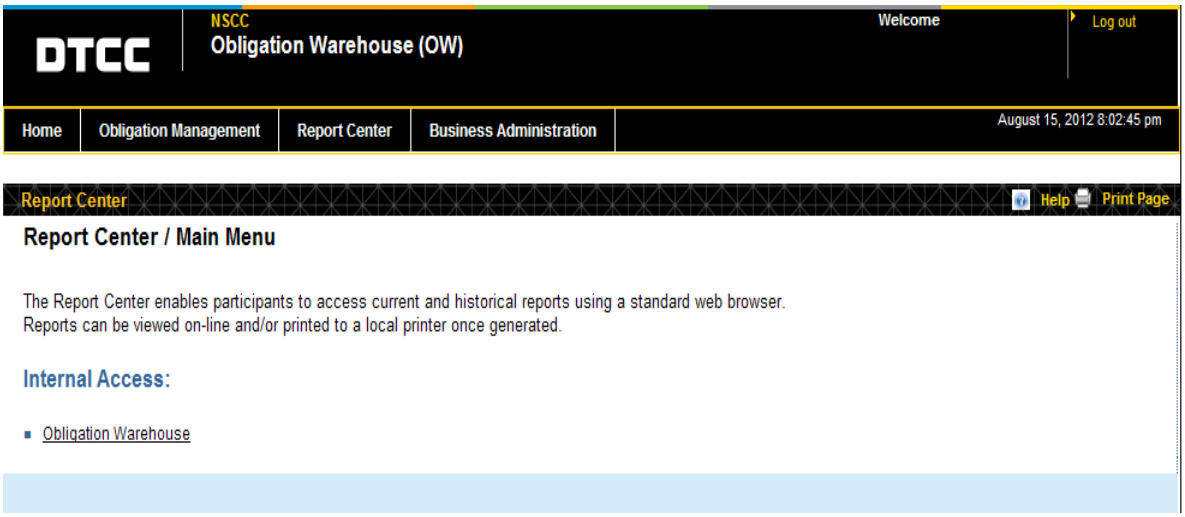

Figure 17.24.2 – Report Center Main Menu

3. The Report Center Main Menu page is displayed. Click Obligation Warehouse.
4. Links to the Obligation Warehouse reports available.

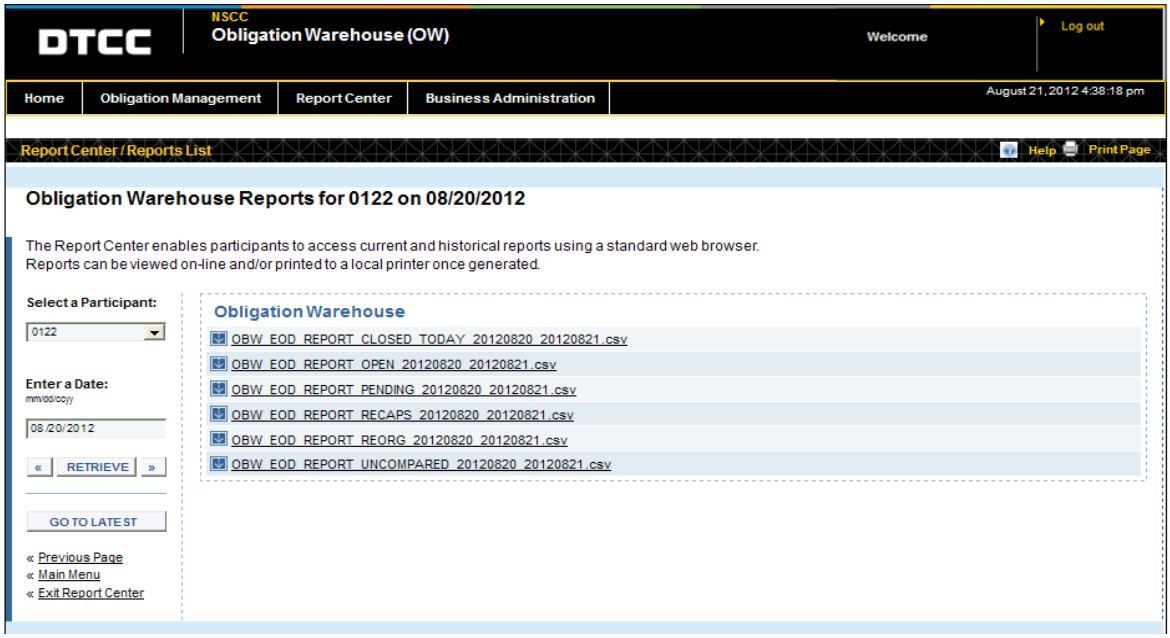

Figure 17.24.3 – Report Center, menu of available reports, by date

5. Select the report you wish to view.

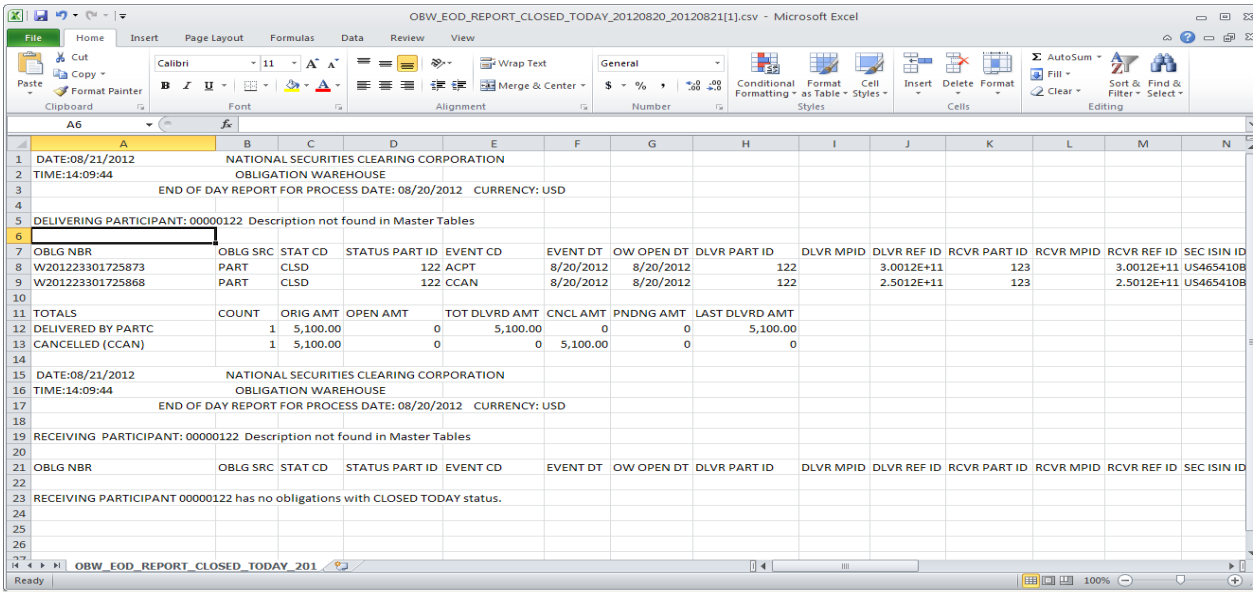

Figure 17.24.4 – Display of Obligation Warehouse End of Day Position Report, Open Today Section

6. All the reports are available in an Excel format. Click the hyperlink to open.
7. The report can be saved to your desktop as an Excel file or printed.

In the event of a Pair off, a Pair off report will be created and appear on the Obligation Warehouse Web Report Center at the time of distribution.

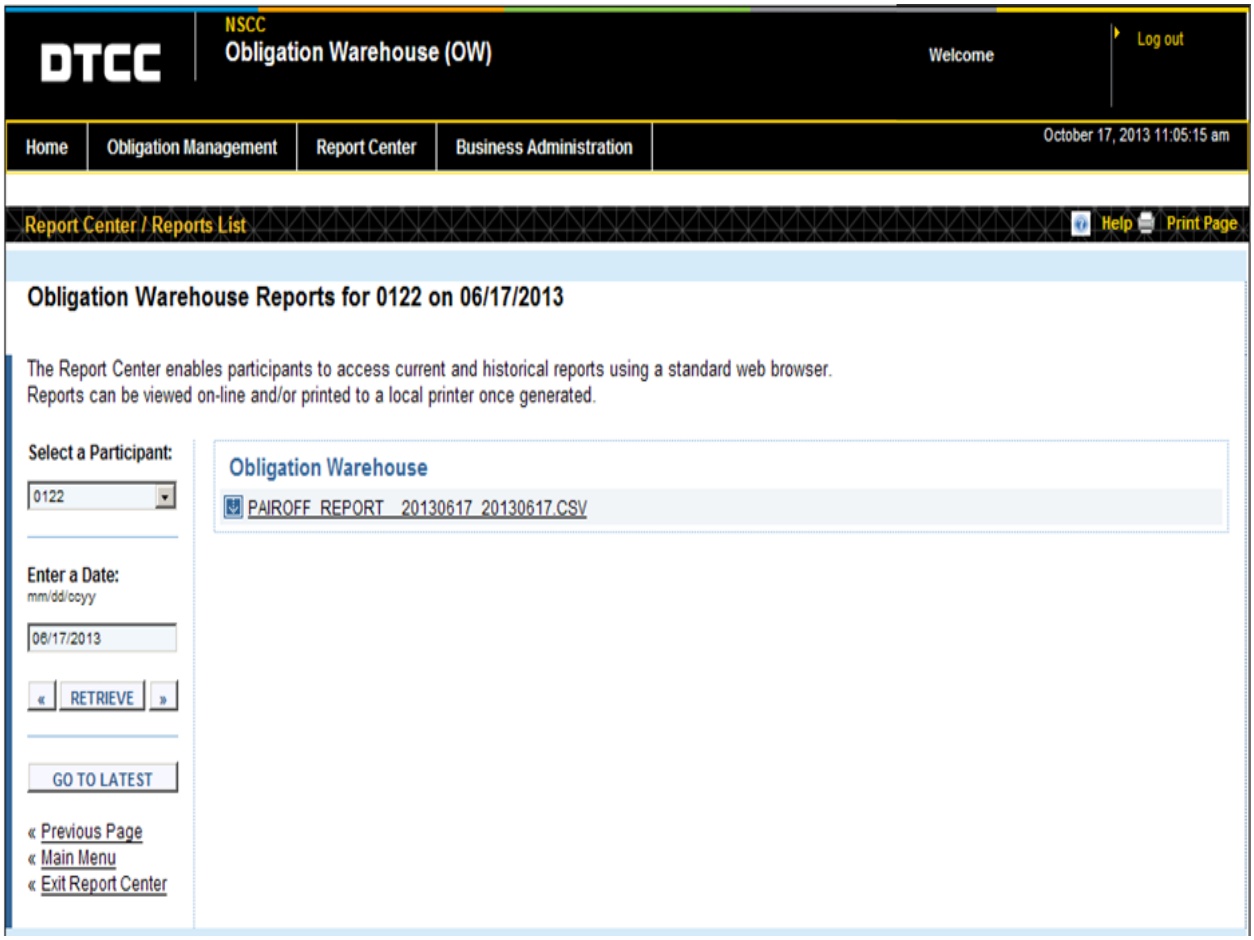

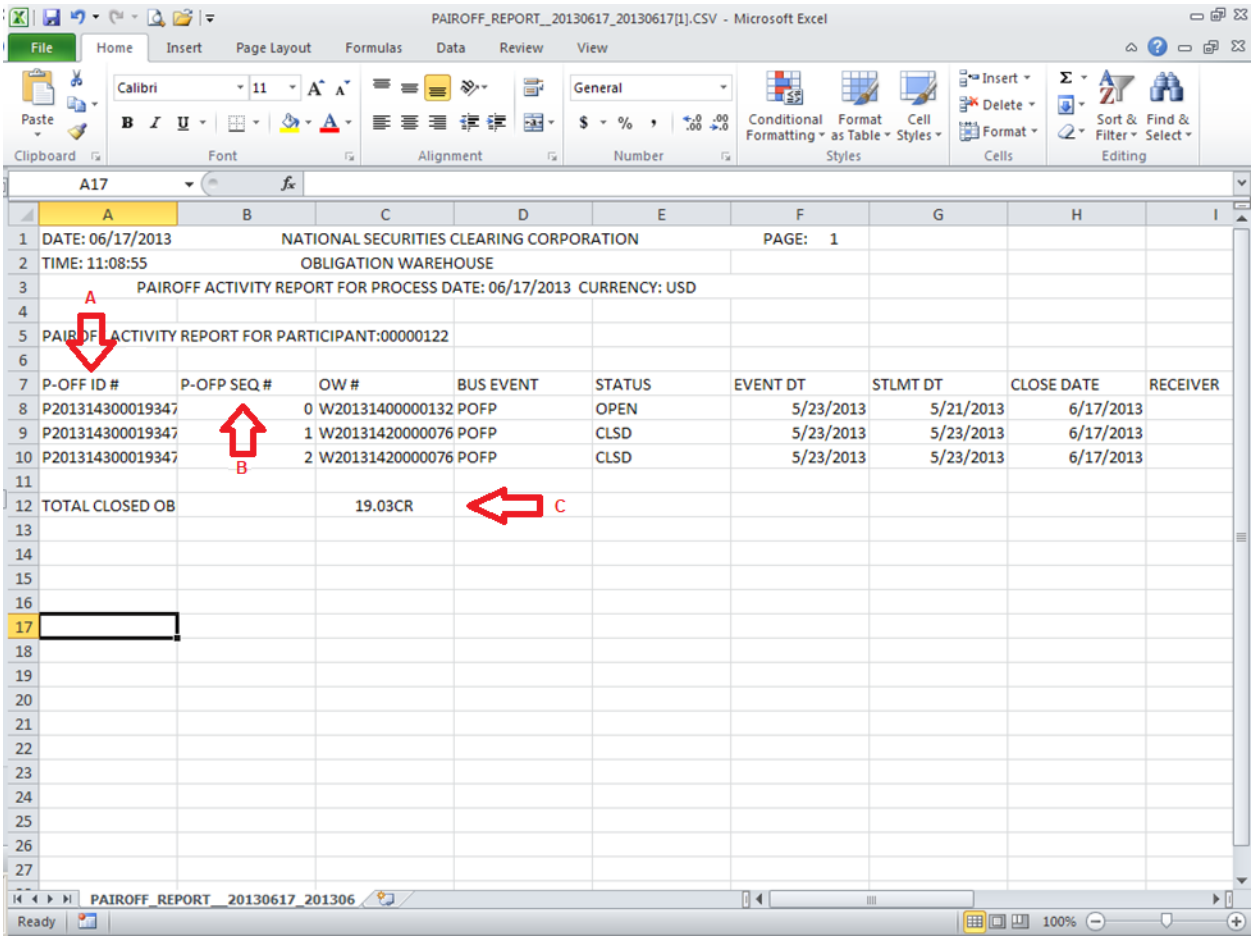

Figure 17.24.5 – Display of Obligation Warehouse Pair Off Report

The Pair Off Activity report will provide the details of what obligations were included in the pair off processing. The report is in a format that can easily be downloaded into Excel. The sequence numbers indicate the order of closure against the main obligation.

The following is an example report with the letters corresponding to each label below.

A. Each obligation closed also is tagged with the same Pair Off Control Number (P-OFF ID Number) so the grouping of many securities can be maintained.
B. In the example above the Pair Off included an obligation which was decremented as multiple obligations were paired against it. The two sequence events (P-OFP SEQ Number) which are in numerical order are below the main obligation.
C. The result of the Pair Offs created a credit balance of $19.03.

17.24 Account Level Pair Off Function

Once an account is designated as Account Level Pair Off, then all obligations submitted to Obligation Warehouse will be set to Pair Off = YES. Only matched obligations have the Pair Off indicator set to yes.

The Account Level Pair Off indicator needs to be established one time and will continue being applied until modified or deleted. Note the Account Level Pair Off designation requires a two levels of approval.

The Super Access Coordinator at each firm has the authorization to assign one or two persons the ability to access the Pair Off Account Level menu. Once the CRE entitlements have been updated by the Super Access Coordinator, the menu will be available only to that login id.

Use the Business Administration menu, located on the top bar of Obligation Warehouse Web, to access the Pair Off Account Level feature. Select View/ Add/ Modify Pair Off.

Figure 17.25.1 – Account Level Pair off View/ Add/ Modify menu

Identify the NSCC Account number where an authorized approver wants to view and possibly change the Account Level Pair Off Indicator.

Populate the effective date to define when Obligation Warehouse will begin applying the Account Level Pair Off.

A different user at the same firm with the entitlement of “Approver” can accept the Account Level changes. Once completed the Pair Off indicator will be adjusted going forward. The Pair Off indicator will not be changed on existing obligations in the database. Only new submissions beginning on the day the Account Level Pair Off is introduced will be changed.

Members who elect to have all obligations automatically updated to Include for Pair off can use the Account Level Pair off functionality found in the Business Administration menu of the Obligation Warehouse Web.

Once the Super AC has assigned the role to the designated individual, the user will request the Account Level Pair off action, with a future effective date.

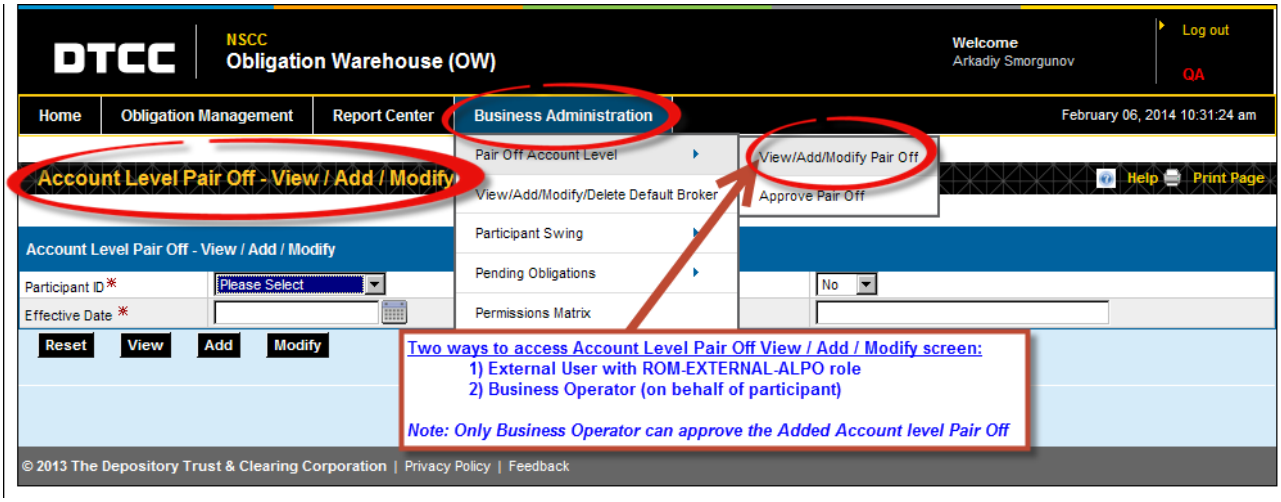

Figure 17.25.2 – Account Level Pair off menu.

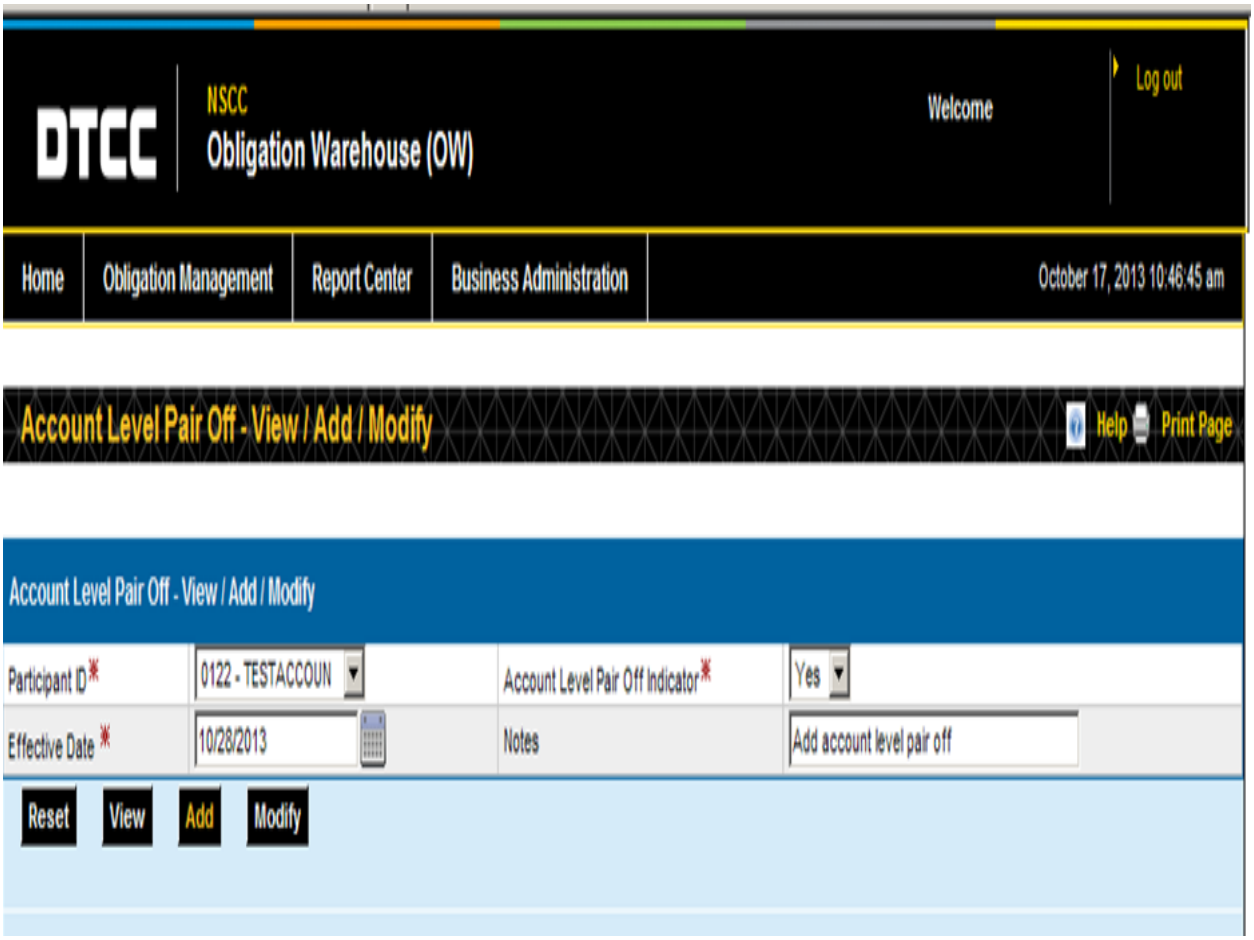

Figure 17.25.3 – Account Level Pair off View/ Add/ Modify men

On the screen above the authorized user is requesting that Account Level Pair Off indicator be set to include all obligations. The effective date must be in the future.

When a firm has completed the request, they should contact DTCC Client Support at 1-888-382-2721 option 2, option 4 to ask for secondary level approval by DTCC.

A DTCC user who has approval authority is required to enter Obligation Warehouse Web, pull down the Business Administration menu for “Pair Off Account Level” and select Approve Pair Off.

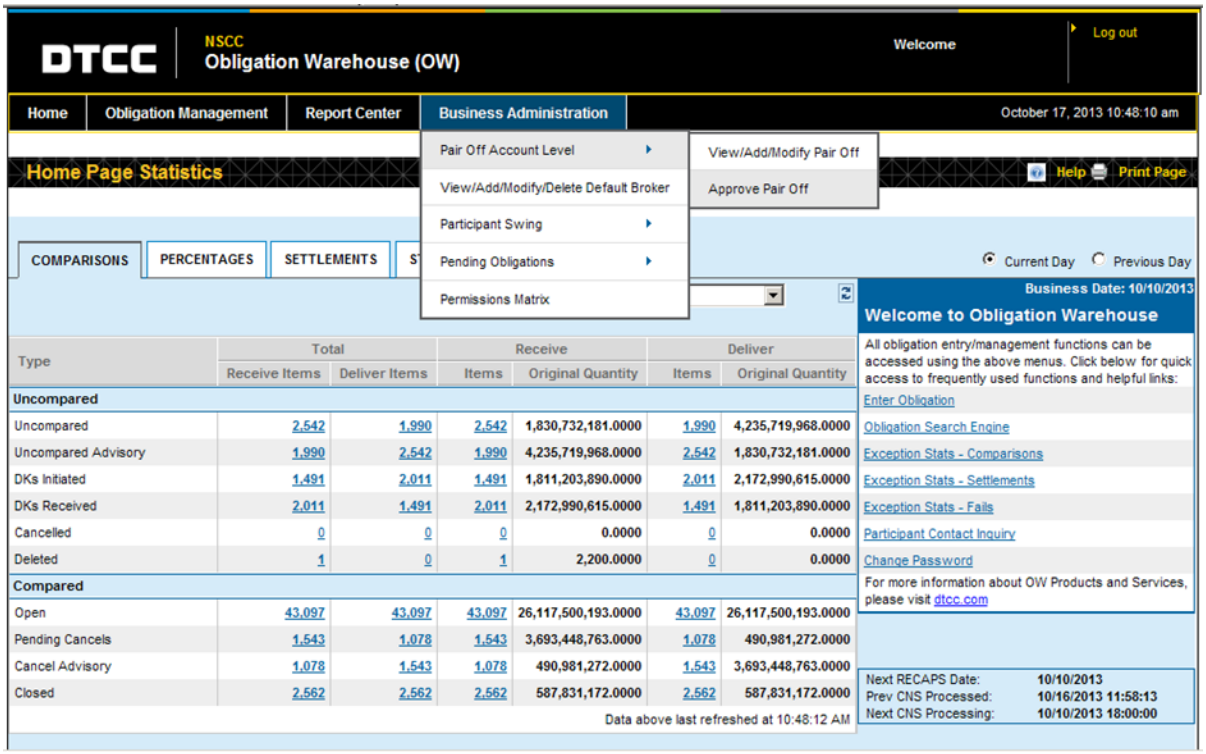

Figure 17.25.4 – Account Level Pair off Approval by DTCC

The DTCC user will access the Account Level Pair Off menu on Obligation Warehouse Web in the Business Administration tab. Select Approve Pair off. The pending approval screen will be returned which displays all accounts where the Account Level Pair off process has been modified by a firm user. The DTCC Operations user must have Approval authorization to complete this process.

The list of accounts where a approval is pending displays the effective date of the request with the name of who requested and the time submitted. The DTCC Operations approver then submits the approval.

All requests for Account Level Pair off and the Approval date must be for a future business date.

Account Level Approvals updates to the entire obligation database of the firm activating the new Pair Off indicator on the effective date.

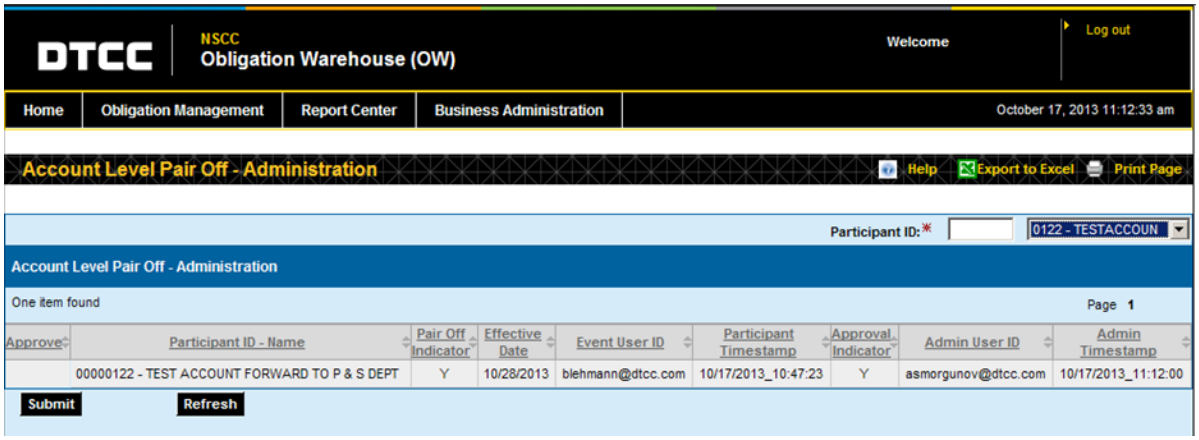

Figure 17.25.5 – Account Level Pair off Approval by DTCC

Starting on the effective date after the 10:00 ET update, every new obligation accepted into Obligation Warehouse from the automated loads sources of ACATS/ ECATS/ FCATS; CNS Exits, and NSCC Balance Orders will have the Account Level Pair Off Indicator reflecting the value requested. MQ messages will be generated for any obligation where the Obligation Warehouse Pair off indicator was changed.

Upon completion of the Account Level Pair Off approval the green banner denoting success appears.

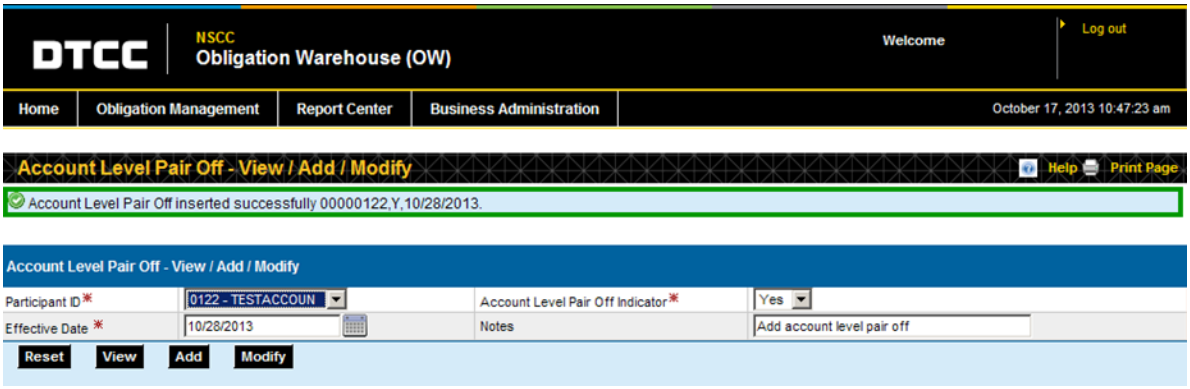

Figure 17.25.6 – Account Level Pair off Approval by DTCC completed successfully

If an account is designated by the Account Level Pair Off with the Include for Pair Off (Pair Off = YES); individual obligations can be modified to reverse the account level action. In this example, a modification of the Pair Off indicator can be entered either through Obligation Warehouse Web or submitted through MQ messaging to Exclude for Pair Off (Pair Off = NO).

17.25 Obligation Warehouse Participant Contact List

The Participant Contact screen is provided for use by NSCC participants to maintain contact information for the responsible parties at their firm. The benefit to keeping current relevant information on the application is the efficient use of time in problem resolution situations.

1. Access the Participant Contact list by selecting from the Main Menu, Obligation Management, or the quick link on the right side of the Home page.

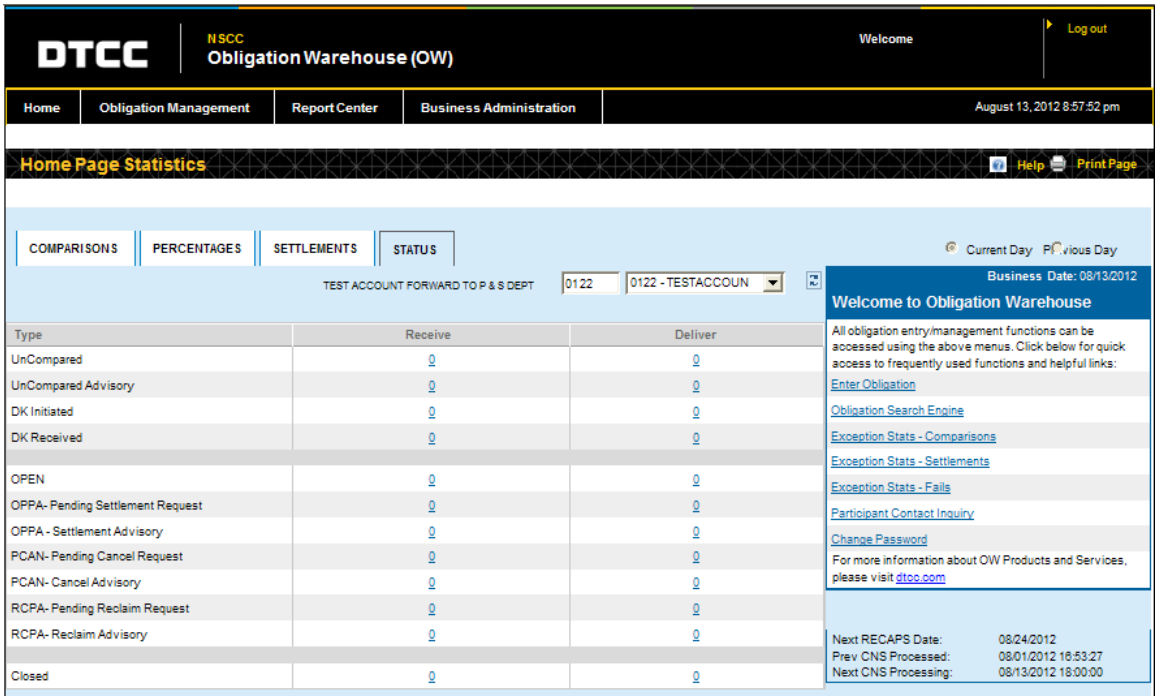

Figure 18.25.1 – Home page, Obligation Management, Participant Contact

All Obligation Warehouse Members are displayed.

Click the telephone icon to view the participant contact for that Obligation Warehouse Member.

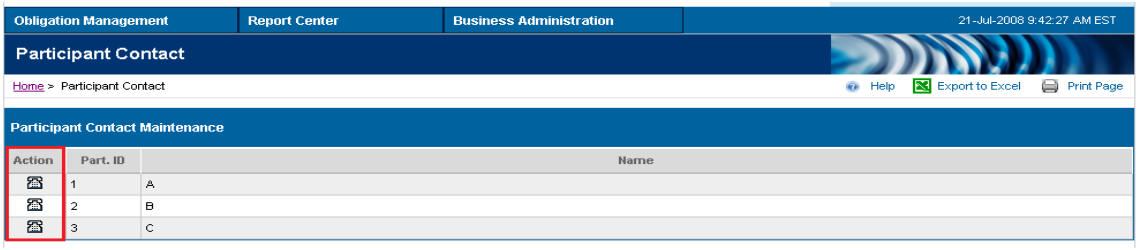

Figure 17.25.2 – Participant Contact, Participant list

2. Click the phone icon to view the participant profile

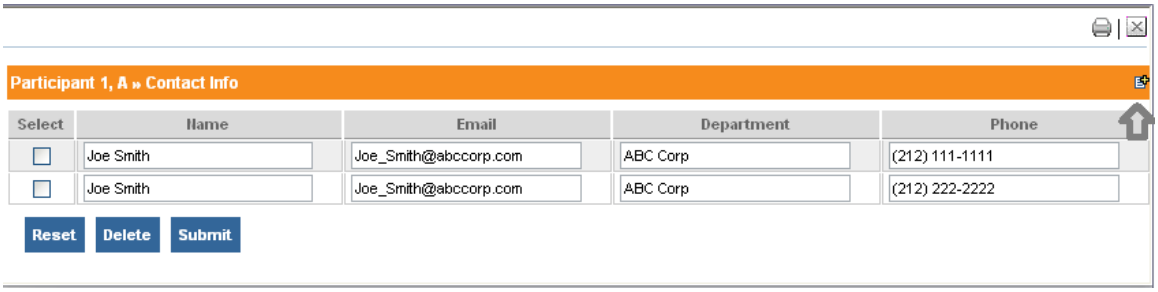

Figure 17.25.3 – Participant Contact screen

3. The Add line icon will allow you to add a name, email, department and phone number for individuals at your firm. Click Update and a Success screen will confirm the input.

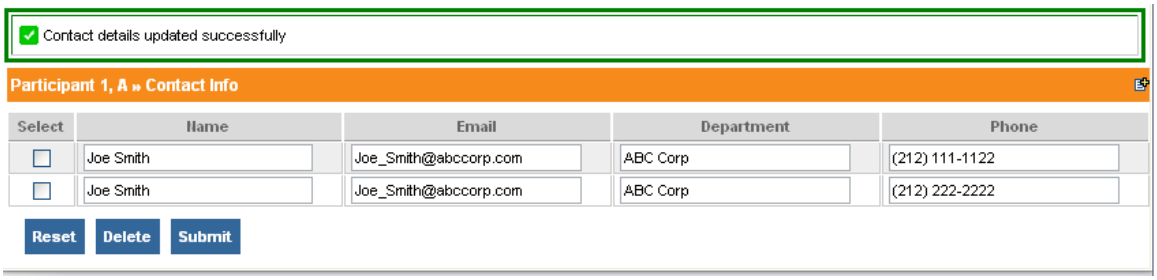

Figure 17.25.4 – Participant Profile Maintenance Success screen

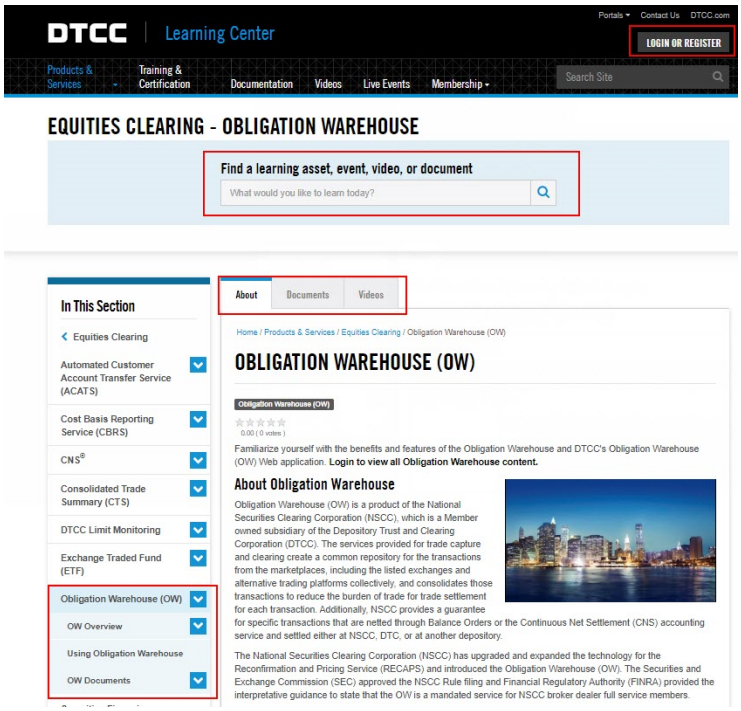

A best practice suggestion is to maintain an accurate participant contact list for your firm at all times.

17.26 Obligation Warehouse Web Help

From the Obligation Warehouse Web, access help at any time by clicking the Help icon in the upper right hand corner.

The Help icon directs you to the DTCC Learning website where you can access this user guide and other content in the Obligation Warehouse section. To view all of the available content, click **Login Or Register** at the top of the page. Enter your DTCC Learning Center login (business email) and password. If you do not have a login and password, click **Create account**.
